

Contents

- 1 Introduction 1**
 - 1.1 Objectives of the Book 3
 - 1.1.1 Objective #1. Formulate a Mathematical Model for the Smart-Grid Resource-Allocation Problem 3
 - 1.1.2 Objective #2. Design, Develop, and Implement a Distributed Solution Procedure for the Mathematical Model 4
 - 1.1.3 Objective #3. Develop an Experimental Design for Testing the Procedure Referenced in Objective 2 4
 - 1.1.4 Objective #4. Conduct the Experimental Testing Referenced in Objective 3 5
 - 1.1.5 Objective # 5. Develop Decision Models Using Linear Classifier, and Placement of Synchro phasors Using LP 5
 - 1.1.6 Objective # 6. Integrating Wind Source to Smart Grid Decision Using Linear Programming, and Modeling Capacitated Resources 5
- 2 Literature Review 7**
 - 2.1 Linear Programming in Practice 7
 - 2.2 Development of a Distributed Linear-Programming Model 10
- 3 Energy Reallocation in a Smart Grid 13**
 - 3.1 Introduction 13
 - 3.2 Problem Statement 15
 - 3.3 Physical Infrastructure Issues 15
 - 3.3.1 Distributed-Device Control Functions 15
 - 3.3.2 Selective Load Control 15
 - 3.4 Micro-Grid Islanding 16

3.5	Distributed Pathway Control	16
3.6	Smart-Grid Modeling	16
3.7	Integer Linear-Programming Models	17
3.8	Notation	18
3.9	Uncertainty in Resource Allocation	20
3.10	Smart-Grid Simulation	23
3.11	Conclusions	24
4	Resource Allocation Using Branch and Bound	25
4.1	Distributed Energy Resources in a Smart Grid	26
4.2	Related Work	26
4.3	Assigning DER to RUA Formulation	27
4.4	DER Capacities	29
4.5	RUA Preferences	30
4.5.1	Case 1	31
4.6	Constraints	32
4.7	Branch-and-Bound (BB) Strategy	35
4.8	Results	36
4.8.1	Case 1	37
4.8.2	Case 2	37
4.9	Conclusions	38
5	Resource Allocation Using DW Decomposition	39
5.1	Why Decompose?	39
5.2	Objective Function and Illustration of the DW Algorithm	40
5.3	LP Formulation of the IEEE 14-BUS System	45
5.3.1	Region 1 Constraints	50
5.3.2	Region 3 Constraints (Nodes 6, 12, and 13)	54
5.3.3	Region 2 Constraints	57
5.3.4	Master Constraints (Linking Constraints)	62
5.4	Decomposing the IEEE 14-Bus System into Two Regions	63
5.4.1	R2 Node Constraint in Region 1	63
5.4.2	R1 Node Constraint in Region 1	63
5.5	Formulating the IEEE 30-Bus System's Constraints	64
5.5.1	Nodal Constraints for Region 1	64
5.5.2	Nodal Constraints for Region 2	73
5.5.3	Nodal Constraints for Region 3	76
6	Implementation and Testing of the Dantzig-Wolfe Procedure	79
6.1	Overview of Modeling in AMPL and the Results	79
6.2	Lagrangian Relaxation Procedure	80
6.3	Computational Results of IEEE Bus System	82

7	Remarks About the Dantzig-Wolfe Scheme	91
8	A Linear Classifier for Decision Support in a Smart Grid	95
8.1	Introduction	95
8.2	Background on a Data Source from a GV	97
8.3	Objectives	98
8.4	Classifying and Predicting the Missing Values Using Decision-Tree Models	98
8.5	Model Decision Trees	99
8.5.1	M5 Model Trees	99
8.5.2	Related Work on Building Decision-Tree Models	100
8.5.3	WEKA Platform	101
8.5.4	Data Pre-Processing in Weka	101
8.5.5	Pruning and Smoothing the Model Trees	103
8.6	J48 Classifier in Weka	104
8.6.1	Situational Awareness (SA)	104
8.7	Results and Discussion	107
8.8	Conclusion	108
9	Maximization of the Utility Function, Time-Dependent Energy Allocation, and Fuzzy-Logic Resource-Allocation Models	109
9.1	Introduction	109
9.2	Background	110
9.2.1	Large-Scale Resource Optimization	112
9.3	Related Research	113
9.3.1	Collection of Generalized LP Models	114
9.3.2	Section 1	115
9.3.3	Belief MDP	120
9.4	Conclusion	124
10	Placement of Synchrophasors Using Linear Programming and Zero-Injection Constraints	125
10.1	Introduction	125
10.2	Placement Problem Formulation	126
10.2.1	System With No Conventional Measurements and Zero/Flow Injections	127
10.2.2	System With Zero-Injection Measurements	129
10.2.3	System Observability Redundancy Index (SORI)	130
10.2.4	Optimal Redundancy Criterion (ORC)	131
10.3	IEEE Bus Test Cases and Simulation Results	132
10.4	Conclusion	135

11	Unbiased Optimal Power Flow (OPF) for Power Systems with Wind-Power Generation	137
11.1	Introduction	137
11.2	Motivation	137
11.3	OPF with Wind Generation	138
11.4	Cost Function for Unscheduled Wind	139
11.5	Case Studies and Results	140
11.6	Further Discussion	142
11.7	Conclusion	143
12	Smart-Grid Optimization Using A Capacitated Transshipment Problem Solver	145
12.1	Introduction	145
12.2	Smart Grid	146
12.2.1	Self-Healing System	146
12.3	Linear Programming	147
12.3.1	Simplex Method	148
12.3.2	Network-Flow Problems	148
12.4	Capacitated Transshipment Problem	149
12.4.1	Transportation Problem	149
12.4.2	Transshipment Nodes	150
12.4.3	Arc Capacities	150
12.4.4	CTP Standard Form	150
12.4.5	CTP and the Smart Grid	151
12.5	Implementation	151
12.5.1	Design Goals	152
12.5.2	Implementation Overview	154
12.5.3	Smart-Grid Possibilities	155
12.5.4	Data Structures	155
12.5.5	Modified Simplex Algorithm	160
12.5.6	Output	169
12.5.7	Limitations and Modifications	171
12.5.8	Network Generator	172
12.6	Software Comparisons	173
12.6.1	AMPL	173
12.6.2	SAS	173
12.6.3	CTP Solver	174
12.6.4	Displayed Results' Comparison	174
12.6.5	Accuracy Summary	175
12.6.6	Performance Summary	175
12.6.7	Testing Environment and Setup	177
12.6.8	Test Network Results	177
12.7	Results and Conclusion	178

13	Decomposition of Microgrids in Large-Scale Electric Test Beds for Economic Dispatch Optimization	181
13.1	Introduction	181
13.2	Background on Smart Grid Modeling Using Graph Theory	182
13.2.1	Graph Theory and Network Community	182
13.2.2	Graph Clustering and Application to Grid Decomposition	184
13.2.3	Software Utilization	189
13.3	Implementation and Modeling	189
13.3.1	Procedure	189
13.4	Numerical Simulations	191
13.5	Results	194
13.6	Discussion	195
13.7	Conclusion	200
	References	201
	Index	209

Distributed Linear Programming Models in a Smart Grid

Ranganathan, P.; Nygard, K.E.

2017, XXV, 213 p. 67 illus., 54 illus. in color., Hardcover

ISBN: 978-3-319-52616-4
