|                                                                |           |
|----------------------------------------------------------------|-----------|
| <b>1 Principles of Optical Fiber Sensing .....</b>             | <b>1</b>  |
| 1.1 Intensity.....                                             | 4         |
| 1.1.1 Microbending .....                                       | 5         |
| 1.1.2 Evanescent Field .....                                   | 5         |
| 1.1.3 Two Fiber Coupling .....                                 | 6         |
| 1.2 Phase Interferometer .....                                 | 7         |
| 1.2.1 Mach Zehender .....                                      | 8         |
| 1.2.2 Michelsen.....                                           | 10        |
| 1.2.3 Fabry Perot Interferometer.....                          | 11        |
| 1.2.4 Sagnac Interferometer.....                               | 12        |
| 1.3 Wavelength.....                                            | 13        |
| 1.3.1 Fiber Bragg Gratings.....                                | 14        |
| 1.3.2 Fluorescence .....                                       | 15        |
| 1.4 Polarization .....                                         | 15        |
| 1.5 Distributed OFS .....                                      | 16        |
| 1.5.1 Brillouin .....                                          | 17        |
| 1.5.2 Rayleigh .....                                           | 18        |
| 1.5.3 Raman .....                                              | 19        |
| 1.6 Summary .....                                              | 19        |
| References .....                                               | 20        |
| <b>2 Silica Optical Fiber Sensors Production Methods .....</b> | <b>25</b> |
| 2.1 Intensity Sensors .....                                    | 26        |
| 2.1.1 Production Methods .....                                 | 26        |
| 2.1.2 Typical Sensing Applications.....                        | 28        |
| 2.2 Phase Interferometer Sensors.....                          | 30        |
| 2.2.1 Production Methods .....                                 | 30        |
| 2.2.2 Typical Sensing Applications.....                        | 31        |
| 2.3 Wavelength Sensors .....                                   | 33        |
| 2.3.1 Production Methods .....                                 | 33        |
| 2.3.2 Typical Sensing Applications.....                        | 36        |

|          |                                                                          |           |
|----------|--------------------------------------------------------------------------|-----------|
| 2.4      | Polarization Sensor .....                                                | 38        |
| 2.4.1    | Production Methods .....                                                 | 39        |
| 2.4.2    | Typical Sensing Applications.....                                        | 39        |
| 2.5      | Distributed Optical Fiber Sensors .....                                  | 40        |
| 2.5.1    | Production Methods .....                                                 | 41        |
| 2.5.2    | Typical Sensing Applications.....                                        | 43        |
| 2.6      | Summary .....                                                            | 44        |
|          | References.....                                                          | 45        |
| <b>3</b> | <b>Low Cost Silica Optical Fiber Sensors .....</b>                       | <b>49</b> |
| 3.1      | Cost-Effective OFS .....                                                 | 51        |
| 3.2      | Cost-Effective FBGs .....                                                | 52        |
| 3.3      | Fiber Optic Gyroscope (FOG)—A Cost Effective<br>Application of OFS ..... | 53        |
| 3.4      | Distributed OFS .....                                                    | 54        |
| 3.5      | Interferometric Sensors .....                                            | 55        |
| 3.6      | Summary .....                                                            | 57        |
|          | References.....                                                          | 58        |
| <b>4</b> | <b>Polymer Optical Fiber Sensors .....</b>                               | <b>61</b> |
| 4.1      | Introduction to POF .....                                                | 61        |
| 4.2      | POF Characteristics .....                                                | 62        |
| 4.3      | POF Sensing Mechanisms and Applications .....                            | 64        |
| 4.3.1    | Intensity.....                                                           | 65        |
| 4.3.2    | Interferometry .....                                                     | 67        |
| 4.3.3    | Distributed Sensing .....                                                | 68        |
| 4.3.4    | FBGs in POF.....                                                         | 68        |
| 4.3.5    | Microstructure POF Sensors .....                                         | 69        |
| 4.4      | Summary .....                                                            | 70        |
|          | References.....                                                          | 70        |
| <b>5</b> | <b>Optical Fiber Sensors in IoT.....</b>                                 | <b>73</b> |
