

Contents

1	Nonlinear Input–Output Stability	1
1.1	Input–Output Maps on Extended L_q -Spaces	1
1.2	L_q -Stability and L_q -Gain; Closed-Loop Stability	4
1.3	Input–Output Maps from State Space Models	9
1.4	Notes for Chapter 1	12
2	Small-Gain and Passivity for Input–Output Maps	13
2.1	The Small-Gain Theorem	13
2.2	Passivity and the Passivity Theorems	17
2.3	Loop Transformations	26
2.4	Scattering and the Relation Between Passivity and L_2 -Gain	26
2.5	Notes for Chapter 2	30
3	Dissipative Systems Theory	33
3.1	Dissipative Systems	33
3.2	Stability of Dissipative Systems	43
3.3	Interconnections of Dissipative Systems	49
3.4	Scattering of State Space Systems	51
3.5	Dissipativity and the Return Difference Inequality	52
3.6	Notes for Chapter 3	55
4	Passive State Space Systems	59
4.1	Characterization of Passive State Space Systems	59
4.2	Stability and Stabilization of Passive Systems	65
4.3	The Passivity Theorems Revisited	69
4.4	Network Interconnection of Passive Systems	76
4.5	Passivity of Euler–Lagrange Equations	84
4.6	Passivity of Second-Order Systems and Riemannian Geometry	86
4.7	Incremental and Shifted Passivity	94
4.8	Notes for Chapter 4	97

5	Passivity by Feedback	101
5.1	Feedback Equivalence to a Passive System	101
5.2	Stabilization of Cascaded Systems	106
5.3	Stabilization by Backstepping	108
5.4	Notes for Chapter 5	111
6	Port-Hamiltonian Systems	113
6.1	Input-State-Output Port-Hamiltonian Systems	113
6.2	Mechanical Systems	118
6.3	Port-Hamiltonian Models of Electromechanical Systems	125
6.4	Properties of Port-Hamiltonian Systems	131
6.5	Shifted Passivity of Port-Hamiltonian Systems	135
6.6	Dirac Structures	140
6.7	Port-Hamiltonian DAE Systems	148
6.8	Port-Hamiltonian Network Dynamics	154
6.9	Scattering of Port-Hamiltonian Systems	163
6.10	Notes for Chapter 6	167
7	Control of Port-Hamiltonian Systems	173
7.1	Stabilization by Interconnection	173
7.2	Passivity-Based Control	185
7.3	Control by Energy-Routing	194
7.4	Notes for Chapter 7	195
8	L_2-Gain and the Small-Gain Theorem	199
8.1	L_2 -Gain of State Space Systems	199
8.2	The Small-Gain Theorem Revisited	201
8.3	Network Version of the Small-Gain Theorem	206
8.4	L_2 -Gain as Response to Periodic Input Functions	208
8.5	Relationships with IIS- and iIIS-Stability	209
8.6	Notes for Chapter 8	211
9	Factorizations of Nonlinear Systems	213
9.1	Stable Kernel and Image Representations	213
9.2	L_2 -Gain Perturbation Models	219
9.3	Stable Kernel Representations and Parametrization of Stabilizing Controllers	221
9.4	All-Pass Factorizations	227
9.5	Notes for Chapter 9	238
10	Nonlinear \mathcal{H}_∞ Control	241
10.1	State Feedback \mathcal{H}_∞ Control	242
10.2	Output Feedback \mathcal{H}_∞ Control	252
10.3	Notes for Chapter 10	265

11 Hamilton–Jacobi Inequalities 269

11.1 Solvability of Hamilton–Jacobi Inequalities 269

11.2 An Aside on Optimal Control. 281

11.3 Dissipativity of a Nonlinear System and Its Linearization 287

11.4 \mathcal{H}_∞ Control of a Nonlinear System and Its Linearization. 291

11.5 Notes for Chapter 11 301
