

Contents

1	Introduction	1
1.1	Calculus Prerequisites	1
1.2	Differential Equations and Their Solutions	3
1.3	Initial and Boundary Conditions	6
1.4	Classification of Differential Equations	9
2	First-Order Equations	15
2.1	Separable Equations	15
2.2	Linear Equations	20
2.3	Homogeneous Polar Equations	24
2.4	Bernoulli Equations	27
2.5	Riccati Equations	29
2.6	Exact Equations	31
2.7	Existence and Uniqueness Theorems	36
2.8	Direction Fields	41
3	Mathematical Models with First-Order Equations	43
3.1	Models with Separable Equations	43
3.2	Models with Linear Equations	46
3.3	Autonomous Equations	51
4	Linear Second-Order Equations	63
4.1	Mathematical Models with Second-Order Equations	63
4.2	Algebra Prerequisites	64
4.3	Homogeneous Equations	68
4.3.1	Initial Value Problems	69
4.3.2	Boundary Value Problems	71
4.4	Homogeneous Equations with Constant Coefficients	74
4.4.1	Real and Distinct Characteristic Roots	74
4.4.2	Repeated Characteristic Roots	77
4.4.3	Complex Conjugate Characteristic Roots	80
4.5	Nonhomogeneous Equations	83
4.5.1	Method of Undetermined Coefficients: Simple Cases	83

4.5.2	Method of Undetermined Coefficients: General Case	90
4.5.3	Method of Variation of Parameters	95
4.6	Cauchy–Euler Equations	98
4.7	Nonlinear Equations	102
5	Mathematical Models with Second-Order Equations	105
5.1	Free Mechanical Oscillations	105
5.1.1	Undamped Free Oscillations	105
5.1.2	Damped Free Oscillations	108
5.2	Forced Mechanical Oscillations	111
5.2.1	Undamped Forced Oscillations	111
5.2.2	Damped Forced Oscillations	113
5.3	Electrical Vibrations	115
6	Higher-Order Linear Equations	119
6.1	Modeling with Higher-Order Equations	119
6.2	Algebra Prerequisites	119
6.2.1	Matrices and Determinants of Higher Order	120
6.2.2	Systems of Linear Algebraic Equations	121
6.2.3	Linear Independence and the Wronskian	125
6.3	Homogeneous Differential Equations	128
6.4	Nonhomogeneous Equations	132
6.4.1	Method of Undetermined Coefficients	132
6.4.2	Method of Variation of Parameters	136
7	Systems of Differential Equations	139
7.1	Modeling with Systems of Equations	139
7.2	Algebra Prerequisites	141
7.2.1	Operations with Matrices	141
7.2.2	Linear Independence and the Wronskian	147
7.2.3	Eigenvalues and Eigenvectors	149
7.3	Systems of First-Order Differential Equations	152
7.4	Homogeneous Linear Systems with Constant Coefficients	155
7.4.1	Real and Distinct Eigenvalues	157
7.4.2	Complex Conjugate Eigenvalues	162
7.4.3	Repeated Eigenvalues	167
7.5	Other Features of Homogeneous Linear Systems	174
7.6	Nonhomogeneous Linear Systems	179
8	The Laplace Transformation	189
8.1	Definition and Basic Properties	189
8.2	Further Properties	195
8.3	Solution of IVPs for Single Equations	200
8.3.1	Continuous Forcing Terms	200
8.3.2	Piecewise Continuous Forcing Terms	205
8.3.3	Forcing Terms with the Dirac Delta	208
8.3.4	Equations with Variable Coefficients	212
8.4	Solution of IVPs for Systems	215

9 Series Solutions	221
9.1 Power Series	221
9.2 Series Solution Near an Ordinary Point	222
9.3 Singular Points	228
9.4 Solution Near a Regular Singular Point	230
9.4.1 Distinct Roots That Do Not Differ by an Integer	231
9.4.2 Equal Roots	235
9.4.3 Distinct Roots Differing by an Integer	239
10 Numerical Methods	247
10.1 The Euler Method	247
10.2 The Euler Midpoint Method	252
10.3 The Improved Euler Method	254
10.4 The Runge–Kutta Method	256
A Algebra Techniques	259
A.1 Partial Fractions	259
A.2 Synthetic Division	261
B Calculus Techniques	263
B.1 Sign of a Function	263
B.2 Integration by Parts	263
B.3 Integration by Substitution	264
B.4 Overview of the Hyperbolic Functions	264
C Table of Laplace Transforms	267
D The Greek Alphabet	269
Further Reading	271
Answers to Odd-Numbered Exercises	273
Index	295

Differential Equations

A Primer for Scientists and Engineers

Constanda, C.

2017, XVII, 297 p. 40 illus., Hardcover

ISBN: 978-3-319-50223-6
