

Contents

1	Ground Source Heat Pump	1
1.1	Classification	1
1.2	Operating Principles and Performance	2
1.3	Ground Heat Exchangers	5
1.4	Free Cooling Energy from the Ground	7
	References.	8
2	Solar Thermal Collectors	9
2.1	Typologies and Working Principle	9
2.1.1	Unglazed Collectors	9
2.1.2	Flat Plate Glazed Collectors	10
2.1.3	Evacuated Tubes Collectors	10
2.2	System Configuration	11
2.3	Performance	13
	References.	15
3	Solar Assisted Ground Source Heat Pump	17
3.1	Overview of the System Components.	17
3.2	System Configurations	20
3.3	Operating Modes	21
3.4	Dynamic Energy Performance Assessment.	23
3.4.1	Dynamic Model in TRNSYS	23
3.4.2	Energy Performance Indicators	25
3.4.3	Long Terms Performance	27
	References.	28
4	Performance Assessment in Different Climates	31
4.1	Cold Climate	31
4.2	Temperate and Mild Climates.	43

4.3	Hot Climate	49
4.4	Special Case, PV System Integration	50
	References.	51
5	Conclusion	53

Solar Assisted Ground Source Heat Pump Solutions
Effective Energy Flows Climate Management

Reda, F.

2017, XX, 56 p. 36 illus., 22 illus. in color., Softcover

ISBN: 978-3-319-49696-2
