1	Zero-Energy Living Lab	1
	Salvatore Carlucci, Francesco Causone, Lorenzo Pagliano and Marco Pietrobon	
1.1	Introduction	2
1.2	The Climate Challenges	5
1.3	The Building	8
1.4	Simulation and Optimization of the Design Concept	10
1.4.1	Mathematical Optimization	11
1.4.2	Dynamic Building Performance Simulation	14
1.4.3	Simulation Outcome and Discussion	15
1.5	Experimental Set-up	20
1.6	Earth to Air Heat Exchanger	21
1.6.1	Location of the Earth-to-Air Heat Exchanger and Identification of the Boundary Conditions	21
1.6.2	Design of the EAHE	22
1.6.3	Design of the Monitoring System of the Earth-to-Air Heat Exchanger	28
1.6.4	Installation of the Earth-to-Air Heat Exchanger	29
1.7	System Start-up and Early Outcomes	30
1.8	Conclusions	31
	References	32
2	Assessment of the Green Roofs Thermal Dynamic Behavior for Increasing the Building Energy Efficiencies	37
	Antonio Gagliano, Maurizio Detommaso and Francesco Nocera	
2.1	Introduction	39
2.2	Materials and Methods	40
2.3	Green Roof Modeling	43

2.4	Methodology.	44
2.4.1	Building Simulations.	44
2.5	Pilot Study	46
2.5.1	Reference Building	46
2.6	Building Retrofits Scenario.	48
2.6.1	Descriptions of the Green Roof.	48
2.7	Energy Performance Simulations	49
2.7.1	Building Simulations	49
2.7.2	Energy Needs	51
2.7.3	Assessment of the Thermal Dynamic Behaviour	52
2.7.4	Assessment of Thermal Comfort	54
2.8	Discussion	56
2.9	Conclusions	56
	References.	57
3	Understanding Opportunities and Barriers for Social Occupant Learning in Low Carbon Housing	61
	Magdalena Baborska-Narozny, Fionn Stevenson and Paul Chatterton	
3.1	Introduction	62
3.2	Home Use Social Learning Conceptual Framework	63
3.3	Methods	67
3.3.1	Quantitative Monitoring.	67
3.3.2	Qualitative Building and User Related Data	68
3.3.3	The Surveys	69
3.4	Understanding the Key Home Use Learning Challenges.	70
3.5	Analysing Home Use Expectations, Prior Experiences and Skills	71
3.6	Provision of Individual Home Use Learning Support	73
3.7	Decision-Making, Skills and Understanding Related to Home Use	75
3.8	Correlation of Results for MVHR in Relation to Clarity of Use.	76
3.9	Discussion of Barriers and Opportunities for Collective Learning	80
3.10	Conclusions	83
	References.	85
4	An Archetype Based Building Stock Aggregation Methodology Using a Remote Survey Technique	89
	James Pittam, Paul D. O'Sullivan and Garrett O'Sullivan	
4.1	Introduction and Background	90
4.2	Overview of Existing Studies Using Stock Modelling Methodologies	91
4.2.1	Various Modelling Techniques	93

4.3	Stock Modelling Method Used	95
4.3.1	Data Collection Methods	95
4.4	Methodology for Archetype Development	99
4.5	Application of Stock Aggregation Method	101
4.5.1	Results for Geometrical and Thermal Characteristics . .	105
4.6	Archetypes Development	107
4.7	Results from Case Study.	110
4.8	Discussion	113
4.9	Conclusion and Future Work	114
	References.	114
5	Renewable Homes—Feasibility Options for UK Traditional Buildings Through Green Deal.	117
	Charikleia Moschou and Catalina Spataru	
5.1	Introduction	117
5.2	Green Deal	118
5.2.1	Insulation.	121
5.2.2	Glazing	122
5.2.3	Ventilation.	124
5.2.4	Micro-distributed Technologies	125
5.3	Proposed Packages Through Green Deal	128
5.4	Results	130
5.4.1	Economic Analysis	131
5.4.2	Carbon Savings	133
5.4.3	Cost and CO ₂ Savings of Recommended Green Deal Packages	134
5.5	Discussions and Conclusions	136
	References.	137
6	Analysing the Contribution of Internal Heat Gains When Evaluating the Thermal Performance of Buildings.	139
	Rainer Elsland	
6.1	Background and Objectives	139
6.2	Methodological Approach.	140
6.2.1	Structural Framework	140
6.2.2	Modelling Procedure	142
6.2.3	Norm-Based Modelling of Useful Energy Demand for Space Heating Purposes.	144
6.2.4	Modelling Dynamic Internal Heat Gain Development	146
6.3	Case Study	147
6.3.1	Calibration Basis	147
6.3.2	Scenario Definition	148
6.3.3	Energy Policy Framework	149

6.3.4	Results.	150
6.4	Conclusions	154
	Appendix	154
	References.	157
