Contents

1 Peptide Synthesis of Libraries of Non-natural Amino Acids 1
1.1 Statement of the Problem 1
1.2 Solid-Phase Organic Synthesis 4
1.2.1 Specific of SPOS 4
1.2.2 Polymers Used 5
1.2.3 Methodology and Principal Stages of SPOS 6
1.3 Practical Implementation of the Task 12
1.3.1 Stage 1: Immobilization of Amino Acids on Supports 12
1.3.2 Stage 2: Removal of Protective Groups 16
1.3.3 Synthesis of Heterocycles with a Readily Leaving Group 18
1.3.4 Realization of Stage 3 (Solid-Phase Nucleophilic Substitution) and Stage 4 (Product Removal from Polymer Support) 19
1.4 Conclusions 26
References. 27

2 The Choice of Tools for Implementing Multistage Transformations. SPOS for Beginners. 29
2.1 Bill-Board Technique 30
2.1.1 Chemical Aspect of the Task 30
2.1.2 Specific Features of the Bill-Board Kit 31
2.1.3 A Brief Description of the Task 32
2.1.4 Reagents Used 32
2.1.5 Implementation of the Task. 34
2.2 Tea-Bag Technique. 39
2.2.1 Reaction Sequence 39
2.2.2 Implementation of the Work 40
2.3 Syntheses with Lantern Rods 44
2.3.1 Choice of Model Reaction 47

2.3.2 Transformation Sequence and Methodical Notes 48
2.3.3 Preparation of *N*,*N*′,N″-Trisubstituted Guanidines on Lanterns 51
2.4 Conclusions 54
References 54

3 Secrets of Parallel Liquid-Phase Synthesis 57
3.1 Technology of Parallel LPOS 58
3.1.1 Parallel Refluxing 59
3.1.2 Parallel Boiling Without Condensers 59
3.1.3 Synthesis in Microwave Ovens 61
3.1.4 Syntheses in Flow Microreactors 61
3.2 Separation of the Reaction Mixtures 63
3.2.1 Parallel Extraction 63
3.2.2 Parallel Filtration 64
3.2.3 Parallel Centrifugation 66
3.2.4 Evaporation of Solutions 67
3.2.5 Parallel Purification 67
3.3 Conclusions 70
References 71

4 Most Combinatorial LPOS Reaction: Reductive Amination with a Scavenger 73
4.1 Reductive Amination 73
4.2 Synthesis Without Special Equipment 75
4.3 Technology of Microsynthesis in Plates 80
4.4 Liquid-Phase Parallel Synthesis in SynCore Apparatus 83
4.5 Conclusions 88
References 88

5 A Parallel Ugi Reaction 91
5.1 Basic Information on the Ugi Reaction 92
5.2 Experience in Accomplishing the Ugi Reaction Without Special Equipment 92
5.2.1 Practical Implementation of the Work 94
5.3 Variant of Implementing the Task with SynCore 98
5.3.1 Practical Implementation of the Task 99
5.4 Conclusions 100
References 101

6 Combinatorial Heterocyclic Chemistry in Higher School 103
6.1 Certain Applied Aspects of Heterocyclic Chemistry 103
6.2 Synthesis of Antimicrobial Aminodienes 105
6.3 Synthesis of 5-Aminoindolizines with Adrenergic Activity 106
6.4 Synthesis of Imidazole Anxiolytics 108

6.5 Biologically Active 2-Aminoimidazoles 108
6.6 Other Examples of Practical Application of New Reactions 111
6.7 Conclusions 114
References 115
