

Contents

1	De Sitter Relativity: A Sixty-Year-Long Story	1
1.1	Introduction	1
1.2	Historical Origins	2
1.3	Later Developments	5
1.4	PSR as a “Dual” Theory	6
1.5	Experimental Verification	8
1.6	De Sitter Observers, Singularities and Wick Rotations	11
1.7	De Sitter Relativity in Current Research	15
1.8	De Sitter Space and Field Theory	17
	References	17
2	Steps Towards the De Sitter Relativity	21
2.1	Some Recalls About Lie Groups	21
2.2	Lie Groups of Spacetime	24
2.3	The Fantappiè “Erlangen Program”	25
2.4	The Arcidiacono Transformations	27
2.5	Some Consequences	29
	References	32
3	Projective Special Relativity	33
3.1	Preliminary Considerations	33
3.2	The Principle of Relativity	36
3.3	Hyperspheric Prespace	39
	Reference	40
4	Point, Fluid and Wave Mechanics	41
4.1	Introduction	41
4.2	PSR Metric	42
4.3	Kinematics of the Material Point	44
4.4	Dynamics of the Material Point	47
4.5	Dynamics of Perfect Incompressible Fluids	52

4.6	Digression on the Concept of Temperature in PSR	55
4.7	Dynamics of Perfect Incompressible Fluids with Heat Exchange	56
4.8	D'Alembert Equation	58
4.9	The Meaning of Physical Quantities in PSR	61
4.10	Concluding Notes.	63
	References	64
5	Cosmic Electromagnetism	67
5.1	Electromagnetic Equations in PSR	67
5.2	Relativistic Transformation of Electromagnetic Quantities (in the Framework of PSR)	71
	References	73
6	Projective General Relativity (PGR)	75
6.1	From PSR to PGR	75
6.2	Arcidiacono's Construction	77
6.3	Local Applications of PGR	80
6.4	Consistency Issues	81
6.5	The Cosmological Problem	83
6.6	Initial Singularity and Horizon	85
6.7	Archaic Universe	88
6.8	The Origin of Inertia	90
6.9	Dark Matter	91
6.10	The Dominance of Matter	94
	References	95
	Appendix A	97
	Appendix B: Interlude	101
	Index	105

De Sitter Projective Relativity

Licata, I.; Chiatti, L.; BENEDETTO, E.

2017, XVI, 108 p. 8 illus., Softcover

ISBN: 978-3-319-52270-8
