Part I Transition Systems, Automata, and Temporal Logics

1	Transition Systems	3
1.1	Definitions and Examples	3
1.2	Discrete-Time Dynamical Systems as Transition Systems	13
1.3	Simulation and Bisimulation	16
1.4	Notes	24
2	Temporal Logics and Automata	27
2.1	Linear Temporal Logic	27
2.2	Automata	31
2.3	Notes	36

Part II Analysis and Control of Finite Transition Systems

3	Model Checking	41
3.1	Notes	46
4	Largest Finite Satisfying Region	47
4.1	Model-Checking-Based Solution	50
4.2	Abstraction-Based Solution	52
4.3	Iterative Strategies	56
4.4	Conservative Quotient Refinement	58
4.5	Formula-Equivalence	67
4.6	Notes	78
5	Finite Temporal Logic Control	81
5.1	Control of Transition Systems from LTL Specifications	82
5.2	Control of Transition Systems from dLTL Specifications	95
5.3	Control of Transition Systems from scLTL Specifications	103
5.4	Notes	106

Part III Analysis and Control of Discrete-Time Dynamical Systems

6	Discrete-Time Dynamical Systems	111
6.1	Piecewise Affine Systems	111
6.2	Switched Linear Systems	116
6.3	Notes	117
7	Largest Satisfying Region	119
7.1	PWA Systems with Fixed and Additive Uncertain Parameters	120
7.2	PWA Systems with Uncertain Parameters	128
7.3	Formula-Guided Refinement	135
7.4	Notes	137
8	Parameter Synthesis	141
8.1	Counterexample-Guided Pruning of Finite Systems	143
8.2	Parameter Sets and Transitions	147
8.3	Transient Parameters	151
8.4	Parameter Synthesis for PWA Systems	152
8.5	Parameter Synthesis Using Bisimulations	157
8.6	Notes	159
9	Temporal Logic Control	163
9.1	Control Abstraction	164
9.1.1	Definition	164
9.1.2	Computation	166
9.2	LTL Control of PWA Systems	169
9.3	Conservatism and Stuttering Behavior	170
9.4	Notes	180
10	Finite Bisimulations	185
10.1	Bisimulation Quotient	188
10.1.1	Level Sets and Slices	188
10.1.2	Abstraction Algorithm	190
10.1.3	Extensions	193
10.1.4	Complexity	195
10.2	Synthesis and Verification	199
10.2.1	Synthesis	199
10.2.2	Verification	200
10.3	Notes	203
11	Language Guided Controller Synthesis	205
11.1	Dual Automaton Construction and Simplification	207
11.2	Dual Automaton Refinement	213
11.2.1	Transition Controllers	214

11.2.2	Refinement	215
11.2.3	Partitioning	216
11.3	Control Strategy	221
11.4	Notes	229
12	Optimal Temporal Logic Control	231
12.1	Automaton Generation	232
12.2	Lyapunov-Type Functions for Dual Automaton	233
12.2.1	Potential Function	233
12.2.2	Contractive Potential Function	236
12.3	MPC Strategies	238
12.3.1	MPC with Terminal Constraints	239
12.3.2	MPC with Terminal Cost	245
12.4	Notes	254
	Appendix A: Background	257
	References	273
	Index	283

Formal Methods for Discrete-Time Dynamical Systems

Belta, C.; Yordanov, B.; GÖL, E.

2017, XVIII, 284 p. 93 illus., 39 illus. in color., Hardcover

ISBN: 978-3-319-50762-0
