<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	World Energy Outlook	1
1.2	The Waste Debate	4
1.3	Waste as a Resource of Energy	5
1.4	Basics of Thermochemical Waste-to-Energy Technologies	7
1.4.1	Pyrolysis	8
1.4.2	Gasification	8
1.4.3	Plasma Arc Gasification	9
1.4.4	Hydrothermal Liquefaction	9
1.5	Current Obstacles to WtE Plants Deployment	10
1.6	Aims of the Thesis	12
1.7	Methodology	13
1.7.1	Operation of Fluidised Bed Reactors on Waste Fuels	14
1.7.2	Plasma for Treatment of Ashes and Gases	14
1.7.3	Performance Analysis of Two-Stage Versus Single Stage Processes	14
1.7.4	Reforming Mechanisms of Tars and Organic Sulphur Compounds in Plasma Environment	15
1.7.5	Partitioning and Chemistry of Inorganic Components in the Solid Phase	15
1.8	Thesis Outline	15
	References	17
<b>2</b>	<b>Gasification of Waste Derived Fuels in Fluidized Beds:</b>	
	<b>Fundamental Aspects and Industrial Challenges</b>	<b>19</b>
2.1	Fuel Characterization	20
2.1.1	Fuel Preparation	20
2.1.2	Component Materials	22
2.1.3	Organic Content	22
2.1.4	Ash Content and Composition	26
2.1.5	Moisture Content	27

2.1.6	Element Content . . . . .	28
2.1.7	The Energy Value of RDF . . . . .	30
2.1.8	Preliminary Considerations Based on Fuel Characterization. . . . .	31
2.2	Fluidized Bed Gasification: Process Overview . . . . .	33
2.2.1	Material in-Feeding . . . . .	35
2.2.2	Heating and Drying . . . . .	36
2.2.3	Devolatilization and Volatile Conversion . . . . .	36
2.2.4	Fixed Carbon Conversion . . . . .	37
2.2.5	Particle Attrition and Elutriation . . . . .	38
2.2.6	Comparison Between Conventional and Waste Fuels . . . . .	39
2.3	Ash Behaviour and Agglomeration Issues . . . . .	40
2.3.1	Mechanism . . . . .	41
2.3.2	Effect of Temperature and Segregation Profiles. . . . .	41
2.3.3	Effect of RDF Ash Composition . . . . .	42
2.3.4	Entrainment, Slagging and Fouling . . . . .	44
2.3.5	Use and Disposal of Solid Residues . . . . .	45
2.4	Tar Formation and Reduction Measures . . . . .	47
2.4.1	Tar Definition and Formation . . . . .	48
2.4.2	Effect of Temperature . . . . .	50
2.4.3	Effect of Equivalent Ratio and Steam . . . . .	51
2.4.4	Effects of Residence Time. . . . .	52
2.4.5	Effect of Active Materials . . . . .	53
2.4.6	Physical Tar Reduction Measures . . . . .	54
2.4.7	Thermal and Plasma Cracking. . . . .	57
2.5	Remarks and Conclusions. . . . .	58
	References. . . . .	60
<b>3</b>	<b>Plasma as an Alternative Way to Gas Reforming and Ash Disposal. . . . .</b>	<b>65</b>
3.1	Plasma Principles . . . . .	65
3.2	Plasma in Hydrocarbon Processing Applications . . . . .	66
3.2.1	Non-thermal Plasmas . . . . .	67
3.2.2	Thermal Plasmas. . . . .	71
3.3	Plasma-Chemical Conversion of Tars into Syngas ( $\text{CO}_2\text{-H}_2$ ) and Other Hydrogen Rich Mixtures . . . . .	72
3.3.1	Kinetics in Plasma Chemistry . . . . .	74
3.3.2	Reactions in $\text{CO}_2$ , $\text{H}_2\text{O}$ , $\text{H}_2$ . . . . .	76
3.3.3	Cooling and Quenching . . . . .	77
3.4	Ash Vitrification and Material Recovery. . . . .	77
3.5	Coupling the Plasma with the FBG: The Gasplasma Process . . . . .	80
3.5.1	Process Overview . . . . .	81
3.5.2	Comparison of Wet Gas Cleaning and Plasma Gas Processing Systems. . . . .	84

3.6	Remarks and Conclusions. . . . .	88
3.7	Current Issues and Refined Objectives of the Thesis . . . . .	88
	References. . . . .	90
<b>4</b>	<b>Apparatus and Investigative Approach . . . . .</b>	<b>93</b>
4.1	Plant Overview. . . . .	94
4.2	The Experimental Set-up . . . . .	95
4.2.1	The Fluidized Bed Gasifier . . . . .	95
4.2.2	The Plasma Converter. . . . .	99
4.2.3	Containment and Tapping of Molten Products . . . . .	101
4.2.4	Gas Cooling System . . . . .	102
4.2.5	Dry Gas Cleaning . . . . .	104
4.2.6	Wet Gas Cleaning. . . . .	104
4.2.7	Syngas Utilization. . . . .	104
4.3	Sampling and Analysis. . . . .	105
4.3.1	Off-Gas Continuous Emissions Monitoring . . . . .	106
4.3.2	Syngas Calorific Value . . . . .	109
4.3.3	Tar and Organic Sulphur Sampling and Analysis . . . . .	109
4.3.4	Solid Analysis and Residues Characterization. . . . .	110
4.4	Plant Operation. . . . .	114
4.4.1	Start up . . . . .	115
4.4.2	Normal Operation . . . . .	115
4.4.3	Shut Down . . . . .	116
4.4.4	Test Materials and Conditions. . . . .	117
<b>5</b>	<b>Modelling of a Two-Stage Process: Comparison of Different Approaches and Performance Analysis . . . . .</b>	<b>121</b>
5.1	Introduction . . . . .	121
5.2	Single Versus Two-Stage Process. . . . .	123
5.3	Process Modelling . . . . .	125
5.3.1	Kinetic Models . . . . .	125
5.3.2	Kinetic Model Formulation . . . . .	126
5.3.3	CFD Integration . . . . .	131
5.3.4	Thermodynamic Models . . . . .	132
5.3.5	Thermodynamic Equilibrium Formulation. . . . .	133
5.4	Results and Discussion. . . . .	138
5.4.1	Experimental Validation of Kinetic Model Data: Single Versus Two-Stage Process. . . . .	139
5.4.2	Experimental Validation of Thermodynamic Model Data: Single Versus Two-Stage Process. . . . .	143
5.5	Performance Analysis. . . . .	148
5.5.1	First Law Efficiency . . . . .	150
5.5.2	Plasma Versus Secondary Oxygen . . . . .	151
5.5.3	Second Law Efficiency . . . . .	155

5.6 Conclusion .....	157
