1	Mechanics of Fluid Flow Through a Porous Medium	1
1.1	Introduction	1
1.2	Porosity	4
1.3	Seepage Velocity and the Equation of Continuity	5
1.4	Momentum Equation: Darcy's Law	5
1.4.1	Darcy's Law: Permeability	5
1.4.2	Deterministic Models Leading to Darcy's Law	7
1.4.3	Statistical Models Leading to Darcy's Law	7
1.5	Extensions of Darcy's Law	8
1.5.1	Acceleration and Other Inertial Effects	8
1.5.2	Quadratic Drag: Forchheimer's Equation	10
1.5.3	Brinkman's Equations	15
1.5.4	Non-Newtonian Fluid	19
1.6	Hydrodynamic Boundary Conditions	20
1.7	Effects of Porosity Variation	27
1.8	Turbulence in Porous Media	29
1.9	Fractured Media, Deformable Media, and Complex Porous Structures	32
1.10	Bidisperse Porous Media	33
2	Heat Transfer Through a Porous Medium	37
2.1	Energy Equation: Simple Case	37
2.2	Energy Equation: Extensions to More Complex Situations	38
2.2.1	Overall Thermal Conductivity of a Porous Medium	38
2.2.2	Effects of Pressure Changes and Viscous Dissipation	41
2.2.3	Absence of Local Thermal Equilibrium	42
2.2.4	Thermal Dispersion	46

2.2.5	Cellular Porous Media	49
2.2.6	Heat Wave Theory	49
2.3	Oberbeck–Boussinesq Approximation	50
2.4	Thermal Boundary Conditions	50
2.5	Hele-Shaw Analogy	51
2.6	Bioheat Transfer	53
2.7	Other Approaches, Numerical Methods	54
3	Mass Transfer in a Porous Medium: Multicomponent and Multiphase Flows	57
3.1	Multicomponent Flow: Basic Concepts	57
3.2	Mass Conservation in a Mixture	59
3.3	Combined Heat and Mass Transfer	61
3.4	Effects of a Chemical Reaction	63
3.5	Multiphase Flow	64
3.5.1	Conservation of Mass	66
3.5.2	Conservation of Momentum	67
3.5.3	Conservation of Energy	69
3.5.4	Summary: Relative Permeabilities	71
3.6	Unsaturated Porous Media	74
3.7	Electrodiffusion Through Porous Media	75
3.8	Nanofluids	77
3.8.1	Property Variations	78
3.8.2	Processes Associated with the Smallness of Nanoparticles	79
4	Forced Convection	85
4.1	Plane Wall with Prescribed Temperature	85
4.2	Plane Wall with Constant Heat Flux	89
4.3	Sphere and Cylinder: Boundary Layers	90
4.4	Point Source and Line Source: Thermal Wakes	93
4.5	Confined Flow	95
4.6	Transient Effects	97
4.6.1	Scale Analysis	98
4.6.2	Wall with Constant Temperature	99
4.6.3	Wall with Constant Heat Flux	102
4.6.4	Other Configurations	103
4.7	Effects of Inertia and Thermal Dispersion: External Flow	104
4.8	Effects of Boundary Friction and Porosity Variation: Exterior Flow	106
4.9	Effects of Boundary Friction, Inertia, Porosity Variation, Thermal Dispersion, and Axial Conduction: Confined Flow	110
4.10	Local Thermal Nonequilibrium	119
4.11	Partly Porous Configurations	121

4.12	Transversely Heterogeneous Channels and Pipes	124
4.13	Thermal Development	126
4.14	Surfaces Covered with Porous Layers	127
4.15	Designed Porous Media	131
4.16	Other Configurations or Effects	134
4.16.1	Effect of Temperature-Dependent Viscosity	134
4.16.2	Oscillatory Flows, Counterflows	135
4.16.3	Non-Newtonian Fluids	136
4.16.4	Bidisperse Porous Media	137
4.16.5	Other Flows, Other Effects	138
4.17	Heatlines for Visualizing Convection	140
4.18	Constructal Tree Networks: Flow Access in Volume-to-Point Flow	143
4.18.1	The Fundamental Volume-to-Point Flow Problem	144
4.18.2	The Elemental Volume	145
4.18.3	The First Construct	148
4.18.4	Higher-Order Constructs	149
4.18.5	The Constructal Law of Design and Evolution in Nature	151
4.19	Constructal Multiscale Flow Structures: Vascular Design	154
4.20	Optimal Spacings for Plates Separated by Porous Structures	158
5	External Natural Convection	161
5.1	Vertical Plate	161
5.1.1	Power Law Wall Temperature: Similarity Solution	163
5.1.2	Vertical Plate with Lateral Mass Flux	165
5.1.3	Transient Case: Integral Method	166
5.1.4	Effects of Ambient Thermal Stratification	168
5.1.5	Conjugate Boundary Layers	170
5.1.6	Higher-Order Boundary Layer Theory	173
5.1.7	Effects of Boundary Friction, Inertia, and Thermal Dispersion	175
5.1.8	Experimental Investigations	182
5.1.9	Further Extensions of the Theory	184
5.2	Horizontal Plate	193
5.3	Inclined Plate, Wedge	198
5.4	Vortex Instability	200
5.5	Horizontal Cylinder	202
5.5.1	Flow at High Rayleigh Number	202
5.5.2	Flow at Low and Intermediate Rayleigh Number	205

5.6	Sphere or Spherical Annulus	207
5.6.1	Flow at High Rayleigh Number	207
5.6.2	Flow at Low Rayleigh Number	209
5.6.3	Flow at Intermediate Rayleigh Number	210
5.7	Vertical Cylinder	211
5.8	Cone or Wedge	213
5.9	General Two-Dimensional or Axisymmetric Surface	217
5.10	Horizontal Line Heat Source	219
5.10.1	Flow at High Rayleigh Number	219
5.10.2	Flow at Low Rayleigh Number	224
5.11	Point Heat Source	226
5.11.1	Flow at High Rayleigh Number	226
5.11.2	Flow at Low Rayleigh Number	229
5.11.3	Flow at Intermediate Rayleigh Number	233
5.12	Other Configurations	235
5.12.1	Fins Projecting from a Heated Base	235
5.12.2	Flows in Regions Bounded by Two Planes	236
5.12.3	Other Situations	236
5.13	Surfaces Covered with Hair	237
6	Internal Natural Convection: Heating from Below	241
6.1	Horton-Rogers-Lapwood Problem	241
6.2	Linear Stability Analysis	243
6.3	Weak Nonlinear Theory: Energy and Heat Transfer Results	247
6.4	Weak Nonlinear Theory: Further Results	251
6.5	Effects of Solid-Fluid Heat Transfer: Local Thermal Nonequilibrium	258
6.6	Non-Darcy, Dispersion, and Viscous Dissipation Effects	260
6.7	Non-Boussinesq Effects	264
6.8	Finite-Amplitude Convection: Numerical Computation and Higher-Order Transitions	266
6.9	Experimental Observations	269
6.9.1	Observations of Flow Patterns and Heat Transfer	269
6.9.2	Correlations of the Heat Transfer Data	272
6.9.3	Further Experimental Observations	277
6.10	Effect of Net Mass Flow	279
6.10.1	Horizontal Throughflow	279
6.10.2	Vertical Throughflow	280
6.11	Effect of Nonlinear Basic Temperature Profiles	283
6.11.1	General Theory	283
6.11.2	Internal Heating	284
6.11.3	Time-Dependent Heating	288

6.11.4	Penetrative Convection, Icy Water, Quadratic Density Model, Resonance	295
6.11.5	Imperfect Heat Transfer	296
6.12	Effects of Anisotropy	296
6.13	Effects of Heterogeneity	300
6.13.1	General Considerations	300
6.13.2	Layered Porous Media	301
6.13.3	Analogy Between Layering and Anisotropy	304
6.13.4	Heterogeneity in the Horizontal Direction	304
6.13.5	Heterogeneity in Both Horizontal and Vertical Directions	309
6.13.6	Strong Heterogeneity	309
6.14	Effects of Nonuniform Heating	309
6.15	Rectangular Box or Channel	312
6.15.1	Linear Stability Analysis, Bifurcation Theory, and Numerical Studies	312
6.15.2	Thin Box or Slot	317
6.15.3	Additional Effects	318
6.16	Cylinder or Annulus	321
6.16.1	Vertical Cylinder or Annulus	321
6.16.2	Horizontal Cylinder or Annulus or Spherical Annulus	323
6.17	Internal Heating in Other Geometries	324
6.18	Localized Heating	326
6.19	Superposed Fluid and Porous Layers, Partly Porous Configurations	331
6.19.1	Onset of Convection	331
6.19.2	Flow Patterns and Heat Transfer	339
6.19.3	Other Configurations and Effects	340
6.20	Layer Saturated with Water Near 4 °C	341
6.21	Effects of a Magnetic Field or Electric Field, Ferromagnetic Fluid	342
6.21.1	MHD Effects	342
6.21.2	Ferrofluid	344
6.21.3	Electroconvection	344
6.22	Effects of Rotation	345
6.22.1	Coriolis and Centrifugal Effects	345
6.22.2	Rotating Non-Newtonian Fluids	348
6.23	Non-Newtonian and Other Types of Fluids	348
6.23.1	Power-Law Fluids	348
6.23.2	Micropolar Fluids	348
6.23.3	Viscoelastic Fluids	349
6.23.4	Couple-Stress Fluids	349
6.23.5	Other Fluids	350

6.24	Effects of Vertical Vibration and Variable Gravity	350
6.25	Bioconvection	353
6.26	Constructal Theory of Bénard Convection	354
6.26.1	The Many Counterflows Regime	355
6.26.2	The Few Plumes Regime	357
6.26.3	The Intersection of Asymptotes	360
6.27	Bidisperse Porous Media, Cellular Porous Media	361
7	Internal Natural Convection: Heating from the Side	363
7.1	Darcy Flow Between Isothermal Side Walls	363
7.1.1	Heat Transfer Regimes	363
7.1.2	Boundary Layer Regime	368
7.1.3	Shallow Layer	373
7.1.4	Stability of Flow	377
7.1.5	Conjugate Convection	379
7.1.6	Non-Newtonian Fluid	380
7.1.7	Other Situations	381
7.2	Side Walls with Uniform Flux and Other Thermal Conditions	383
7.3	Other Configurations and Effects of Property Variation	385
7.3.1	Internal Partitions	385
7.3.2	Effects of Heterogeneity and Anisotropy	386
7.3.3	Cylindrical or Annular Enclosure	391
7.3.4	Spherical Enclosure	396
7.3.5	Porous Medium Saturated with Water Near 4 °C	397
7.3.6	Triangular Enclosure	399
7.3.7	Other Enclosures	400
7.3.8	Internal Heating	403
7.3.9	Bidisperse Porous Media, Other Situations	404
7.4	Penetrative Convection	404
7.4.1	Lateral Penetration	405
7.4.2	Vertical Penetration	407
7.4.3	Other Penetrative Flows	409
7.5	Transient Effects	410
7.6	Departure from Darcy Flow	414
7.6.1	Inertial Effects	414
7.6.2	Boundary Friction, Variable Porosity, Local Thermal Nonequilibrium, Viscous Dissipation, and Thermal Dispersion Effects	417
7.7	Fluid and Porous Regions	418
7.8	Sloping Porous Layer or Enclosures	423
7.9	Inclined Temperature Gradient	430
7.10	Periodic Heating	432
7.11	Sources in Confined or Partly Confined Regions	434
7.12	Effects of Rotation	436

8	Mixed Convection	439
8.1	External Flow	439
8.1.1	Inclined or Vertical Plane Wall	439
8.1.2	Horizontal Wall	447
8.1.3	Cylinder or Sphere	448
8.1.4	Other Geometries	452
8.1.5	Unified Theory	454
8.1.6	Other Aspects of External Flow	458
8.2	Internal Flow: Horizontal Channel	458
8.2.1	Horizontal Layer: Uniform Heating	458
8.2.2	Horizontal Layer: Localized Heating	460
8.2.3	Horizontal Cylinder or Annulus	462
8.2.4	Horizontal Layer: Lateral Heating	462
8.3	Internal Flow: Vertical Channel	463
8.3.1	Vertical Layer: Uniform Heating	463
8.3.2	Vertical Layer: Localized Heating	465
8.3.3	Vertical Cylinder or Annulus: Uniform Heating	465
8.3.4	Vertical Annulus: Localized Heating	467
8.4	Other Geometries and Other Effects	468
8.4.1	Partly Porous Configurations	468
8.4.2	Jet Impingement	469
8.4.3	Other Aspects	469
9	Double-Diffusive Convection	473
9.1	Vertical Heat and Mass Transfer	473
9.1.1	Horton-Rogers-Lapwood Problem	473
9.1.2	Nonlinear Initial Profiles	478
9.1.3	Finite-Amplitude Effects	478
9.1.4	Soret and Dufour Cross-Diffusion Effects	482
9.1.5	Flow at High Rayleigh Number	485
9.1.6	Other Effects	487
9.2	Horizontal Heat and Mass Transfer	496
9.2.1	Boundary Layer Flow and External Natural Convection	496
9.2.2	Enclosed Porous Medium: Channel or Box	505
9.2.3	Transient Effects	513
9.2.4	Stability of Flow	515
9.3	Concentrated Heat and Mass Sources	516
9.3.1	Point Source	516
9.3.2	Horizontal Line Source	519
9.4	Other Configurations and Effects	519
9.5	Inclined and Crossed Gradients	522
9.6	Mixed Double-Diffusive Convection	523
9.6.1	Mixed External Convection	523
9.6.2	Mixed Internal Convection	525

9.7	Nanofluids	526
9.7.1	Forced Convection	526
9.7.2	Internal Natural Convection	528
9.7.3	External Natural Convection	532
9.7.4	Mixed Convection	535
10	Convection with Change of Phase	539
10.1	Melting	539
10.1.1	Enclosure Heated from the Side	539
10.1.2	Scale Analysis	545
10.1.3	Effect of Liquid Superheating	548
10.1.4	Horizontal Liquid Layer	556
10.1.5	Vertical Melting Front in an Infinite Porous Medium	558
10.1.6	A More General Model	559
10.1.7	Further Studies	562
10.2	Freezing and Solidification	565
10.2.1	Cooling from the Side	565
10.2.2	Cooling from Above	569
10.2.3	Solidification of Binary Alloys	570
10.3	Boiling and Evaporation	577
10.3.1	Boiling and Evaporation Produced by Heating from Below	577
10.3.2	Film Boiling and Evaporation	583
10.4	Condensation	588
10.5	Spaces Filled with Fluid and Fibers Coated with a Phase-Change Material	591
11	Geophysical Aspects	595
11.1	Snow	595
11.2	Patterned Ground	597
11.3	Thawing Subsea Permafrost	599
11.4	Magma Production and Magma Chambers	601
11.5	Diagenetic Processes	602
11.6	Oceanic Crust	604
11.6.1	Heat Flux Distribution	604
11.6.2	Topographical Forcing	605
11.7	Geothermal Reservoirs: Injection and Withdrawal	607
11.8	Other Aspects of Single-Phase Flow	608
11.9	Two-Phase Flow	612
11.9.1	Vapor–Liquid Counterflow	612
11.9.2	Heat Pipes	617
11.9.3	Other Aspects	619
11.10	Cracks in Shrinking Solids	619
11.11	Carbon Dioxide Sequestration	622

11.12	Reaction Scenarios	625
11.12.1	Reaction Fronts	625
11.12.2	Gradient Reactions	627
11.12.3	Mixing Zones	628
