<b>1</b>	<b>Basis for Sound-Based Assistive Technology</b>	<b>1</b>
1.1	Background of Assistive Technology	1
1.1.1	Towards a Super-Aged Society	3
1.2	Roles of Sound in Assistive Technology	11
1.3	Structure and Functions of the Auditory System	13
1.3.1	External Ears	13
1.3.2	Middle Ear	14
1.3.3	Mechanism of Frequency Analysis in the Internal Ear	15
1.3.4	Hair Cells and the Auditory Nerve System	17
1.4	Mechanism of Speech Production	23
1.4.1	Structure of the Speech Organ	23
1.4.2	Resonances Inside the Vocal Tract	26
1.4.3	Speech Production Model	28
1.5	Maximum Transmitted Information by Human Senses	30
1.5.1	Category Decision Test and Channel Capacity	30
1.5.2	Maximum Transmitted Information for Multiple Stimulation	32
1.6	Recognition Time Difference Among the Tactile, Auditory and Visual Senses	34
1.7	Language Area and the Speech Chain in the Human Brain	38
	References	40
<b>2</b>	<b>Sound Signal Processing for Auditory Aids</b>	<b>43</b>
2.1	Kinds and Characteristics of Hearing Impairment	43
2.2	Auditory Characteristics of the Hearing Impaired	45
2.2.1	Recruitment	45
2.2.2	Combination Tones	46
2.2.3	Speech Articulation Curve	48
2.3	Assistive Methods Using Hearing Aids	50
2.3.1	Presently Available Kinds of Hearing Aids	50

2.4	Digital Hearing Aids. . . . .	51
2.4.1	Speech Processing for Digital Hearing Aids . . . . .	53
2.4.2	Enhancement Methods of Consonant Parts . . . . .	55
2.4.3	Noise Reduction Methods . . . . .	57
2.4.4	Speech Speed and Intonation Conversion Methods. . . . .	63
2.5	Artificial Middle Ears . . . . .	71
2.6	Design of Earthquake Early Warning Chime Based on Auditory Characteristics [17] . . . . .	72
2.7	The Future of Hearing Aids . . . . .	74
	References. . . . .	75
<b>3</b>	<b>Functional Electrical Stimulation to Auditory Nerves . . . . .</b>	<b>77</b>
3.1	Functional Electrical Stimulation . . . . .	77
3.2	Firing Process of Nerves and Electrical Stimulation Methods. . . . .	79
3.2.1	Mechanism of Neural Firing . . . . .	79
3.2.2	Electrical Stimulation of the Auditory Nerves. . . . .	82
3.2.3	Auditory Characteristics by Electrical Stimulation [3]. . . . .	83
3.2.4	Current Distribution Inside the Cochlea . . . . .	86
3.3	Various Approaches to Cochlear Implants . . . . .	87
3.3.1	Electrode Configurations of Cochlear Implants . . . . .	87
3.3.2	Signal Processing for Cochlear Implants (See [3]) . . . . .	90
3.3.3	Configuration of 22-Channel Cochlear Implants . . . . .	96
3.3.4	Speech Recognition by Cochlear Implants . . . . .	99
3.4	Progress in Artificial Hearing [21] . . . . .	100
3.4.1	Improvement in Cochlear Implants . . . . .	100
3.4.2	Other Methods of Cochlear Implants . . . . .	101
3.4.3	Auditory Brainstem Implants . . . . .	102
3.5	Secondary Effects Caused by Electrical Stimulation. . . . .	103
3.6	Basic Concept and Future of Artificial Vision [31]. . . . .	105
3.6.1	Artificial Vision . . . . .	106
3.6.2	Current Artificial Retinas . . . . .	106
3.7	The Future of Artificial Hearing. . . . .	108
	References. . . . .	108
<b>4</b>	<b>Tactile Stimulation Methods for the Deaf and/or Blind . . . . .</b>	<b>111</b>
4.1	A Role of Tactile Stimulation in Sensory Substitutes. . . . .	111
4.2	Basic Characteristics of the Tactile Sense. . . . .	113
4.2.1	Mechanical Receptors . . . . .	113
4.3	Spatial and Temporal Characteristics of the Tactile Sense . . . . .	116
4.3.1	Representation of Spatial Characteristics Based on Psychophysics . . . . .	116
4.3.2	Representation of Temporal Characteristics Based on Psychophysics . . . . .	119
4.3.3	Estimation of Mechanical Impedance of Skin for Designing Sensory Substitutes. . . . .	125

4.4	Tactile Aids for the Deaf and/or Blind . . . . .	127
4.4.1	Conventional Tactile Aids. . . . .	127
4.4.2	Design and Efficacy of the Tactile Vocoder . . . . .	128
4.4.3	Association with Language Cortex . . . . .	132
4.5	Vocal Training via Tactile Sense . . . . .	133
4.6	Auditory Localization Aids. . . . .	138
4.7	The Future of Tactile Display. . . . .	141
	References. . . . .	141
