<b>1</b>	<b>Nanoceramics: Fundamentals and Advanced Perspectives</b>	<b>1</b>
	Ephraim Vunain, S.B. Mishra, Ajay Kumar Mishra and B.B. Mamba	
1.1	General Introduction to Nanomaterials	1
1.1.1	Introduction to Nanoceramics	2
1.2	Techniques to Develop Nanoceramics	3
1.2.1	Aqueous Sol–Gel Chemistry for the Synthesis of Nanoceramics	4
1.3	Recent Progress in the Field of Common and Advanced of Nanoceramics	5
1.3.1	Silicate-Based Nanoceramics	6
1.3.2	Zirconia-Based Nanoceramics	7
1.3.3	Titania-Based Nanoceramics	7
1.3.4	Borate-Based Nanoceramics	8
1.3.5	Silicon Carbide-Based Nanoceramics	9
1.3.6	Boron Carbide-Based Nanoceramics	9
1.4	Applications of Nanoceramics	10
1.4.1	Industrial Applications	10
1.4.2	Environmental Applications	12
1.4.3	Biomedical and Healthcare Applications	13
1.4.4	Defence and Space Applications	14
1.4.5	Strategic Applications	15
1.5	Future Scope of Nanoceramics	15
	References	16
<b>2</b>	<b>Advance Techniques for the Synthesis of Nanostructured Zirconia-Based Ceramics for Thermal Barrier Application</b>	<b>21</b>
	Reza Shoja Razavi and Mohammad Reza Loghman-Estarki	
2.1	Introduction	21
2.2	Zirconia Structure and Its Applications	22

2.2.1	Types of Stabilized Zirconia . . . . .	24
2.2.1.1	Magnesia-Stabilized Zirconia . . . . .	26
2.2.1.2	Calcia-Stabilized Zirconia (CaSZ) . . . . .	35
2.2.1.3	Yttria Stabilized Zirconia (YSZ) . . . . .	38
2.2.1.4	Ceria Stabilized Zirconia ( $\text{ZrO}_2\text{--CeO}_2$ Solid Solution) . . . . .	49
2.2.1.5	Ceria, Yttria Co-stabilized Zirconia (CYSZ) . . . . .	55
2.2.1.6	Scandia, Yttria Co-stabilized Zirconia (ScYSZ) . . . . .	61
2.2.1.7	Rare Earth Zirconates . . . . .	73
2.2.1.8	Zirconia—Alumina Nanocomposite. . . . .	77
2.3	Summary . . . . .	83
	References. . . . .	83
<b>3</b>	<b>Synthesis of Nanostructure Ceramics and Their Composites. . . . .</b>	<b>93</b>
	Ankita Dhillon and Dinesh Kumar	
3.1	Introduction . . . . .	93
3.2	Synthesis of Nanocomposite Ceramic Powders. . . . .	94
3.2.1	Conventional Powder Method . . . . .	95
3.2.2	Mechanochemical Synthesis . . . . .	96
3.2.3	Polymer Precursor Route. . . . .	97
3.2.4	Vapor-Phase Reaction Technique . . . . .	98
3.2.5	Self-propagating High-Temperature Synthesis and Combustion Synthesis. . . . .	99
3.2.6	Solution Based Techniques . . . . .	101
3.2.6.1	Sol–Gel . . . . .	101
3.2.6.2	Co-precipitation. . . . .	103
3.2.6.3	Spray Decomposition . . . . .	105
3.2.6.4	Solution Combustion. . . . .	106
3.2.6.5	Surface Modification Methods. . . . .	106
3.2.6.6	Industrial Production of Ceramic Composite Powders. . . . .	108
3.3	Summary . . . . .	109
3.4	Future Scenario. . . . .	109
	References. . . . .	110
<b>4</b>	<b>Structure, Stabilities, and Electronic Properties of Smart Ceramic Composites . . . . .</b>	<b>113</b>
	Yoshitaka Fujimoto	
4.1	Introduction . . . . .	113
4.2	Theoretical Methodology . . . . .	115
4.2.1	First-Principles Total Energy Calculation . . . . .	115
4.2.2	Formation Energy . . . . .	116
4.2.3	Scanning Tunneling Microscopy Images . . . . .	116

4.2.4	Computational Settings . . . . .	116
4.3	Pristine <i>h</i> -BN Monolayer . . . . .	117
4.3.1	Geometry and Energy Band Structure . . . . .	117
4.3.2	Strain Effects and Electronic Properties . . . . .	117
4.4	Carbon-Doped <i>h</i> -BN Monolayer . . . . .	120
4.4.1	Atomic Structure and Energetics . . . . .	120
4.4.2	Ionization Energy . . . . .	120
4.4.3	Energy Band Structure . . . . .	122
4.4.4	Work Function . . . . .	124
4.4.5	Electronic State . . . . .	125
4.4.6	Scanning Tunneling Microscopy Image . . . . .	126
4.4.7	Total Charge Density . . . . .	128
4.5	Summary . . . . .	129
	References . . . . .	129
<b>5</b>	<b>Advancement of Glass-Ceramic Materials for Photonic Applications . . . . .</b>	<b>133</b>
	Alexander Quandt, Maurizio Ferrari and Giancarlo C. Righini	
5.1	Introduction . . . . .	133
5.2	Transparent Glass-Ceramics and Their Application to Integrated and Fibre Optics . . . . .	135
5.2.1	Optical Planar Waveguides . . . . .	136
5.2.2	Glass-Ceramic Optical Fibres . . . . .	137
5.3	Photoluminescence in Glass-Ceramics and Its Applications . . . . .	138
5.3.1	Luminescence from RE-Activated Planar Waveguides . . . . .	139
5.3.2	Active Glass-Ceramic Optical Fibres . . . . .	139
5.4	Glass-Ceramics for Solar Cells . . . . .	141
5.4.1	Solar Cells and Their Efficiencies . . . . .	141
5.4.2	Luminescent Conversion Layers . . . . .	143
5.4.3	Thermo-photovoltaics . . . . .	146
5.5	Other Photonics Applications . . . . .	147
5.5.1	Photonic Crystals . . . . .	148
5.6	Summary and Outlook . . . . .	150
	References . . . . .	152
<b>6</b>	<b>Ceramic Nanocomposites for Solid Oxide Fuel Cells . . . . .</b>	<b>157</b>
	Hui Hui Lim, Erick Sulistya, May Yuan Wong, Babak Salamatnia and Bahman Amini Horri	
6.1	Introduction . . . . .	158
6.2	Solid Oxide Fuel Cell (SOFC) . . . . .	158
6.2.1	Fundamental Mechanism of SOFC . . . . .	158
6.2.2	Type of SOFC . . . . .	159
6.2.3	Components of a SOFC . . . . .	160

6.3	Anode (Fuel Electrode) . . . . .	160
6.3.1	Nickel (II) Oxide (NiO). . . . .	160
6.3.1.1	Properties of NiO . . . . .	161
6.3.1.2	Synthesis of NiO. . . . .	161
6.3.2	Nickel/Yttria Stabilized Zirconia (Ni/YSZ) Cermets Anode . . . . .	162
6.3.2.1	Synthesis of Ni/YSZ Cermet Anode . . . . .	163
6.3.2.2	Effect of Ni/YSZ Composition Ratio. . . . .	164
6.3.2.3	Effect of Grain Size. . . . .	165
6.3.3	Nickel/Gadolinium-Doped Ceria (Ni/GDC) Cermets Anode . . . . .	166
6.3.3.1	Synthesis of Ni/GDC Cermet Anode. . . . .	166
6.4	Electrolyte . . . . .	167
6.4.1	Yttria Stabilized Zirconia (YSZ) . . . . .	167
6.4.1.1	Properties of YSZ . . . . .	167
6.4.1.2	Synthesis of YSZ . . . . .	168
6.4.1.3	Other Materials . . . . .	172
6.5	Cathode (Air Electrode) . . . . .	174
6.5.1	Strontium-Doped Lanthanum Manganite (LSM) . . . . .	174
6.5.1.1	Synthesis of Strontium-Doped Lanthanum Manganite . . . . .	174
6.5.1.2	Effect of Microstructural Properties of LSM Cathode and Electrochemical Performance . . . . .	175
6.5.1.3	Effect of Variation on Sr Composition Ratio on LSM Powder . . . . .	175
6.5.1.4	Effects of Modification of LSM Based Cathode . . . . .	176
6.5.2	LSCF. . . . .	176
6.5.2.1	LSCF Powder Synthesis Methods and Surface Properties . . . . .	177
6.5.2.2	Effect of Compositional Ratio of LSCF on Cathodic Performance . . . . .	177
6.5.2.3	Modifications of LSCF Based Cathode . . . . .	177
6.6	Conclusion . . . . .	178

<b>7</b>	<b>A Review of Nanoceramic Materials for Use in Ceramic Matrix Composites. . . . .</b>	<b>185</b>
	Steven L. Suib	
7.1	Introduction . . . . .	186
7.2	Ceramics. . . . .	186
7.3	Ceramic Matrix Composites . . . . .	186
7.3.1	Definition and Advantages . . . . .	187
7.3.2	Types of CMC's . . . . .	188

7.3.3	Continuous Fiber-Reinforced . . . . .	190
7.3.4	Parts of a CMC with Focus on Nanoceramics . . . . .	190
7.3.5	Fibers . . . . .	190
7.3.6	Oxides and Non-oxides . . . . .	190
7.3.7	Brands, Diameters and Grain Sizes . . . . .	191
7.3.8	Grain Size and Fiber Durability . . . . .	192
7.3.9	Interfaces . . . . .	193
7.4	CVD Application of BN/Graphite Interfaces . . . . .	194
7.4.1	Matrices . . . . .	195
7.4.2	PIP or CVI Matrices . . . . .	195
7.4.3	Characterization of CMC's . . . . .	196
7.5	Application of CMC's . . . . .	198
7.5.1	Electronics . . . . .	198
7.5.2	Heat Sinks . . . . .	199
7.5.3	Aerospace and Aircraft . . . . .	200
7.6	Background . . . . .	200
7.6.1	History of CMC's in Regard to Nanoceramics . . . . .	200
7.6.2	Advancements in CVD . . . . .	204
7.6.2.1	Fabrication of CVD/CVI Components . . . . .	204
7.6.2.2	Advantages of CVD/CVI . . . . .	204
7.6.3	Advancements in Preceramic Polymers . . . . .	205
7.6.3.1	Production of Preceramic Polymers . . . . .	205
7.6.3.2	Advantages of CVD/CVI . . . . .	207
7.7	Nanoceramics in CMC's . . . . .	207
7.7.1	Fibers . . . . .	208
7.7.1.1	Ceramic Materials (Alumina, SiC, Silica, Zirconia) . . . . .	208
7.7.1.2	Preceramic Polymer Sources . . . . .	209
7.7.1.3	Grain Growth and Control . . . . .	210
7.7.1.4	Nanocrystalline Versus Amorphous, Advantages and Disadvantages . . . . .	211
7.7.1.5	Analyses . . . . .	212
7.7.2	Interfaces . . . . .	213
7.7.2.1	Purpose, Mechanical Advantages . . . . .	213
7.7.2.2	Boron Nitride, Graphite Solid-State Lubrication Properties with a Focus on Nanoceramics . . . . .	214
7.7.2.3	LP-CVD Deposition of BN/Graphite Interface . . . . .	214
7.7.2.4	Advantages of CVD Interface . . . . .	216
7.7.2.5	Non-CVD Interface (Sol-Gel), Focus on Nanoscale Grains . . . . .	217

7.7.3	Matrices. . . . .	219
7.7.3.1	Materials, Fillers, Grain Size and Importance . . . . .	219
7.7.3.2	Fabrication of Matrices . . . . .	220
7.7.3.3	Preventing Grain Growth . . . . .	223
7.7.3.4	Effect of Grain Growth on Mechanical Properties . . . . .	223
7.7.3.5	Sintering Agents Versus Grain Growth Inhibitors. . . . .	224
7.8	Future Work in Nanoceramics and Nanocomposites. . . . .	225
7.8.1	Other Applications. . . . .	225
7.8.1.1	Electronics. . . . .	225
7.8.1.2	Transistors. . . . .	225
7.8.1.3	Biological . . . . .	226
7.8.1.4	Others . . . . .	227
