1	Introduction	1
	References	3
 Part I Bioengineering and Animal Stem Cells		
2	Current Status and Perspectives in Stem Cell Research: The Concept of Normal Stem (NSC) and Cancer Stem Cell (CSC)	7
2.1	Introduction	7
2.2	Stemness, Migration, Circulation, and Seeding	8
2.3	Mobilization	8
2.4	Similarities and Differences Between Embryonic and Adult Stem Cells	9
2.5	Similarities and Differences Between Normal and Cancer Stem Cell	9
2.6	Resume Based upon Similarities and Differences Between NSCs and CSCs	10
2.7	What and Which Molecular Markers of CSCs We Know Today?	11
2.8	Isolation of CSCs Using Magnetic Beads	11
2.9	Theories of Origin of CSCs	11
2.10	Current Tests for Determination of the Presence of CSCs	12
2.11	Sorting and Isolation of CTC Using the Method of Magnetic Levitation	12
2.12	The Emergence/Origin and Development of CSC: Mechanisms	13
2.13	Aberrant Methylation	13
2.14	What Do We Need to Do with the Sum of Information?	14
2.15	How Was the Concept of CSC Therapy Designed?	14
	References	14

3	Essential Characteristics of Stem Cells: Self-renewal, and Plasticity	17
3.1	The Nature of Stem Cells	17
3.2	Self-renewal and Its Significance for Stem Cells.	18
3.3	Plasticity/Pluripotency of Animal Stem Cells and Its Mechanisms	19
3.4	Other Features of Significance	19
	References.	20
4	Stem Cell Sources and Types of Animal Stem Cells	23
4.1	Introduction	23
4.2	Embryonic SCs (ES or ESC)	23
4.3	Fetal Stem Cells (FSC).	24
4.4	Bone Marrow and Other Adult Stem Cells Sources	24
	References.	26
5	Stemness and Stem Cell Markers	27
5.1	Introduction	27
5.2	Human Embryonic Stem Cell Markers and Pluripotency	28
5.3	Fetal Stem Cell Markers	29
5.4	Cord Blood Stem Cell Markers.	30
5.5	Placental Stem Cell Markers.	30
5.6	Adult Stem Cell Markers	30
	References.	31
6	Stem Cell Signaling Molecules and Pathways	33
6.1	Introduction	33
6.2	ESC-Wnt Signaling.	35
6.2.1	Significant Discoveries in Wnt	35
6.3	Notch Signaling	37
6.4	The Human Hedgehog Signaling	37
6.5	TGF-Beta Signaling	37
6.6	Signaling Mechanisms in Adult Human Cells (HSC and MSC).	37
6.7	Pathways in Adult HSC	39
6.8	Pathways in Adult Mesenchymal Stem Cells	39
6.9	Pathways in CSC	40
6.10	The JAK (Janus Kinase)/STAT3 (Signal Transducer and Activator of Transcription) Signal Mechanism.	41
	References.	42

7	Expansion of Stem Cells: Propagation of Animal Stem Cells Ex Vivo (In Culture)	45
7.1	What Is Expansion and What Do We Expect from Expansion?	45
7.2	Basic Concept—Ex Vivo Expansion of Hematopoietic Cells Today	46
7.2.1	Molecules	46
7.2.2	Distinct Stimuli	47
7.2.3	Media for Expansion	47
7.2.4	Hypoxia.	47
	References.	48
8	Stem Cell Pool: What Are the Best Patterns for Cellular Therapy?	51
8.1	Introduction	52
8.2	Organogenesis from Adult Stem Cells and Problems with Different Tissues.	54
8.3	Therapeutic Implications for TCSCs as a New Concept	55
8.4	The Concept of VSEL	56
8.5	The Concept of Mesenchymal Stem Cell (MSC) with Dental Pulp Cells (DPSCs) as an Example	60
8.6	Mobilization as a New Noninvasive Therapeutic Concept.	62
8.7	New Concepts in Adult Stem Cell Research with Development of New Strategies: Personal Experience in the Light of Significance of Growing Information	63
8.7.1	Background and Significance.	63
8.8	Directions and Relevant Studies: We and Others	64
8.9	Optimization of Primitive Stem Cell Patterns for Regeneration and Repair	65
	References.	66
9	Induced Pluripotent Stem Cells (iPSCs) and Nuclear Reprogramming.	71
9.1	Breakthrough: Induced Pluripotent Stem Cells (iPSC)	72
9.1.1	Reprogramming as a Therapeutic Event	72
9.2	Induced Pluripotent Stem Cells (iPSCs) and Nanotechnology: State of the Art.	74
9.3	Nanoparticles for Genetic Reprogramming of Somatic Cells to iPSCs.	75
9.3.1	Poly(Beta-Amino Ester) Nanoparticle-Based Non-viral Protocol.	76
9.3.2	Calcium Phosphate Nanoparticle Based Non-viral Protocol.	77

9.3.3	Polyketal Nanoparticle-Mediated Non-viral, Non-genetic Approach for Delivery of Mature MicroRNAs.	77
9.3.4	Non-viral Magnetic Nanoparticle Based Transfection.	78
9.3.5	The Impact of iPSC upon the Research and Practical Application.	79
	References.	80
10	Cancer Stem Cell Concept	93
	References.	96
11	Metabolic Reprogramming in Cancer and Metabolic Theory of CSC	99
11.1	Metabolism of CSC: New Explanations and the Old Fundament	99
11.2	Terminology of Energy Metabolism	100
11.3	Coupling of the Respiration with OXPHOX.	102
11.4	Mechanisms of ATP Synthesis	102
11.5	Metabolic Abnormalities in Cancer Cells and Mitochondria	102
11.6	The Hallmarks of Cancer Cell Energy Metabolism: The Warburg Effect and the Crabtree Effect.	105
11.7	Resume: Energy Metabolism in Cancer Cell Compromised?	107
11.8	The Overview on CSC Metabolic Activity	107
11.9	New Cancer Therapy Concept	109
	References.	109
12	Concept of Targeted Cancer Stem Cell Therapy and New Versions	113
12.1	The Idea of Targeted Therapy: Before, Now, and in the Future	113
12.2	Can We Use NSCs in the Therapy of Cancer?	114
12.3	Mitochondria as the Target	114
12.4	Other Targeting Possibilities	114
12.5	New Modalities of Targeted Therapy and Idea of Remote Control	115
12.6	Principles of Targeted Therapy Based on Nanoparticles	115
12.7	What is the Best Way to Kill CSC: New Methods?	115
12.8	Different Combinations of Targeted Therapy	115
12.9	The Use of Electromagnetic Fields for Growth Inhibition of CSC	116
12.10	Cancer and Electromagnetism	116
12.11	Different Principles: Drug Delivery Based upon Nanoparticles of Ferrous Oxide	117

12.12	3D-Printed Tumor Model	117
12.13	Computerized 3D Model for Analysis of Aggregation of Tumorigenic Cells Is Revealing Specialized Behavior and Unique Cell Types Which Accelerate the Aggregation Process	118
12.14	Possible Mechanisms of Tumor Cellular Heterogeneity: Mediated Coalescence?	118
12.15	Summary	118
12.16	Conclusions	119
12.17	A Look Ahead; What Does the Future Say?	120
	References.	121
13	HLA Typization Choice of Donors: Match or Match Me Not	125
13.1	Distinction Between HLA and MSH Genes Molecules and Functions	125
13.1.1	HLA (H-Histocompatibility Locus Antigen)	125
13.1.2	MHC (Major Histocompatibility Complex)	125
13.1.3	HLA Genes	126
13.1.4	MHC Genes.	126
13.1.5	Polygeny and Polymorhysm of MHC	126
13.1.6	The Mechanism of Gene Rearrangement Is Contributing to and Allowing for Antigen Diversity	128
13.1.7	Transplantation Needs Matching to Support Engraftment.	128
	References.	129
14	Engraftment: Homing and Use of Genetic Markers	131
14.1	What is Engraftment/Homing?	131
14.2	Genetic Markers	131
	References.	132
15	Nanotechnology in Stem Cell Research	133
15.1	Nanotechnology/Nanoparticles	133
	References.	134
16	Stem Cell Therapy: Optimization, Regeneration, Reprogramming, Expansion, Tissue Engineering	137
16.1	Optimization of the Pattern for Stem Cell Treatment	137
16.2	Regeneration in Animals and Humans	137
16.3	Nuclear Reprogramming as One of the Methodological Modalities to Get iPSC.	138
16.4	Significance of Expansion.	138
16.5	Stem Cell as a Part of TE Triangle.	138
	References.	139

17	What Are Positive Results of Stem Cell Therapies?	141
17.1	An Overview of Some Disease States in Which Stem Cells Could Help	141
17.2	Heart Attack	142
17.2.1	Optimization of the Stem Cell Source for Intracoronary Grafting	142
17.3	Physically Induced Injury of Neural Tissues	143
17.4	Degenerative Injuries	144
17.5	Persistent Disease States	146
17.6	Concerns with Stem Cells	147
17.7	The Recovery of the Five Senses with Stem Cells: Are the Concepts Realistic?	148
17.8	Conclusions	151
	References	152
18	Topic Novelties in Animal Stem Cell Research	163
18.1	Biomagnetism, Electromagnetism, and Biophotonics	163
	References	164
19	Resume	165
19.1	The Directions in Animal Stem Cell Research Development Require Further Work	165
19.2	Quo Vadis?	167
	References	167
