

Contents

1	A Condensed History of Chromatin Research	1
1.1	The Early Research on the Nucleus and Chromatin	1
1.2	Chromatin Bares Information: The Chromosomes and Genes Era (1870–1945)	4
1.3	Chromatin as a Decision Center of the Cellular Factory: The Golden Age of Molecular Biology and Electron Microscopy (1944–1980)	7
1.4	Chromatin as a Highly Structured System: Genomic Data, Localisation Methods and Modelling (1980 Onwards)	11
1.5	The Substratum of Chromatin Memory: Epigenetic Regulation	15
1.6	Fine-Scale Chromatin Architecture: A New Modelling Area	18
1.7	Conclusion	19
	References	20
2	Investigating Chromatin Organisation Using Single Molecule Localisation Microscopy	25
2.1	Introduction	25
2.2	Single-Molecule Localization Microscopy: State-of-the-Art	27
2.2.1	Principle of SMLM	27
2.2.2	The Different SMLM Methods: A Historical Perspective	28
2.3	Application of SMLM to Image Chromatin	29
2.3.1	The Tao of SMLM	30
2.3.2	Importance of a Good Localization Precision in Order to Improve Resolution	30
2.3.3	Importance of High Signal Density to Improve Signal-to-Noise Ratio	31
2.3.4	Limitations of Previous Approaches to Study Chromatin Organisation	33

2.4	A Method to Reach High Labelling Density of Chromatin with SMLM	34
2.4.1	Theory of DNA Dye Fluorescence	36
2.4.2	Adapting Study of DNA Dyes Fluorescence to SMLM . . .	36
2.4.3	Optimization of the Photoconversion Process	37
2.4.4	Optimization of the Buffer Conditions	38
2.4.5	Multicolor Imaging with DNA	38
2.4.6	A Summary of Various Approaches Used to Study DNA with SMLM	38
2.5	SMLM Microscope Design and Imaging Pipeline	41
2.5.1	Sample Preparation for SMLM	42
2.5.2	Imaging Medium	42
2.6	Data Acquisition for SMLM	43
2.7	Data Reconstruction for SMLM	44
2.7.1	Spot Finding for SMLM	45
2.7.2	Drift Correction Algorithms for SMLM	47
2.7.3	Data Visualisation for SMLM	50
2.7.4	Data Analysis for SMLM	51
2.8	Some Further Considerations for Localisation Microscopy	53
2.8.1	Artefacts in Localisation Microscopy	53
2.8.2	Difference Between Localisation Precision and Accuracy	55
2.9	Summary	56
	References	57
3	Structure, Function and Dynamics of Chromatin	63
3.1	Introduction	63
3.2	The Hierarchical Organisation of Chromatin	65
3.2.1	Chromosome Territories (Scale: 1000–2000 nm)	66
3.2.2	Sub-chromosomal Domains (Scale: 500–1000 nm).	69
3.2.3	Chromatin Domains (Scale: 100–400 nm)	70
3.2.4	Chromatin Fibres (Scale: 30–100 nm)	74
3.2.5	A Cluster-on-a-String Model to Describe the Fibre/Domain Transition	77
3.2.6	Nucleosome Domains (Scale: 10–30 nm)	77
3.2.7	Inference of Further Intermediate Chromatin Structures Using Local Chromatin Density Maps	82
3.2.8	Hierarchical Organisation of Chromatin Structure	83
3.3	The Dynamics of Chromatin	84
3.3.1	Contrasting Arrangement of eu- and Hetero-Chromatin Inside the Cell Nucleus	84
3.3.2	Classifier Identifies Intermediate States Between eu- and Heterochromatin Regions in Differentiated Cells	85
3.3.3	Chromatin Dynamics During Differentiation of Mesenchymal Stem Cells	86

3.3.4	Dynamics of Chromatin upon Stress	87
3.3.5	Reversible Compaction of Chromatin Under Stress	89
3.3.6	Conclusion	92
3.4	The Function of Chromatin	94
3.4.1	Periphery of Chromatin Domains is Associated with High DNA Synthesis	94
3.4.2	Stress-Dependent Transcription at the Periphery of Chromatin Domains	96
3.4.3	Histone Modifications Allow to Further Dissect Chromatin into Active and Inactive Domains	96
3.4.4	SMLM Identifies Potential Sites of Transcription Machineries in the Mammalian Nucleus	99
3.5	Summary and Discussion	99
