

Contents

1	Introduction	1
	References	4
2	Fundamentals: From Light to Command	7
2.1	Light, Eye and Vision	8
2.2	Image Formation	10
2.3	Field of Vision and Topographic Map	13
2.4	Visual Pathway	13
2.5	Brain Signals and Evoked Potentials	16
2.6	Influence of Refractive Error in VEP	19
2.7	Steady-State VEP	20
2.8	BCI Based on SSVEP	22
2.9	SSVEP-BCI and Gaze Dependence	25
	References	30
3	The Novel Stimulation Setup	33
3.1	SSVEP-BCI Stimulation Setup	33
3.2	Non-focused Objects and Depth-of-Field	36
3.3	Optical Point Spread Function (PSF)	38
3.4	Retinal Blurry Model	40
3.5	Accommodation of the Eye	43
	References	44
4	Frequency Demodulation for a SSVEP-BCI Based on Depth-of-Field	47
4.1	Traditional Demodulation	48
4.2	Proposed Demodulation	49
4.3	Spatio-Temporal Retinal Response for a Flickering Stimulus	52
4.4	Power Spectrum of the Retinal Response	55

4.5	Experimental Evaluation	60
4.6	Discussion	64
	References	65
5	Offline Evaluation of Command Detection	67
5.1	SSVEP Detection Methods	67
5.2	Experimental Procedure	70
5.3	Results	71
5.4	EOG Measurements	76
5.5	Discussion	77
	References	78
6	Online Applications in Communication and Control	79
6.1	Binary Selection.	79
6.2	BCI for Communication—A Spelling System	80
6.3	BCI for Control—Control of a Telepresence Robot.	84
	References	89
7	Future Directions in Patients with Paralysis.	91
	References	92
	Index	95

Toward Brain-Computer Interaction in Paralysis
A New Approach Based on Visual Evoked Potentials and
Depth-of-Field

Cotrina, A.

2017, XVI, 96 p. 61 illus., 13 illus. in color., Softcover

ISBN: 978-3-319-52297-5
