

Contents

1	Introduction	1
1.1	Contents of the Book	1
1.2	The Subject Field	2
1.3	The Development of the Subject Field Before the Last Millennium Shift	5
1.4	Recent Developments in Gravimetric Theory and Data	7
1.4.1	Development of Gravimetric Data	7
1.4.2	Development of Theory	8
1.5	Reference System, Reference Frame and Datum	10
1.5.1	More on Reference Systems	14
1.5.2	Different Types of Reference Systems	15
1.5.3	Major Geodynamical Effects on Reference Frames	17
1.5.4	Geodetic Reference System 1980	22
	References	23
2	Basic Mathematics	27
2.1	Least Squares Adjustment Theory	27
2.1.1	Adjustment by Elements	28
2.2	Least Squares Collocation	32
2.2.1	Discrete Collocation	32
2.2.2	Continuous Collocation	33
2.3	Coordinate Systems	35
2.4	Legendre's Polynomials	41
2.5	Spherical Harmonics	43
2.5.1	Spectral Filtering and Combination	46
2.6	Ellipsoidal Harmonics	56
2.7	Fundamentals of Potential Theory	57
2.7.1	Basic Concepts and Formulas	57
2.7.2	Laplace's and Poisson's Equations	60
2.7.3	Laplace's Equation and Its Solution in Spherical Coordinates	61

2.7.4	Gauss' and Green's Integral Formulas	62
2.7.5	Boundary Value Problems.	65
2.8	Regularization.	66
2.8.1	Tikhonov Regularization.	69
2.8.2	Wiener Filtering	72
2.8.3	Spectral Smoothing	74
2.8.4	Spectral Combination	74
2.8.5	Optimum Regularization	76
2.8.6	Spherical Harmonic Analysis	78
2.8.7	Comparison.	79
2.8.8	Concluding Remarks.	80
	Appendix: Answers to Exercises.	80
	References.	81
3	Classical Physical Geodesy	83
3.1	Introduction	83
3.2	Basic Concepts in Physical Geodesy	84
3.2.1	The Gravity Field	84
3.2.2	The Gravity Field of the Level Ellipsoid.	85
3.2.3	The Disturbing Potential, Geoid and Gravity Anomaly.	89
3.2.4	Harmonic Expansion of the Gravity Field.	92
3.3	Integral Formulas in Physical Geodesy.	93
3.3.1	Poisson's Integral	94
3.3.2	Stokes' Formula	94
3.3.3	Hotine's Formula	96
3.3.4	Vening Meinesz' Integrals	97
3.3.5	The Vertical Gradient of Gravity	98
3.3.6	The Inverse Vening Meinesz Formula.	99
3.3.7	The Geoid-from-Deflection Formula	101
3.3.8	Gradiometry Formulas on the Sphere	102
3.4	Practical Considerations (DITE, DWC, SITE, PITE)	106
3.4.1	The Free-Air Correction	106
3.4.2	The Bouguer Correction	107
3.4.3	The Direct Topographic Effect (DITE)	108
3.4.4	The SITE, Co-geoid and the PITE	108
3.5	Height Systems.	110
3.5.1	Geopotential Numbers.	110
3.5.2	Orthometric Heights	111
3.5.3	Normal Heights.	112
3.5.4	Normal-Orthometric Heights	113
	Appendix 1: Closed-Form Kernels	115
	Appendix 2: Solutions to Exercises.	116
	References.	118

4 Modern Physical Geodesy	121
4.1 Introduction	121
4.2 The Quasigeoid, Surface Gravity Anomaly and Disturbance	126
4.3 Geoid Determination by Spherical Harmonics	128
4.4 The Modified Stokes' Formula	130
4.4.1 General Modification of Stokes' Formula	130
4.4.2 Remove-Restore Techniques	133
4.4.3 Modifications Reducing the Truncation Error	134
4.4.4 The Least Squares Modification of $N_1^{L,M}$ and $N_2^{L,M}$	137
4.4.5 Satellite Only Low Degree Modifications	142
4.4.6 Modifications with High-Degree EGMs	144
4.5 Summary of Modified Stokes' Formula Techniques	145
4.6 The Modified Hotine Formula	145
References	147
5 Corrections in Geoid Determination	149
5.1 Introduction	149
5.2 Topographic Corrections	150
5.2.1 The Topographic Potential and Gravity Anomaly	151
5.2.2 The Indirect Effect on the Geoid	152
5.2.3 The Combined Effect on the Geoid	153
5.2.4 Zero- and First-Degree Effects	153
5.2.5 The Topographic Bias by a Strict Formulation	155
5.2.6 The EGM Analytical Continuation Error (EACE)	159
5.2.7 The Topographic Bias in the Modified Stokes' Formula	164
5.2.8 Lateral Topographic Density Variations	166
5.3 The Downward Continuation Correction	167
5.3.1 The Dwc Effect on the Original Stokes' Formula	167
5.3.2 The Dwc Effect for the Modified Stokes' Formula	170
5.4 Atmospheric Corrections	171
5.4.1 The IAG Approach	171
5.4.2 The KTH Approach	172
5.5 Ellipsoidal Corrections	174
5.5.1 Components of the Ellipsoidal Correction of Stokes' Formula	175
5.5.2 The Ellipsoidal Correction as a Harmonic Series and a Stokes' Integral	176
5.6 Corrections in Quasigeoid Determination	179
References	179

6 Applications and Comparisons of LSMSA and RCR	181
6.1 Introduction	181
6.2 Geoid Determination	182
6.2.1 Remove-Compute-Restore Technique	182
6.2.2 Least Squares Modification of Stokes' Formula with Additive Corrections (LSMSA)	183
6.3 Quasigeoid Determination	184
6.3.1 The RCR Technique	184
6.3.2 The LSMSA Method	185
6.4 A Theoretical Comparison of the RCR and LSMSA Methods	186
6.5 Practical Experiences of LSMSA	188
6.5.1 The Choice of Error Degree Variances	188
6.5.2 Which EGM Should Be Used?	191
6.5.3 Choice of Cap Size	192
6.5.4 Numerical Considerations in Determining Modification Parameters	192
6.5.5 Comparison of DWC in LSMSA and Other Methods	193
6.6 Case Studies	193
6.6.1 Comparisons of Methods	193
6.6.2 NKG Quasigeoid Model 2015 (NKG2015 Geoid)	197
6.7 Concluding Remarks	199
References	200
7 Further Tools in Physical Geodesy	203
7.1 Quasigeoid Determination	203
7.1.1 Molodensky's Method	204
7.1.2 Bjerhammar's Method and Collocation	205
7.1.3 Analytical Continuation at Point Level	208
7.2 Comparison of Geoid and Quasigeoid Models	210
7.2.1 The Geoid Versus the Quasigeoid: A Practical View	213
7.2.2 Precise Orthometric Heights	214
7.3 Combinations of Gravimetric and Geometric Geoid Solutions	214
7.3.1 Geometric Geoid Mapping	214
7.3.2 Least Squares Combination of Gravimetric and Geometric Geoid Data	217
7.3.3 GNSS Levelling	220
7.4 The Determination of W_0	220
7.4.1 Introduction	220
7.4.2 Approach I: Direct Determination of W_0 from Satellite Altimetry and an EGM	221
7.4.3 Approach II: Joint Determination of W_0 and the MEE Parameters	225
7.4.4 Final Remarks	229

7.5	Spectral Smoothing and Combination	229
7.5.1	Introduction	229
7.5.2	Spectral Smoothing of SGG Data	230
7.5.3	Spectral Combination of Satellite Gravity-Gradiometry Data and an Earth Gravitational Model	233
7.5.4	Spectral Combination of Data from Terrestrial Gravity, SGG and an EGM.	237
7.5.5	Spectral Smoothing and Combination with Airborne Gravity Data	239
7.5.6	Concluding Remarks	241
7.6	Applications of Atomic Clocks in Physical Geodesy	241
	Appendix	242
	References	243
8	Gravity Inversion	247
8.1	Introduction	247
8.1.1	Basic Geophysical Concepts	248
8.2	Basic Formulas in Inversion of Satellite Gravity-Field Models	251
8.2.1	Regional Studies	257
8.2.2	Determination of Simple Mass Structures	258
8.3	Bouguer, No-Topography and Isostatic Gravity Anomalies and Disturbances	261
8.4	Isostasy	267
8.4.1	Crustal Thickness and Isostasy	268
8.4.2	Crustal Thickness Models	271
8.5	Moho Determination by Vening Meinesz-Moritz Theory	286
8.5.1	Formulating the Mathematical Problem	287
8.5.2	Formulating the Integral Equation	287
8.5.3	Solving the Integral Equation to Second Order	289
8.5.4	Additive Gravity Corrections	291
8.5.5	The Non-isostatic Effects	296
8.5.6	Thermal-Pressure Effect Due to Lithosphere-Mantle Density	298
8.5.7	Combined Moho Determination	305
8.5.8	Moho Recovery Using Gravitational Gradient Data	311
8.6	Tectonic Stress in the Mantle	319
8.6.1	Stress	320
8.6.2	Different Kinds of Stress	321
8.6.3	Determining Stress Using Geometric-Geodesy Techniques	325
8.6.4	Determining Stress by Disturbing Potential Components	329

8.7	Temporal Changes of the Gravity Field	334
8.7.1	Satellite-Based Methods to Study Temporal Variations. . . .	334
8.7.2	Temporal Changes of the Geoid	335
8.8	Viscosity in the Mantle.	345
8.8.1	Geophysical Approaches	345
8.8.2	Rheology and Its Relationship to Viscosity.	346
8.8.3	A Geodetic Approach	352
8.8.4	Estimating the Remaining Land Uplift from the Geoid Depression	353
8.8.5	Estimating the Geoid Height and Absolute Uplift Rates.	354
8.8.6	The Decay Time	356
8.8.7	Remaining Uplift Versus Power of Uplift Rate.	358
8.8.8	Upper-Mantle Viscosity	359
8.8.9	Viscosity Determination Using GRACE Data	362
	References.	364
9	Concluding Remarks and Outlook.	375
	References.	377
