<b>List of Figures</b> .....	xi
<b>List of Tables</b> .....	xiii
<b>ANHA Series Preface</b> .....	xv
<b>Preface</b> .....	xix
<b>1 Introduction</b> .....	1
<b>2 Conventional SAR imaging</b> .....	19
2.1 Propagation and scattering of radar signals .....	21
2.1.1 The first Born approximation .....	22
2.2 Radiation pattern of the antenna .....	26
2.3 Inversion of the raw data .....	29
2.3.1 Matched filter .....	29
2.3.2 Synthetic aperture .....	30
2.3.3 Imaging kernel .....	32
2.4 The generalized ambiguity function .....	33
2.4.1 Factorized representation of the GAF .....	33
2.4.2 Azimuthal sum and pulse repetition frequency .....	34
2.4.3 The azimuthal factor .....	38
2.4.4 The range factor .....	40
2.4.5 Fourier interpretation of the data inversion .....	42
2.4.6 Doppler viewpoint for the azimuthal reconstruction .....	43
2.5 Factorization error of the GAF .....	44
2.6 Resolution .....	49
2.7 Deficiencies of the conventional approach .....	52
2.8 Chapter summary .....	54
Appendix 2.A Choosing the matched filter .....	54
<b>3 SAR imaging through the Earth's ionosphere</b> .....	59
3.1 Cold plasma .....	62
3.2 Propagation of radar pulses in a lossless homogeneous ionosphere .....	69
3.3 Propagation of radar pulses in an inhomogeneous ionosphere .....	78

3.4	Propagation of radar pulses in a lossy ionosphere .....	86
3.5	Inversion of the raw data .....	92
3.6	The generalized ambiguity function .....	99
3.7	Factorization error of the dispersive GAF .....	106
3.8	Resolution and other measures of performance .....	112
3.9	Horizontal variation of the ionosphere .....	117
3.9.1	Azimuthal variation of the ionosphere .....	117
3.9.2	Increase of the factorization error .....	121
3.9.3	Variation of the ionosphere in range .....	123
3.10	Evaluation of ionospheric parameters using dual carrier probing ...	124
3.10.1	A simple formula for the TEC.....	124
3.10.2	Using multiple reference objects to improve conditioning .....	126
3.10.3	Area-based image registration .....	128
3.10.3.1	Evaluating the shift between the two images ...	128
3.10.3.2	The role of image dilation .....	132
3.11	Matched filter with ionospheric corrections .....	134
3.11.1	Implementation of ionospheric corrections into the matched filter .....	134
3.11.2	The effect of registration errors .....	135
3.11.2.1	Range factor .....	135
3.11.2.2	Azimuthal factor .....	142
3.11.3	Factorization error for the corrected filter .....	144
3.12	Split bandwidth for dual carrier probing.....	149
3.13	Chapter summary .....	151
Appendix 3.A	Justification of linearization in Section 3.3 .....	153
Appendix 3.A.1	Shape of the ray .....	153
Appendix 3.A.2	Travel times.....	155
<b>4</b>	<b>The effect of ionospheric turbulence .....</b>	<b>163</b>
4.1	SAR imaging through a turbulent ionosphere .....	166
4.1.1	Filter correction in the deterministic case .....	166
4.1.2	Characterization of turbulence for use in SAR .....	168
4.1.3	Statistics of propagation through a turbulent medium .....	173
4.2	Stochastic GAF .....	179
4.2.1	Range-azimuth factorization .....	179
4.2.2	Assessing image quality in the stochastic framework .....	181
4.3	The effect of turbulence on imaging in azimuth .....	183
4.4	Error due to factorization and the effect of turbulence on imaging in range .....	188
4.5	Chapter summary .....	193
Appendix 4.A	Statistical properties of signal phases .....	194
Appendix 4.A.1	Correlation between signal phases .....	194
Appendix 4.A.2	Vertical profile of ionospheric turbulence .....	198
Appendix 4.A.3	Gaussian model for medium correlation .....	202
Appendix 4.A.4	Kolmogorov-Obukhov model for medium correlation .....	206
Appendix 4.B	The effect of ray shape in a turbulent ionosphere .....	211

<b>5</b>	<b>The effect of ionospheric anisotropy .....</b>	<b>217</b>
5.1	Electromagnetic waves in a cold magnetized plasma .....	220
5.2	Faraday rotation for a chirped signal .....	227
5.3	Ambiguity function in the presence of Faraday rotation.....	231
5.4	Factorization of the SAR ambiguity function in the presence of Faraday rotation .....	237
5.5	Detection of Faraday rotation .....	242
5.6	Evaluation of the Faraday rotation effect .....	245
5.7	Filter correction in the presence of Faraday rotation.....	252
5.7.1	Matched filtering for signals of variable amplitude .....	252
5.7.2	Weighted matched filter for compensation of Faraday rotation .....	254
5.7.3	Amplitude weighting without regularization .....	256
5.7.4	Amplitude weighting with regularization .....	261
5.8	Chapter summary .....	263
<b>6</b>	<b>The start-stop approximation .....</b>	<b>265</b>
6.1	The Lorentz transform and Doppler effect .....	266
6.2	Inversion of the raw data .....	278
6.3	The generalized ambiguity function .....	285
6.4	Factorization error of the GAF .....	290
6.5	Impact on SAR resolution .....	294
6.6	SAR performance with no filter correction .....	296
6.6.1	GAF with no filter correction .....	296
6.6.2	The range factor .....	299
6.6.3	The azimuthal factor .....	300
6.6.4	Factorization error .....	301
6.6.5	Image distortions for non-corrected filter .....	303
6.7	Chapter summary .....	305
	Appendix 6.A Radiation by a moving source.....	306
<b>7</b>	<b>Modeling radar targets beyond the first Born approximation .....</b>	<b>311</b>
7.1	A half-space model for radar targets.....	312
7.1.1	Incident field near the target .....	313
7.1.2	The method of perturbations and the separation of variables .....	315
7.1.3	Reflected field in the frequency domain .....	321
7.1.4	Reflected field in the time domain .....	329
7.2	SAR ambiguity theory for the new scattering model .....	332
7.3	Leontovich boundary condition .....	338
7.4	Rough surface scattering .....	342
7.5	Extension to the case of electromagnetic scattering .....	345
7.5.1	Governing equations .....	345
7.5.2	Zeroth order solution.....	348
7.5.2.1	Horizontal polarization.....	351
7.5.2.2	Vertical polarization.....	352
7.5.3	First order solution .....	352

7.5.3.1	Particular solution in the nonresonant case .....	357
7.5.3.2	Particular solution in the resonant case .....	358
7.5.4	Interface conditions .....	359
7.5.5	Scattering amplitudes in the nonresonant case .....	362
7.5.6	Scattering amplitudes in the resonant case.....	365
7.5.6.1	Horizontal polarization of the reflected field .....	365
7.5.6.2	Vertical polarization of the reflected field .....	366
7.5.7	First order scattered field in the physical domain .....	368
7.6	Chapter summary .....	369
<b>8</b>	<b>Inverse scattering off anisotropic targets .....</b>	<b>373</b>
8.1	Hierarchy of scattering models.....	377
8.2	General formulation .....	379
8.3	Perfect isotropic dielectric.....	384
8.3.1	Governing equations .....	384
8.3.2	Horizontal polarization .....	387
8.3.3	Vertical polarization.....	389
8.3.4	Discussion of the isotropic case .....	392
8.4	Perfect birefringent dielectric .....	392
8.4.1	Governing equations .....	392
8.4.2	Horizontal polarization of the incident wave .....	395
8.4.3	Vertical polarization of the incident wave .....	398
8.4.4	Scattering coefficients for a perfect birefringent dielectric.....	399
8.4.5	Scattering off the basal plane .....	400
8.4.6	Arbitrary direction of the optical axis.....	401
8.4.7	Discussion of the lossless birefringent medium .....	402
8.5	Isotropic and anisotropic lossy dielectric .....	403
8.5.1	Modified permittivity tensor in the presence of a finite conductivity .....	403
8.5.2	Isotropic permittivity and isotropic conductivity .....	404
8.5.3	Reflection off the basal plane: anisotropic lossy material ..	404
8.5.4	General anisotropic permittivity and conductivity .....	405
8.5.5	Discussion of lossy materials .....	406
8.6	Relation to polarimetric target decomposition .....	407
8.7	Chapter summary .....	409
Appendix 8.A	Proof of Proposition 8.1 .....	410
Appendix 8.B	Numerical study of the exact formulation .....	412
<b>9</b>	<b>Discussion and outstanding questions .....</b>	<b>417</b>
9.1	Other imaging scenarios.....	418
9.2	Scattering.....	418
9.2.1	Nonlinear scattering.....	418
9.2.2	Wide apertures and anisotropic scattering .....	419
9.2.3	Dispersion of the target .....	420

9.2.4	Physics-based models for targets .....	421
9.2.5	SAR polarimetry .....	422
9.3	Propagation .....	423
9.3.1	Isotropic propagation medium.....	424
9.3.2	Anisotropic propagation medium .....	425
9.3.3	Large perturbations .....	426
9.3.4	More comprehensive plasma models .....	426
9.3.5	Accelerated platform motion .....	427
9.4	Signal processing .....	428
9.4.1	Waveform and wavetrain design .....	428
9.4.2	Numerical aspects of signal processing .....	428
9.4.3	Processing in the presence of FR.....	429
9.4.4	Mitigation of turbulence induced distortions .....	429
9.4.5	Radiation pattern of the antenna.....	430
9.4.6	Noise.....	430
9.5	Chapter summary .....	431
<b>Bibliography .....</b>		<b>433</b>
<b>Index .....</b>		<b>443</b>

Transionospheric Synthetic Aperture Imaging

Gilman, M.; Smith, E.; Tsynkov, S.

2017, XXIII, 458 p. 25 illus., 16 illus. in color., Hardcover

ISBN: 978-3-319-52125-1
