

Contents

1	Short Course in Thermal Physics and Statistical Mechanics	1
1.1	Introduction	1
1.2	Ideal Gas	5
1.3	Bose–Einstein Distribution Function	7
1.4	Fermi–Dirac Distribution Function	14
1.4.1	The Grand Partition Function and Other Thermodynamic Functions	15
1.4.2	The Fermi–Dirac Distribution Function	18
1.5	Ideal Fermi Gas	26
1.6	Ideal Dense Plasma	39
1.6.1	Thermodynamic Relations	40
1.6.2	Ideal Gas and Saha Ionization	41
1.7	Thomas–Fermi Theory	44
1.7.1	Basic Thomas–Fermi Equations	54
	References	58
2	Essential Physics of Inertial Confinement Fusion (ICF)	61
2.1	Introduction	61
2.2	General Concept of Electromagnetisms and Electrostatics	62
2.2.1	The Coulomb’s Law	63
2.2.2	The Electric Field	66
2.2.3	The Gauss’s Law	67
2.3	Solution of Electrostatic Problems	69
2.3.1	Poisson’s Equation	69
2.3.2	Laplace’s Equation	70
2.4	Electrostatic Energy	71
2.4.1	Potential Energy of a Group of Point Charges	71
2.4.2	Electrostatic Energy of a Charge Distribution	72
2.4.3	Forces and Torques	74
2.5	Maxwell’s Equations	78

2.6	Debye Length	80
2.7	Physics of Plasmas	82
2.8	Fluid Description of Plasma	92
2.9	Magneto-Hydrodynamics (MHD)	95
2.10	Physics of Dimensional Analysis Application in Inertial Confinement Fusion ICF	97
2.10.1	Dimensional Analysis and Scaling Concept	102
2.10.2	Similarity and Estimating	103
2.10.3	Self-Similarity	105
2.10.4	General Results of Similarity	108
2.10.5	Principles of Similarity	108
2.10.6	Self-Similarity Solutions of the First and Second Kind	109
2.11	Physics of Implosion and Explosion in ICF: Self-Similarity Methods	114
2.12	Self-Similarity and Sedov–Taylor Problem	118
2.13	Self-Similarity and Guderley Problem	124
	References	129
3	Physics of Inertial Confinement Fusion (ICF)	133
3.1	Introduction	133
3.2	Rates of Thermonuclear Reactions	134
3.3	Critical Ignition Temperature for Fusion	144
3.4	Controlled Thermonuclear Ideal Ignition Temperature	146
3.5	Lawson Criterion	149
3.5.1	Inertial Confinement and Lawson Criterion	154
3.6	Bremsstrahlung Radiation	155
3.6.1	Bremsstrahlung Plasma Radiation Losses	161
3.6.2	Bremsstrahlung Emission Rate	163
3.6.3	Additional Radiation Losses	168
3.6.4	Inverse Bremsstrahlung Radiation in Inertial Confinement Fusion	170
3.7	Rayleigh–Taylor Instability in Inertial Confinement Fusion	176
3.8	Richtmyer–Meshkov Instability in Inertial Confinement Fusion	186
3.9	Filamentation Instability in Inertial Confinement Fusion	187
3.10	Kelvin–Helmholtz Instability	188
	References	190
4	Inertial Confinement Fusion (ICF)	193
4.1	Introduction	193
4.2	Overview of Inertial Confinement Fusion (ICF)	201
4.3	Inertial Confinement Fusion (ICF) Process Steps	203

4.4	A Path Toward Inertial Fusion Energy	208
4.4.1	Direct-Drive Fusion	210
4.4.2	Indirect-Drive Fusion (The Hohlraum)	214
4.4.3	Single Beam Driver as Ignitor Concept (Fast Ignition)	217
4.5	Inertial Fusion Confinement Implosion and Explosion Process	218
4.5.1	Linear Compression Concept	224
4.5.2	Cylindrical Compression Concept	224
4.5.3	Spherical Compression Concept	225
4.6	Basic Consideration for Fusion Target Design	226
4.7	Targets for Direct-Drive Laser Inertial Fusion Energy	235
4.8	Z-Pinch Target	236
4.9	Target Fabrication	236
4.10	Conclusion	237
	References	237
Appendix A: Schrödinger Wave Equation		239
Appendix B: The Stirling Formula		255
Appendix C: Table of Fermi—Dirac Functions		259
Appendix D: Tables of Thomas—Fermi Corrected Equation of State		267
Appendix E: Lagrangian and Eulerian Coordinate Systems		281
Appendix F: Angular Plasma Frequency and High Power Laser		289
Appendix G: A Soliton Wave		299
References		309
