

Contents

1	Introduction	1
	References	2
2	Iron Rich Iron-Aluminides	3
2.1	Structure	3
2.1.1	Lattice Parameter	5
2.1.2	Long-Range Order and Sublattice Occupancies	5
2.1.3	Phase Transformations	6
2.1.4	Short-Range Order and K-State	7
2.2	Defects	7
2.2.1	Point Defects: Vacancies and Anti-site Atoms	7
2.2.2	Dislocations	10
2.2.3	Anti-phase Domains and Boundaries	11
2.3	Yield Stress Anomaly	11
	References	12
3	Experimental Methods	19
3.1	Composition	19
3.2	Bridgman Method	19
3.3	Sample Cutting and Orientation	21
3.4	Laue Back-Reflection X-Ray Diffraction	23
3.5	Annealing	24
3.6	Atomic Force Microscopy	24
3.6.1	Contact and Tapping Mode	26
3.6.2	Feedback Loop Tuning	27
3.6.3	Sample Preparation	28
3.6.4	In-Situ Deformation	29
3.6.5	Step Fiting Method	32
3.6.6	Drift and Image Alignment	33
3.7	Transmission Electron Microscopy	34
3.7.1	Diffraction Contrast	34
3.7.2	Visibility of Dislocations	36

3.7.3	Kikuchi Line Fitting	36
3.7.4	Stereo Reconstruction	39
3.7.5	Sample Preparation	41
	References.	41
4	Observations of Dislocations and Other Results	45
4.1	Deformation	45
4.2	Order	47
4.2.1	Selected Area Electron Diffraction	47
4.2.2	Anti-phase Domains	49
4.3	Carbide Particles.	49
4.4	Fe–Al ₂₀	52
4.4.1	TEM of Undeformed Material.	52
4.4.2	Wavy Slip	52
4.4.3	Bowtie Structures	55
4.5	Fe–Al ₂₈	59
4.5.1	TEM of Undeformed Material.	59
4.5.2	In-Situ AFM Observations	61
4.5.3	AFM Observations of Samples Deformed at Different Temperatures	61
4.5.4	TEM Observations of Samples Deformed at Diferent Temperatures.	61
4.6	Fe–Al ₄₀	74
4.6.1	Square Dislocation Loops in Undeformed Material.	74
4.6.2	In-Situ AFM Observations	75
4.6.3	TEM Observations of Deformed Sample.	76
5	Discussion	81
5.1	Deformation	81
5.2	Order and Anti-phase Boundaries.	82
5.3	Carbides	82
5.4	Fe–Al ₂₀	86
5.5	Fe–Al ₂₈	88
5.6	Fe–Al ₄₀	90
	References.	90
6	Summary	93
