
Contents

Preamble	vii
Contents	xi
Guide to contents	xvii
Many reasons to write this book	xix
Special relativity matters	xxiii
Acceleration frontier of physics	xxiv
Frequently used abbreviations	xxv
Part I Space-Time, Light and the Æther	
1 Space-Time	3
1.1 Time, a new 4th coordinate	3
1.2 Measuring space and time	7
1.3 Speed of light and the æther	9
2 The Michelson-Morley Experiment	21
2.1 Earth’s motion and the æther	21
2.2 Principle of relativity	23
2.3 Cosmic microwave background frame of reference	27
3 Material Bodies in Special Relativity	29
3.1 Time dilation, body contraction	29
3.2 Reality of the Lorentz-FitzGerald body contraction	31
3.3 Path towards Lorentz coordinate transformations	39
3.4 Highlights: how did relativity ‘happen’?	41
	xi

Part II Time Dilation, and Lorentz-Fitzgerald Body Contraction

4	Time Dilation	47
4.1	Proper time of a traveler	47
4.2	Relativistic light-clock	51
5	The Lorentz-FitzGerald Body Contraction	61
5.1	Universality of time measurement	61
5.2	Parallel light-clock	62
5.3	Body contraction	63

Part III The Lorentz Transformation

6	Relativistic Coordinate Transformation	75
6.1	Derivation of the form of the Lorentz coordinate transformation	75
6.2	Explicit form of the Lorentz coordinate transformation	80
6.3	The nonrelativistic Galilean limit	85
6.4	The inverse Lorentz coordinate transformation	86
7	Properties of the Lorentz Coordinate Transformation	89
7.1	Relativistic addition of velocities	89
7.2	Aberration of light	98
7.3	Invariance of proper time	104
7.4	Two Lorentz coordinate transformations in sequence	106
7.5	Rapidity	108

Part IV Measurement

8	Body Properties and Lorentz Coordinate Transformations	117
8.1	Graphic representation of LT	117
8.2	Simultaneity and time dilation	119
9	Different Methods of Measuring Spatial Separation	121
9.1	Spatial separation measurement with the signal synchronized in the rest-frame of the observer S	122
9.2	Spatial separation measurement with the signal synchronized in the rest-frame of a body S_0	123
9.3	Spatial separation measurement due to illumination with light emitted in the rest-frame of the observer	125
9.4	Train in the tunnel: is the tunnel contracted?	128

10 The Bell Rockets	133
10.1 Rockets connected by a thread	133
10.2 The thread breaks	136
10.3 Lorentz-FitzGerald body contraction measured	136

Part V Time

11 The Light-Cone	143
11.1 The future	143
11.2 The past	146
12 Causality, Twins	149
12.1 Timelike and spacelike event separation	149
12.2 <i>Essay</i> : Quantum entanglement and causality	155
12.3 Time dilation revisited	160
12.4 Spaceship travel in the Milky Way	163
13 SR-Doppler Shift	171
13.1 Introducing SR-Doppler shift	171
13.2 Determination of SR-Doppler shift	175

Part VI Mass, Energy, Momentum

14 Mass and Energy	183
14.1 Proper body energy	183
14.2 Relativistic energy of a moving body	186
14.3 Mass of a body	187
15 Particle Momentum	191
15.1 Relation between energy and momentum	191
15.2 Particle rapidity	196
16 Generalized Mass-Energy Equivalence	203
16.1 Where is energy coming from?	203
16.2 Mass equivalence for kinetic energy in a gas	205
16.3 Potential energy mass equivalence	206
16.4 Atomic mass defect	208
16.5 Rotational energy mass equivalence	208
16.6 Chemical energy mass defect	210
16.7 Nuclear mass defect	211
16.8 Origin of energy	213

17 Tests of Special Relativity	215
17.1 Direct tests of special relativity	215
17.2 The Michelson-Morley experiment today	219
17.3 Tests of Lorentz coordinate transformation	220
17.4 Measurement of time	223

Part VII Collisions, Decays

18 A Preferred Frame of Reference	229
18.1 The center of momentum frame (CM-frame)	229
18.2 The LT to the CM-frame	231
18.3 Decay of a body in the CM-frame	234
18.4 Decay energy balance in CM-frame	237
18.5 Decay of a body in flight	237
19 Particle Reactions	243
19.1 Elastic two-body reactions	243
19.2 Compton scattering	245
19.3 Elastic bounce from a moving wall	249
19.4 Inelastic two-body reaction threshold	253
19.5 Energy available in a collision	257
19.6 Inelastic collision and particle production	262
19.7 Relativistic rocket equation	266

Part VIII 4-Vectors and 4-Force

20 4-Vectors in Minkowski Space	275
20.1 Lorentz invariants and covariant equations	275
20.2 The ‘position’ 4-vector	276
20.3 Metric in Minkowski space	277
20.4 Lorentz boosts as generalized rotation	280
20.5 Metric invariance	284
20.6 Finding new 4-vectors and invariants	286
21 4-Velocity and 4-Momentum	291
21.1 4-velocity u^μ	291
21.2 Energy-momentum 4-vector	295
21.3 Properties of Mandelstam variables	296

22 Acceleration and Relativistic Mechanics	303
22.1 Small acceleration	303
22.2 Definition of 4-acceleration	305
22.3 Relativistic form of Newton's 2nd Law	308
22.4 The 4-force and work-energy theorem	311

Part IX Motion of Charged Particles

23 The Lorentz Force	317
23.1 Motion in magnetic and electric fields	317
23.2 EM-potentials and homogeneous Maxwell equations	325
23.3 The Lorentz force: from fields to potentials	329
23.4 Lorentz force from variational principle	330
24 Electrons Riding a Plane Wave	343
24.1 Fields and potentials for a plane wave	343
24.2 Role of conservation laws	347
24.3 Surfing the plane wave	352

Part X Covariant Force and Field

25 Covariant Formulation of EM-Force	361
25.1 Lorentz force in terms of 4-potential	361
25.2 Covariant variation-principle	366
25.3 Covariant Hamiltonian for action principle	374
26 Covariant Fields and Invariants	377
26.1 EM-fields: relativistic form	377
26.2 LT of electromagnetic fields and field invariants	379
26.3 Constraints on field invariants	384
26.4 Covariant form of the Lorentz force in terms of fields	386
26.5 The Poynting force	390

Part XI Dynamics of Fields and Particles

27 Variational Principle for EM-Fields	399
27.1 Maxwell equations with sources	399
27.2 Covariant gauge condition	406
27.3 Homogeneous Maxwell equations	412
27.4 Energy, momentum and mass of the EM-field	418

28	EM-Field Inertia	423
28.1	Field energy-momentum dynamics	423
28.2	Mass of the electric field	427
28.3	Limiting field/force electromagnetism	432
29	Afterword: Acceleration	437
29.1	Can there be acceleration in SR?	437
29.2	Evidence for acceleration	438
29.3	Strong acceleration	441
29.4	EM radiation from an accelerated particle	446
29.5	EM radiation reaction force	449
29.6	Landau-Lifshitz radiation force model	452
29.7	Caldirola radiation reaction model	456
29.8	Unsolved radiation reaction	457
	Index	461
