Part I Introduction and Classical Physics

1	A Short Introduction to Field Theories and Variational Approach.	3
1.1	What Is a Field Theory: A Naive View	3
1.2	Equations of Motion	6
1.2.1	Lagrangian Formalism	6
1.2.2	The Variational Approach	9
1.3	Field Equations and Variational Approach	13
1.3.1	The Euler–Lagrange Equations for the Fields	13
1.3.2	Poisson Equations from Variational Principles	16
1.4	Exercises	18
2	The Geometrical Character of Physics Theories.	23
2.1	A Scientific Theory as a Model	24
2.2	Geometry and Physics: Tools for Modeling the Reality	26
2.3	When Should a Scientific Theory Be Changed?	28
3	Fundamental Principles of Classical Physics.	29
3.1	Principle of Covariance	29
3.1.1	Euclidean Space	30
3.1.2	Euclidean Space and Time	34
3.1.3	Covariance Revisited	35
3.1.4	Rotational Covariance	38
3.2	Principle of (Galilean) Relativity	43
3.2.1	Principle of Relativity as a “Kinematic” Covariance Principle	44
3.3	Equivalence Principle	47
3.3.1	Equivalence Principle as a “Dynamic” Covariance Principle	49
3.4	Exercises	51

4	Classical Physics, Fundamental Principles, and Lagrangian Approach	57
4.1	Equations of Motion and Newtonian Gravitational Force.	57
4.2	Euler–Lagrange Equations	59
4.3	Lagrangian of a Free Particle and Variational Principles	62
4.4	Field Theories and Variational Approach: A “Not-so-Naive” View	64
4.4.1	Variational Approach and Field Equations: General Review	69
4.4.2	Newtonian Lagrangians: Poisson Equation and Its Extension	70
4.5	Classical Electromagnetism	72
 Part II Special Relativity		
5	Special Relativity Setting Up	79
5.1	Principle of Relativity Revisited.	79
5.1.1	Generalized “PoR-Aware” Transformations	80
5.1.2	Galilean and Lorentz Transformations	84
5.2	Experimental Footing of Special Relativity	86
5.3	Basic Principles of Special Relativity and Relativistic Dynamics.	88
5.4	Lorentz Transformations from a Geometrical Point of View . . .	94
5.4.1	The Physical Meaning of Covariance	94
5.4.2	Lorentz-Invariant Quantities and Measurements	95
5.4.3	Spacetime, Four-Dimensional Hyperbolic Geometry, and Manifest Lorentz Covariance	97
5.4.4	Minkowski Geometry	100
5.5	Exercises	103
6	Special Relativity in Minkowskian Spacetime.	115
6.1	Kinematics	116
6.2	Dynamics.	120
6.3	Lagrangian Formulation	126
6.3.1	Free Particles	128
6.3.2	General Free Particles’ Dynamics and Local Gauge Freedom	130
6.3.3	Particle Dynamics Under the Influence of a Scalar Field	134
6.3.4	Field Equations.	136
6.4	Exercises	138

7	Gravity and Special Relativity	143
7.1	Gravity as a Lorentz-Invariant Scalar Field	143
7.1.1	Equivalence Principle and “Geometrization” of Gravity	144
7.1.2	Particle Orbit and Perihelion Shift	147
7.2	Relativistic Gravity Sources: The Stress-Energy Tensor and the Equivalence Principle	150
7.3	Gravity Potential as a Nonscalar Relativistic Field	154
7.4	Equivalence Principle and Special Relativity: Accelerated Frames	155
7.5	Exercises	160
 Part III General Relativity and Beyond		
8	Lagrangian Formulation of General Relativity	167
8.1	Gravity and Geometry: Curved Spacetime and General Covariance	167
8.2	The Geodesic Equations	173
8.2.1	General Covariant Geodesic Equations	174
8.2.2	Classical Limit of the Geodesic Equations	178
8.3	Field Equations of General Relativity	180
8.3.1	Derivation of the Field Equations	183
8.3.2	Classical Limit of Field Equations	187
8.4	An Alternative Formulation: The Palatini Approach	189
8.5	Exercises	192
9	Applications	199
9.1	The Schwarzschild Solution of Field Equations	199
9.1.1	Pericenter Advance	203
9.1.2	Light Deflection	206
9.2	Linearized Gravity and Gravitational Waves	208
9.3	The Post-Newtonian Limit of General Relativity	212
9.4	Cosmology	218
9.4.1	The Cosmological Principle and the Friedmann–Lemaître–Robertson–Walker Metric	219
9.4.2	Friedmann Equations	224
9.4.3	Standard Cosmological Models	227
9.5	Exercises	231
10	Beyond General Relativity	239
10.1	General Relativity Beyond General Relativity	240
10.1.1	The Cosmological Constant: Einstein Versus General Relativity	241
10.1.2	Exotic Matter Lagrangians	244

10.2	Beyond the Metric Tensor	249
10.2.1	Mach's Principle	250
10.2.2	Mach's Principle and General Relativity	252
10.2.3	Mach's Principle and Scalar-Tensor Theories	254
10.3	Going Beyond in Different Ways	257
10.3.1	Beyond the Einstein–Hilbert Action	258
10.3.2	Beyond Spacetime	260
10.4	A Mathematical Tool for Testing Gravity Theories: The Parametrized Post-Newtonian Formalism	261
10.4.1	The PPN Formalism in a Nutshell	262
10.4.2	The Weak-Field Approximation of the Brans–Dicke Theory and Its PPN parameters	265
10.5	Exercises	266
Appendix A: Functionals and Calculus of Variations		273
Appendix B: Tensor Algebra in Euclidean Geometry		281
Appendix C: Special Relativity		301
Appendix D: Elements of Differential Geometry		331
