

Contents

1	Background	1
1.1	Sets in Vector Spaces	1
1.2	Operators	2
1.3	Order	3
1.4	Nets	4
1.5	The Extended Real Line	4
1.6	Functions	5
1.7	Topological Spaces	7
1.8	Two-Point Compactification of the Real Line	9
1.9	Continuity	10
1.10	Lower Semicontinuity	10
1.11	Sequential Topological Notions	15
1.12	Metric Spaces	16
	Exercises	23
2	Hilbert Spaces	27
2.1	Notation and Examples	27
2.2	Basic Identities and Inequalities	29
2.3	Linear Operators and Functionals	31
2.4	Strong and Weak Topologies	34
2.5	Weak Convergence of Sequences	37
2.6	Differentiability	40
	Exercises	44
3	Convex Sets	49
3.1	Basic Properties and Examples	49
3.2	Best Approximation Properties	50
3.3	Topological Properties	60
3.4	Separation	64
	Exercises	66

4	Convexity and Notions of Nonexpansiveness	69
4.1	Nonexpansive and Firmly Nonexpansive Operators	69
4.2	Cocoercive Operators	72
4.3	Projectors onto Convex Sets	74
4.4	Fixed Points of Nonexpansive Operators	76
4.5	Averaged Nonexpansive Operators	81
4.6	Common Fixed Points	85
	Exercises	86
5	Fejér Monotonicity and Fixed Point Iterations	91
5.1	Fejér Monotone Sequences	91
5.2	Krasnosel'skiĭ–Mann Iteration	96
5.3	Iterating Compositions of Averaged Operators	100
5.4	Quasi-Fejér Monotone Sequences	103
5.5	Nonlinear Ergodic Theorems	105
	Exercises	108
6	Convex Cones and Generalized Interiors	111
6.1	Convex Cones	111
6.2	Generalized Interiors	114
6.3	Polar and Dual Cones	122
6.4	Tangent and Normal Cones	125
6.5	Recession and Barrier Cones	128
	Exercises	129
7	Support Functions and Polar Sets	133
7.1	Support Points	133
7.2	Support Functions	135
7.3	Polar Sets	136
	Exercises	137
8	Convex Functions	139
8.1	Basic Properties and Examples	139
8.2	Convexity-Preserving Operations	143
8.3	Topological Properties	149
	Exercises	154
9	Lower Semicontinuous Convex Functions	157
9.1	Lower Semicontinuous Convex Functions	157
9.2	Proper Lower Semicontinuous Convex Functions	160
9.3	Affine Minorization	161
9.4	Recession Function	164
9.5	Construction of Functions in $\Gamma_0(\mathcal{H})$	166
	Exercises	174

10 Convex Functions: Variants	177
10.1 Between Linearity and Convexity	177
10.2 Uniform and Strong Convexity	178
10.3 Quasiconvexity	183
Exercises	185
11 Convex Minimization Problems	189
11.1 Infima and Suprema	189
11.2 Minimizers	190
11.3 Uniqueness of Minimizers	191
11.4 Existence of Minimizers	192
11.5 Minimizing Sequences	195
Exercises	200
12 Infimal Convolution	203
12.1 Definition and Basic Facts	203
12.2 Infimal Convolution of Convex Functions	206
12.3 Pasch–Hausdorff Envelope	208
12.4 Moreau Envelope and Proximity Operator	209
12.5 Infimal Postcomposition	214
Exercises	215
13 Conjugation	219
13.1 Definition and Examples	219
13.2 Basic Properties	223
13.3 The Fenchel–Moreau Theorem	231
Exercises	235
14 Further Conjugation Results	237
14.1 Moreau’s Decomposition	237
14.2 Proximal Average	239
14.3 Positively Homogeneous Functions	242
14.4 Coercivity	243
14.5 The Conjugate of a Difference	245
Exercises	245
15 Fenchel–Rockafellar Duality	247
15.1 The Attouch–Brézis Theorem	247
15.2 Fenchel Duality	252
15.3 Fenchel–Rockafellar Duality	253
15.4 A Conjugation Result	257
15.5 Applications	258
Exercises	260

16 Subdifferentiability of Convex Functions	263
16.1 Basic Properties	263
16.2 Convex Functions	267
16.3 Lower Semicontinuous Convex Functions	271
16.4 Subdifferential Calculus	275
16.5 The Subdifferential of a Composition	283
Exercises	286
17 Differentiability of Convex Functions	289
17.1 Directional Derivatives	289
17.2 Characterizations of Convexity	292
17.3 Characterizations of Strict Convexity	294
17.4 Directional Derivatives and Subgradients	295
17.5 Directional Derivatives and Convexity	300
17.6 Gâteaux and Fréchet Differentiability	302
17.7 Differentiability and Continuity	309
Exercises	310
18 Further Differentiability Results	313
18.1 The Ekeland–Lebourg Theorem	313
18.2 The Subdifferential of a Maximum	316
18.3 Differentiability of Infimal Convolutions	318
18.4 Differentiability and Strict Convexity	319
18.5 Stronger Notions of Differentiability	320
18.6 Differentiability of the Distance to a Set	324
Exercises	326
19 Duality in Convex Optimization	329
19.1 Primal Solutions via Dual Solutions	329
19.2 Parametric Duality	333
19.3 Minimization under Equality Constraints	338
19.4 Minimization under Inequality Constraints	340
Exercises	346
20 Monotone Operators	349
20.1 Monotone Operators	349
20.2 Maximally Monotone Operators	353
20.3 The Partial Inverse	359
20.4 Bivariate Functions and Maximal Monotonicity	360
20.5 The Fitzpatrick Function	363
Exercises	367

21 Finer Properties of Monotone Operators	369
21.1 Minty's Theorem	369
21.2 The Debrunner–Flor Theorem	373
21.3 Domain and Range	374
21.4 Local Boundedness and Surjectivity	377
21.5 Kenderov's Theorem and Fréchet Differentiability	379
Exercises	380
22 Stronger Notions of Monotonicity	383
22.1 Para, Strict, Uniform, and Strong Monotonicity	383
22.2 Cyclic Monotonicity	387
22.3 Rockafellar's Cyclic Monotonicity Theorem	389
22.4 Monotone Operators on \mathbb{R}	390
Exercises	391
23 Resolvents of Monotone Operators	393
23.1 Basic Identities	393
23.2 Monotonicity and Firm Nonexpansiveness	395
23.3 Resolvent Calculus	398
23.4 Zeros of Monotone Operators	405
23.5 Asymptotic Behavior	407
Exercises	410
24 Proximity Operators	413
24.1 Characterizations	413
24.2 Basic Properties	415
24.3 Distance-Based Functions	422
24.4 Functions on the Real Line	426
24.5 Proximal Thresholding	432
24.6 Perspective Functions	437
24.7 Symmetric Functions of Symmetric Matrices	439
24.8 Functions of Rectangular Matrices	444
Exercises	446
25 Sums of Monotone Operators	447
25.1 Maximal Monotonicity of Sums and Composite Sums	447
25.2 Local Maximal Monotonicity	450
25.3 3^* Monotone Operators of Brézis and Haraux	451
25.4 The Brézis–Haraux Theorem	455
25.5 Parallel Sum	457
25.6 Parallel Composition	459
Exercises	461

26 Zeros of Sums of Monotone Operators	465
26.1 Duality and Characterizations	465
26.2 Spingarn's Method of Partial Inverses	471
26.3 Douglas–Rachford Splitting Algorithm	473
26.4 Peaceman–Rachford Splitting Algorithm	477
26.5 Forward-Backward Splitting Algorithm	478
26.6 Tseng's Splitting Algorithm	481
26.7 Variational Inequalities	483
26.8 Composite Inclusion Problems	486
Exercises	493
27 Fermat's Rule in Convex Optimization	497
27.1 General Characterizations of Minimizers	497
27.2 Abstract Constrained Minimization Problems	500
27.3 Affine Constraints	503
27.4 Cone Constraints	505
27.5 Convex Inequality Constraints	507
27.6 Regularization of Minimization Problems	511
Exercises	513
28 Proximal Minimization	515
28.1 The Proximal-Point Algorithm	515
28.2 Spingarn's Method of Partial Inverses	517
28.3 Douglas–Rachford Splitting Algorithm	517
28.4 Peaceman–Rachford Splitting Algorithm	521
28.5 Forward-Backward Splitting Algorithm	522
28.6 Tseng's Splitting Algorithm	527
28.7 A Primal-Dual Algorithm	528
28.8 Composite Minimization Problems	531
Exercises	533
29 Projection Operators	535
29.1 Basic Properties	535
29.2 Affine Subspaces	539
29.3 Projections onto Special Polyhedra	541
29.4 Projections Involving Convex Cones	549
29.5 Projections onto Epigraphs and Lower Level Sets	551
29.6 Subgradient Projectors	552
Exercises	558
30 Best Approximation Algorithms	561
30.1 Halpern's Algorithm	561
30.2 Dykstra's Algorithm	565
30.3 Haugazeau's Algorithm	570
Exercises	574
