

Contents

1	Introduction	1
1.1	Big Network Data	1
1.2	Online Challenge	2
1.3	Offline Challenge	2
1.4	Fundamental Primitives	3
1.5	Scalable Counter Architectures for Per-Flow Size Measurement	4
1.6	Hyper-Compact Virtual Estimators for Per-Flow Cardinality Measurement	4
1.7	Memory-Efficient Estimators for Persistent Spread Measurement	6
1.8	Outline of the Book	7
	References	8
2	Per-Flow Size Measurement	11
2.1	Problem Statement	11
2.2	Prior Art	13
2.3	Design of Counter Tree Architecture	14
2.3.1	Motivation	14
2.3.2	Two-Dimensional Counter Sharing	15
2.3.3	Counter Tree Architecture	17
2.3.4	Counting Range	19
2.3.5	Design Overview	20
2.4	Online Packet Recording	20
2.4.1	Recording	20
2.4.2	Number of Memory Accesses	21
2.5	Counter Tree-Based Estimation	23
2.5.1	CTE Method	23
2.5.2	Analysis of $\hat{s}$	25
2.6	Counter Tree-Based Maximum Likelihood Estimation	26
2.6.1	CTM Method	26
2.6.2	Analysis of $\hat{s}$	28

2.7	Enhanced Counter Tree Architecture	29
2.7.1	Motivation	29
2.7.2	Counters with Status Bits	30
2.7.3	Recording and Estimation	31
2.8	Experimental Evaluation	32
2.8.1	Experiment Setup	32
2.8.2	Processing Time for Recording a Packet	33
2.8.3	Estimation Accuracy and Range	33
2.8.4	Impact of b , r , and d	37
2.8.5	Comparison of CTE and E-CTE	38
2.8.6	Scalability of Counter Tree	40
2.9	Summary	41
	References	44
3	Per-Flow Cardinality Measurement	47
3.1	Problem Statement	47
3.2	Prior Art	48
3.2.1	Hash Table and Bitmap	48
3.2.2	MultiResolutionBitmap and PCSA	48
3.2.3	LogLog and HyperLogLog	50
3.2.4	Performance Summary	51
3.3	Register Sharing and Virtual Estimators	53
3.3.1	Motivation	53
3.3.2	Sharing at Bit Level?	53
3.3.3	Register Sharing and Virtual Estimators	54
3.3.4	Counter Sharing for Flow Size—A Different Problem	55
3.4	A Framework for Virtual-Estimator Solutions	56
3.5	Virtual HyperLogLog Estimator	58
3.5.1	Record Flow Elements in Virtual Estimator	59
3.5.2	Flow Cardinality Estimation	59
3.6	Estimation Bias and Variance	60
3.6.1	Estimation Bias	61
3.6.2	Estimation Variance	62
3.6.3	Relative Standard Error	63
3.7	Experimental Evaluation	65
3.7.1	Estimation Accuracy in Tight Memory	65
3.7.2	Impact of Value s on vHLL	69
3.7.3	Impact of Overall Traffic	71
3.7.4	A Case Study: Detect Super Destinations	72
3.8	Summary	74
	References	75

4 Persistent Spread Measurement	77
4.1 Problem Statement	77
4.2 Preliminary Solutions	80
4.2.1 Hash Table Solutions	80
4.2.2 Bitmap-Based Method	81
4.3 Estimator Based on Intersection Bitmap	82
4.3.1 Analysis of Real Network Traces	82
4.3.2 Persistent Spread Estimator	84
4.4 Analysis of Bitmap-Based Estimator	87
4.5 Multi-Virtual Bitmap Estimator	89
4.5.1 Physical Bitmap Encoding	91
4.5.2 Persistent Spread Estimation	92
4.6 Simulation Evaluation	93
4.6.1 Experiment Setup	94
4.6.2 Estimation Accuracy and Operating Range	95
4.6.3 Impact of Time Period t on Accuracy	97
4.6.4 Impact of Signal-to-Noise Ratio SNR_t on Accuracy	98
4.7 Related Work	99
4.8 Summary	101
References	103

Traffic Measurement for Big Network Data

Chen, S.; Chen, M.; Xiao, Q.

2017, VII, 104 p. 45 illus., 2 illus. in color., Hardcover

ISBN: 978-3-319-47339-0
