

Contents

1	Introduction	1
1.1	System Complexity	1
1.2	Variable Structure Control	3
1.3	Sliding Mode Control	4
1.3.1	Sliding Mode Control Methodology	5
1.3.2	Sliding Mode Control of a Mass–Spring Damper System	9
1.3.3	Characteristics of Sliding Mode Control	12
1.4	Decentralised Control	14
1.4.1	Background	14
1.4.2	Fundamental Concept	15
1.5	Examples of Complex Systems	18
1.5.1	One-Machine Infinite-Bus System	18
1.5.2	PVTOL Aircraft	19
1.5.3	Stirred Tank Reactor	20
1.5.4	Coupled Inverted Pendula on Carts	21
1.5.5	Multimachine Power Systems	22
1.5.6	A Biochemical System—Peroxidase–Oxidase Reaction	24
1.6	Outline of This Book	24
2	Mathematical Background	27
2.1	Lipschitz Function	27
2.1.1	Lipschitz Condition	27
2.1.2	Generalised Lipschitz Condition	28
2.2	Comparison Functions	29
2.3	Lyapunov Stability Theorems	31
2.3.1	Asymptotic Stability	32
2.3.2	Exponential Stability	32
2.3.3	Converse Lyapunov Theorem	32

2.4	Uniformly Ultimate Boundedness	33
2.5	Razumikhin Theorem	34
2.6	Output Sliding Surface Design	36
2.7	Geometric Structure of Nonlinear System	39
2.8	Summary	41
3	Static Output Feedback Variable Structure Control	43
3.1	Introduction	43
3.2	Robust Global Stabilisation of Nonlinear Systems	45
3.2.1	Background	45
3.2.2	System Description and Assumptions	46
3.2.3	Lyapunov Approach Based Control Design	48
3.2.4	Local Output Sliding Surface Design	50
3.2.5	Local Stability of Sliding Motion	51
3.2.6	Local Sliding Mode Controller	53
3.2.7	Global Variable Structure Control Synthesis	55
3.3	Decentralised Sliding Mode Control for Large-Scale Interconnected Systems	56
3.3.1	Introduction	57
3.3.2	System Description and Problem Formulation	58
3.3.3	Basic Assumptions	58
3.3.4	Stability Analysis of Sliding Mode Dynamics	60
3.3.5	Decentralised Output Feedback Sliding Mode Control	64
3.4	Case Studies—Implementation of Static Output Control	69
3.4.1	Application to a Forced Mass–Spring System	69
3.4.2	Application to Control of Coupled Inverted Pendula	72
3.4.3	Application to Flight Control Systems	75
3.5	Summary	78
4	Dynamical Output Feedback Variable Structure Control	81
4.1	Introduction	81
4.2	Control of Nonlinear Systems with Matched and Mismatched Uncertainties	82
4.2.1	Introduction	82
4.2.2	System Description and Preliminaries	82
4.2.3	Stability Analysis of the Sliding Mode	84
4.2.4	Variable Structure Observer Design	86
4.2.5	Sliding Mode Control Design	89
4.3	Control of Nonminimum Phase Systems with Nonlinear Disturbances	91
4.3.1	Introduction	91
4.3.2	System Description and Preliminaries	92
4.3.3	Dynamical Compensator Design	94
4.3.4	Stability of the Reduced Order Sliding Motion	96
4.3.5	Sliding Mode Control Design	100

4.4	Case Study: Control of HIRM Aircraft.	102
4.4.1	Control of Longitudinal Dynamics	102
4.4.2	Control of Lateral Dynamics.	105
4.5	Summary	110
5	Reduced-Order Compensator-Based Feedback Control of Large-Scale Systems	113
5.1	Introduction	113
5.2	Decentralised Sliding Mode Control for Nonminimum Phase Interconnected Systems.	114
5.2.1	Introduction.	114
5.2.2	Interconnected System Description	115
5.2.3	Reduced-Order Compensator Design.	117
5.2.4	Sliding Mode Design and Stability Analysis.	120
5.2.5	Sliding Mode Controller Synthesis	125
5.3	Reduced-Order Control Design for Interconnected Systems with Similar Structure.	129
5.3.1	Introduction.	129
5.3.2	System Description and Assumptions	130
5.3.3	Preliminaries	133
5.3.4	Reduced-Order Controller Design	136
5.4	Simulation Examples	146
5.4.1	Case Study on HIRM Aircraft.	146
5.4.2	Case Study on Coupled Inverted Pendula	152
5.4.3	A Numerical Simulation Example.	155
5.5	Summary	158
6	Delay Dependent Output Feedback Control	159
6.1	Introduction	159
6.2	Static Output Feedback Control of Time-Delay Systems	160
6.2.1	Preliminaries	161
6.2.2	System Description and Problem Formulation.	162
6.2.3	Sliding Motion Analysis and Control Design	164
6.3	Reduced-Order Observer-Based Sliding Mode Control.	170
6.3.1	Introduction.	171
6.3.2	System Description	171
6.3.3	Reduced-Order Observer Design.	173
6.3.4	Sliding Surface Design	177
6.3.5	Equivalent System and Sliding Mode Dynamics.	178
6.3.6	Stability of Sliding Motion	180
6.3.7	Sliding Mode Control Design	183
6.4	Decentralised Static Output Feedback Sliding Mode Control	185
6.4.1	Introduction.	186
6.4.2	System Description and Problem Formulation.	187

6.4.3	Sliding Mode Stability Analysis	190
6.4.4	Reachability Analysis	195
6.5	Numerical Simulation Examples	197
6.5.1	Static Output Feedback Control	198
6.5.2	Reduced-Order Observer-Based Feedback Control	202
6.5.3	Decentralised Output Feedback Control	205
6.6	Application to River Pollution Control	209
6.7	Summary	212
7	Delay Independent Output Feedback Control	213
7.1	Introduction	213
7.2	Lyapunov Technique-Based Variable Structure Control for Nonlinear Systems	214
7.2.1	Introduction	214
7.2.2	System Description and Analysis	215
7.2.3	Asymptotic Stabilisation Control Synthesis	218
7.2.4	Exponential Stabilisation Control Synthesis	221
7.3	Sliding Mode Technique-Based Variable Structure Control for Nonlinear Systems	224
7.3.1	Introduction	224
7.3.2	System Description and Problem Formulation	225
7.3.3	Sliding Motion Analysis and Control Synthesis	228
7.4	Decentralised Output Feedback Control for Nonlinear Interconnected Systems	237
7.4.1	Introduction	237
7.4.2	System Description and Basic Assumptions	238
7.4.3	Decentralised Output Feedback Control Design	240
7.5	Simulation Examples	248
7.5.1	Case Study—A Mass–Spring System	248
7.5.2	Sliding Mode Control Synthesis	252
7.5.3	A Time-Delay Nonlinear Interconnected System	257
7.6	Summary	260
8	Sliding Mode Observer-Based Fault Detection and Isolation	263
8.1	Introduction	263
8.2	Nonlinear Robust Fault Reconstruction and Estimation	264
8.2.1	Introduction	264
8.2.2	System Analysis and Preliminaries	266
8.2.3	A Sliding Mode Observer Design	267
8.2.4	Robust Fault Detection and Estimation	272
8.3	Sensor FDI for a Class of Nonlinear Systems	275
8.3.1	Introduction	275
8.3.2	Problem Formulation	276
8.3.3	System Analysis and Assumptions	277
8.3.4	Sliding Mode Observer Synthesis	280

8.3.5	Sensor FDI for the Nominal Case	281
8.3.6	Sensor FDI for Systems with Uncertainty	285
8.3.7	Procedure for Sensor Fault Reconstruction/Estimation . . .	288
8.4	Case Studies	289
8.4.1	Fault Reconstruction and Estimation for a Robot System	289
8.4.2	Sensor FDI for a Mass–Spring System	293
8.5	Summary	296
9	Application of Decentralised Sliding Mode Control to Multimachine Power Systems.	297
9.1	Introduction	297
9.2	Dynamical Model for Multimachine Power Systems	299
9.3	Sliding Motion Analysis and Control Design	301
9.3.1	Basic Assumptions	301
9.3.2	Stability of Sliding Motion	302
9.3.3	Sliding Mode Control Synthesis	305
9.4	Simulation for the Three-Machine Power System	310
9.5	Summary	313
10	Concluding Remarks.	315
	Appendix A: Results Used in Sect. 6.3.	323
	Appendix B: Results Used in Sect. 6.4.	327
	Appendix C: Identification of a Class of Functions	329
	Appendix D: Lemmas for Chap. 8.	331
	Appendix E: Notation and Parameters for Multimachine Power Systems.	335
