|----------|---------------------------------------------------------------|-----------|
| <b>1</b> | <b>Elementary Notions of Relativistic Field Theory</b>        | <b>1</b>  |
| 1.1      | Symmetries and Conservation Laws                              | 1         |
| 1.2      | Global Translations and Canonical Energy-Momentum Tensor      | 6         |
| 1.2.1    | A Comment on the Non-uniqueness of the Definition             | 10        |
| 1.3      | Lorentz Transformations and Canonical Angular Momentum        | 11        |
| 1.3.1    | Symmetrization of the Energy-Momentum Tensor                  | 14        |
| 1.4      | Examples of Energy-Momentum Tensor                            | 15        |
| 1.4.1    | Scalar Field                                                  | 15        |
| 1.4.2    | Electromagnetic Field                                         | 16        |
| 1.4.3    | Point-Like Particle                                           | 18        |
| 1.4.4    | Perfect Fluid                                                 | 21        |
|          | Exercises Chap. 1                                             | 22        |
|          | Solutions                                                     | 23        |
| <b>2</b> | <b>Towards a Relativistic Theory of Gravity</b>               | <b>29</b> |
| 2.1      | The Postulates of the Riemannian Geometry                     | 33        |
| 2.2      | The Equivalence Principle                                     | 36        |
|          | Exercises Chap. 2                                             | 38        |
|          | Solutions                                                     | 39        |
| <b>3</b> | <b>Tensor Calculus in a Riemann Manifold</b>                  | <b>41</b> |
| 3.1      | Covariant and Contravariant Tensors                           | 42        |
| 3.2      | Tensor Densities                                              | 46        |
| 3.3      | Infinitesimal Transformations, Isometries and Killing Vectors | 48        |
| 3.3.1    | Second-Order Infinitesimal Transformations                    | 52        |
| 3.4      | Covariant Derivative and Affine Connection                    | 53        |
| 3.4.1    | Autoparallel Curves                                           | 57        |
| 3.5      | Torsion, Non-metricity and Christoffel Symbols                | 58        |

|          |                                                                     |            |
|----------|---------------------------------------------------------------------|------------|
| 3.6      | Useful Rules of Covariant Differentiation . . . . .                 | 60         |
| 3.6.1    | Trace of the Christoffel Connection . . . . .                       | 61         |
| 3.6.2    | Covariant Derivatives of Tensor Densities . . . . .                 | 62         |
| 3.6.3    | Covariant Divergence and d'Alembert Operator . . . . .              | 63         |
|          | Exercises Chap. 3 . . . . .                                         | 64         |
|          | Solutions . . . . .                                                 | 65         |
| <b>4</b> | <b>Maxwell Equations and Riemann Geometry . . . . .</b>             | <b>69</b>  |
| 4.1      | The Minimal Coupling Principle . . . . .                            | 69         |
| 4.2      | Coupling Geometry to Electromagnetic Fields . . . . .               | 71         |
| 4.3      | The Generalized Maxwell Equations . . . . .                         | 73         |
| 4.3.1    | Analogy with the Equations in an Optical Medium . . . . .           | 75         |
|          | Exercises Chap. 4 . . . . .                                         | 77         |
|          | Solutions . . . . .                                                 | 77         |
| <b>5</b> | <b>Test Bodies and Signals in a Riemann Space-Time . . . . .</b>    | <b>81</b>  |
| 5.1      | Geodesic Motion of Free Particles . . . . .                         | 81         |
| 5.2      | The Newtonian Limit . . . . .                                       | 84         |
| 5.3      | Time Dilatation and Frequency Shifts . . . . .                      | 87         |
| 5.3.1    | The Frequency Shift in a Newtonian Field . . . . .                  | 89         |
|          | Exercises Chap. 5 . . . . .                                         | 91         |
|          | Solutions . . . . .                                                 | 91         |
| <b>6</b> | <b>Geodesic Deviation and Curvature Tensor . . . . .</b>            | <b>95</b>  |
| 6.1      | The Equation of Geodesic Deviation . . . . .                        | 95         |
| 6.2      | The Riemann Curvature Tensor . . . . .                              | 99         |
| 6.3      | A Simple Example: Constant-Curvature Manifolds . . . . .            | 102        |
|          | Exercises Chap. 6 . . . . .                                         | 105        |
|          | Solutions . . . . .                                                 | 106        |
| <b>7</b> | <b>The Einstein Equations for the Gravitational Field . . . . .</b> | <b>115</b> |
| 7.1      | Gravitational Action and Field Equations . . . . .                  | 116        |
| 7.1.1    | Boundary Contributions . . . . .                                    | 118        |
| 7.1.2    | Contribution of the Matter Sources . . . . .                        | 121        |
| 7.1.3    | Einstein Equations . . . . .                                        | 122        |
| 7.2      | The Dynamical Energy-Momentum Tensor . . . . .                      | 123        |
| 7.2.1    | Examples: Scalar and Vector Fields, Point-Like Sources . . . . .    | 125        |
| 7.3      | The Einstein Equations with a Cosmological Constant . . . . .       | 128        |
| 7.4      | Energy-Momentum Conservation and Motion of Test Bodies . . . . .    | 131        |
|          | Exercises Chap. 7 . . . . .                                         | 137        |
|          | Solutions . . . . .                                                 | 138        |
| <b>8</b> | <b>The Weak-Field Approximation . . . . .</b>                       | <b>141</b> |
| 8.1      | Linearized Einstein Equations . . . . .                             | 141        |
| 8.1.1    | The Harmonic Gauge . . . . .                                        | 143        |

|           |                                                                         |     |
|-----------|-------------------------------------------------------------------------|-----|
| 8.2       | Space–Time Metric for a Weak and Static Field. . . . .                  | 144 |
| 8.3       | The Bending of Light Rays . . . . .                                     | 146 |
| 8.4       | The Radar-Echo Delay . . . . .                                          | 149 |
| 8.5       | Velocity Measurements in the Presence of Gravity. . . . .               | 151 |
|           | Exercises Chap. 8 . . . . .                                             | 153 |
|           | Solutions. . . . .                                                      | 154 |
