## Part I General Description of a Laser and an Example

<b>1</b>	<b>Introduction</b>	3
1.1	Laser and Light Bulb	3
1.2	Spectral Ranges of Lasers and List of a Few Lasers	4
1.3	Laser Safety	6
1.4	Sizes of Lasers, Cost of Lasers, and Laser Market	7
1.5	Questions about the Laser	8
1.6	Different Types of Lasers in the Same Spectral Range	9
1.7	Concept of the Book	9
1.8	References	11
1.9	A Remark About the History of the Laser	11
	Problems	14
<b>2</b>	<b>Laser Principle</b>	17
2.1	A Laser	18
2.2	Coherent Electromagnetic Wave	18
2.3	An Active Medium	22
2.4	Laser Resonator	26
2.5	Laser = Laser Oscillator	32
2.6	Radiation Feedback and Threshold Condition	32
2.7	Frequency of Laser Oscillation	35
2.8	Data of Lasers	36
2.9	Oscillation Onset Time	38
	Problems	40
<b>3</b>	<b>Fabry–Perot Resonator</b>	43
3.1	Laser Resonators and Laser Mirrors	43
3.2	V Factor and Related Quantities	45
3.3	Number of Photons in a Resonator Mode	46
3.4	Ideal Mirror	47

3.5	Fabry–Perot Interferometer . . . . .	48
3.6	Resonance Curve of a Fabry–Perot Resonator . . . . .	51
3.7	Fabry–Perot Resonator Containing a Gain Medium . . . . .	52
	Problems . . . . .	54
<b>4</b>	<b>The Active Medium: Energy Levels and Lineshape Functions . . . . .</b>	<b>57</b>
4.1	Two-Level Based and Energy-Ladder Based Lasers . . . . .	58
4.2	Four-Level, Three-Level, and Two-Level Lasers . . . . .	59
4.3	Two-Band Laser and Quasiband Laser . . . . .	61
4.4	Lineshape: Homogeneous and Inhomogeneous Line Broadening . . . . .	63
4.5	Lorentz Functions . . . . .	64
4.6	Gaussian Lineshape Function . . . . .	68
4.7	Experimental Linewidths . . . . .	69
4.8	Classical Oscillator Model of an Atom . . . . .	69
4.9	Natural Line Broadening . . . . .	71
4.10	Energy Relaxation . . . . .	72
4.11	Dephasing . . . . .	73
4.12	Dipole Oscillator and Monopole Oscillator . . . . .	73
4.13	Three-Dimensional and Low-Dimensional Active Media . . . . .	74
	Problems . . . . .	75
<b>5</b>	<b>Titanium–Sapphire Laser . . . . .</b>	<b>77</b>
5.1	Principle of the Titanium–Sapphire Laser . . . . .	77
5.2	Design of a Titanium–Sapphire Laser . . . . .	79
5.3	Absorption and Fluorescence Spectra of Titanium–Sapphire . . . . .	80
5.4	Population of the Upper Laser Level . . . . .	81
5.5	Heat and Phonons . . . . .	82
	Problems . . . . .	82
 <b>Part II Theoretical Basis of the Laser</b>		
<b>6</b>	<b>Basis of the Theory of the Laser: The Einstein Coefficients . . . . .</b>	<b>85</b>
6.1	Light and Atoms in a Cavity . . . . .	85
6.2	Spontaneous Emission . . . . .	87
6.3	Absorption . . . . .	88
6.4	Stimulated Emission . . . . .	88
6.5	The Einstein Relations . . . . .	89
6.6	Einstein Coefficients on the Energy Scale . . . . .	92
6.7	Stimulated Versus Spontaneous Emission . . . . .	92
6.8	Transition Probabilities . . . . .	94
6.9	Determination of Einstein Coefficients from Wave Functions . . . . .	95
	Problems . . . . .	96

<b>7</b>	<b>Amplification of Coherent Radiation</b>	<b>97</b>
7.1	Interaction of Monochromatic Radiation with an Ensemble of Two-Level Systems	98
7.2	Growth and Gain Coefficient	100
7.3	Gain Cross Section	103
7.4	An Effective Gain Cross Section	106
7.5	Gain Coefficients	108
7.6	Gain Coefficient of Titanium–Sapphire	109
7.7	Gain Coefficient of a Medium with an Inhomogeneously Broadened Line	111
7.8	Gain Characteristic of a Two-Dimensional Medium	112
7.9	Gain of Light Crossing a Two-Dimensional Medium	114
	Problems	115
<b>8</b>	<b>A Laser Theory</b>	<b>119</b>
8.1	Rate Equations	119
8.2	Steady State Oscillation of a Laser	121
8.3	Balance Between Production and Loss of Photons	123
8.4	Onset of Laser Oscillation	124
8.5	Clamping of Population Difference	126
8.6	Optimum Output Coupling	127
8.7	Two Laser Rate Equations	130
8.8	Relaxation Oscillation	131
8.9	Laser Linewidth	133
	Problems	136
<b>9</b>	<b>Driving a Laser Oscillation</b>	<b>137</b>
9.1	Maxwell's Equations	138
9.2	Possibilities of Driving a Laser Oscillation	142
9.3	Polarization of an Atomic Medium	142
9.4	Quantum Mechanical Expression of the Susceptibility of an Atomic Medium	145
9.5	Polarization of an Active Medium	149
9.6	Polarization Current	151
9.7	Laser Oscillation Driven by a Polarization	154
9.8	Relaxation of the Polarization	162
9.9	Laser Equations	164
9.10	Laser-van der Pol Equation	168
9.11	Kramers–Kronig Relations	170
9.12	Lorentz Functions: A Survey	171
9.13	A Third Remark About the History of the Laser	172
	Problems	175

### Part III Operation of a Laser

<b>10 Cavity Resonator</b> .....	181
10.1 Cavity Resonators in Various Areas .....	181
10.2 Modes of a Cavity Resonator .....	182
10.3 Modes of a Long Cavity Resonator .....	186
10.4 Density of Modes of a Cavity Resonator .....	187
10.5 Fresnel Number .....	189
10.6 TE Waves and TM Waves .....	190
10.7 Quasioptical Arrangement .....	191
Problems .....	192
<b>11 Gaussian Waves and Open Resonators</b> .....	195
11.1 Open Resonator .....	196
11.2 Helmholtz Equation .....	198
11.3 Gaussian Wave .....	200
11.4 Confocal Resonator .....	207
11.5 Stability of a Field in a Resonator .....	210
11.6 Transverse Modes .....	214
11.7 The Gouy Phase .....	219
11.8 Diffraction Loss .....	223
11.9 Ray Optics .....	225
Problems .....	231
<b>12 Different Ways of Operating a Laser</b> .....	235
12.1 Possibilities of Operating a Laser .....	235
12.2 Operation of a Laser on Longitudinal Modes .....	236
12.3 Single Mode Laser .....	236
12.4 Tunable Laser .....	237
12.5 Spectral Hole Burning in Lasers Using Inhomogeneously Broadened Transitions .....	238
12.6 Q-Switched Lasers .....	239
12.7 Longitudinal and Transverse Pumping .....	241
12.8 An Application of CW Lasers: The Optical Tweezers .....	242
12.9 Another Application: Gravitational Wave Detector .....	243
Problems .....	244
<b>13 Femtosecond Laser</b> .....	245
13.1 Mode Locking .....	246
13.2 Active and Passive Mode Locking .....	251
13.3 Onset of Oscillation of a Mode-Locked Titanium-Sapphire Laser .....	253
13.4 Optical Frequency Comb .....	254
13.5 Optical Correlator .....	259
13.6 Pump-Probe Method .....	261

13.7	Femtosecond Pulses in Chemistry . . . . .	261
13.8	Optical Frequency Analyzer . . . . .	262
13.9	Terahertz Time Domain Spectroscopy . . . . .	263
13.10	Attosecond Pulses . . . . .	265
	Problems . . . . .	266
 <b>Part IV Types of Lasers (Except Semiconductor Lasers)</b>		
<b>14</b>	<b>Gas Lasers.</b> . . . .	271
14.1	Doppler Broadening of Spectral Lines . . . . .	271
14.2	Collision Broadening . . . . .	273
14.3	Helium–Neon Laser . . . . .	275
14.4	Metal Vapor Laser . . . . .	277
14.5	Argon Ion Laser . . . . .	278
14.6	Excimer Laser . . . . .	279
14.7	Nitrogen Laser . . . . .	280
14.8	CO <sub>2</sub> Laser . . . . .	281
14.9	Other Gas Discharge Lasers and Optically Pumped Far Infrared Lasers . . . . .	284
	Problems . . . . .	286
<b>15</b>	<b>Solid State Lasers</b> . . . . .	291
