1	Systems Theory and Stability Concepts	1
1.1	Outline	1
1.2	Characteristics of the Dynamics of Nonlinear Systems	1
1.3	Computation of Isoclines	2
1.4	Stability Features of Dynamical Systems	4
1.4.1	The Phase Diagram	4
1.4.2	Stability Analysis of Nonlinear Systems	5
1.4.3	Local Stability Properties of a Nonlinear Model	8
1.5	Phase Diagrams and Equilibria	9
1.5.1	Phase Diagrams for Linear Dynamical Systems	9
1.5.2	Multiple Equilibria for Nonlinear Dynamical Systems	10
1.5.3	Limit Cycles	15
1.6	Bifurcations	17
1.6.1	Bifurcations of Fixed Points	17
1.6.2	Saddle-Node Bifurcations of Fixed Points in a One-Dimensional System	18
1.6.3	Pitchfork Bifurcation of Fixed Points	19
1.6.4	The Hopf Bifurcation	19
1.7	Chaos in Dynamical Systems	23
1.7.1	Chaotic Dynamics	23
1.7.2	Examples of Chaotic Dynamical Systems	23
2	Main Approaches to Nonlinear Control	27
2.1	Outline	27
2.2	Overview of Main Approaches to Nonlinear Control	27
2.3	Control Based on Global Linearization Methods	28
2.3.1	Overview of Differential Flatness Theory	28
2.3.2	Differential Flatness for Finite Dimensional Systems	29

2.4	Control Based on Approximate Linearization Methods.	32
2.4.1	Approximate Linearization Round Temporary Equilibria.	32
2.4.2	The Nonlinear H-Infinity Control	33
2.4.3	Approximate Linearization with Local Fuzzy Models	38
2.5	Control Based on Lyapunov Stability Analysis.	40
2.5.1	Transformation of Nonlinear Systems into a Canonical Form.	40
2.5.2	Adaptive Control Law for Nonlinear Systems	41
2.5.3	Approximators of System Unknown Dynamics	42
2.5.4	Lyapunov Stability Analysis for Dynamical Systems	43
3	Main Approaches to Nonlinear Estimation	47
3.1	Outline	47
3.2	Linear State Observers	48
3.3	The Continuous-Time Kalman Filter for Linear Models.	49
3.4	The Discrete-Time Kalman Filter for Linear Systems.	49
3.5	The Extended Kalman Filter for Nonlinear Systems.	51
3.6	Sigma-Point Kalman Filters	53
3.7	Particle Filters.	56
3.7.1	The Particle Approximation of Probability Distributions	56
3.7.2	The Prediction Stage	57
3.7.3	The Correction Stage.	58
3.7.4	The Resampling Stage.	58
3.7.5	Approaches to the Implementation of Resampling.	60
3.8	The Derivative-Free Nonlinear Kalman Filter.	61
3.8.1	Conditions for solving the estimation problem in single-input nonlinear systems.	61
3.8.2	State Estimation with the Derivative-Free Nonlinear Kalman Filter	64
3.8.3	Derivative-Free Kalman Filtering for multivariable Nonlinear Systems.	65
3.9	Distributed Extended Kalman Filtering.	66
3.9.1	Calculation of Local Extended Kalman Filter Estimations	66
3.9.2	Extended Information Filtering for State Estimates Fusion	69
3.10	Distributed Sigma-Point Kalman Filtering	70
3.10.1	Calculation of Local Unscented Kalman Filter Estimations	70
3.10.2	Unscented Information Filtering for State Estimates Fusion	74

3.11	Distributed Particle Filter	76
3.11.1	Distributed Particle Filtering for State Estimation Fusion	76
3.11.2	Fusion of the Local Probability Density Functions	78
3.12	The Derivative-Free Distributed Nonlinear Kalman Filter.	79
3.12.1	Overview.	79
3.12.2	Fusing Estimations from Local Distributed Filters.	81
3.12.3	Calculation of the Aggregate State Estimation.	83
3.12.4	Derivative-Free Extended Information Filtering.	84
4	Linearizing Control and Estimation for Nonlinear Dynamics in Financial Systems	85
4.1	Outline	85
4.2	Dynamic Model of the Chaotic Finance System.	86
4.2.1	State-Space Model of the Chaotic Financial System.	87
4.2.2	Chaotic Dynamics of the Finance System	88
4.3	Overview of Differential Flatness Theory	89
4.3.1	Conditions for Applying the Differential Flatness Theory.	89
4.3.2	Transformation of Nonlinear Systems into Canonical Forms	90
4.4	Flatness-Based Control of the Chaotic Finance Dynamics	91
4.4.1	Differential Flatness of the Chaotic Finance System . . .	91
4.4.2	Design of a Stabilizing Feedback Controller	92
4.5	Adaptive Fuzzy Control of the Chaotic Finance System Using Output Feedback.	93
4.5.1	Problem Statement.	93
4.5.2	Transformation of Tracking into a Regulation Problem.	93
4.5.3	Estimation of the State Vector.	95
4.5.4	The Additional Control Term u_c	96
4.5.5	Dynamics of the Observation Error.	96
4.5.6	Approximation of Unknown Nonlinear Dynamics.	96
4.6	Lyapunov Stability Analysis.	98
4.6.1	Design of the Lyapunov Function	98
4.6.2	The Role of Riccati Equation Coefficients in H_∞ Control Robustness.	103
4.7	Simulation Tests.	104
5	Nonlinear Optimal Control and Filtering for Financial Systems.	109
5.1	Outline	109
5.2	Chaotic Dynamics in a Macroeconomics Model.	110

5.2.1	Dynamic Model of the Chaotic Finance System	110
5.2.2	State-Space Model of the Chaotic Financial System . . .	111
5.2.3	Chaotic Dynamics of the Finance System	112
5.3	Design of an H-Infinity Nonlinear Feedback Controller	113
5.3.1	Approximate Linearization of the Chaotic Finance System.	113
5.3.2	Equivalent Linearized Dynamics of the Chaotic Finance System	114
5.3.3	The Nonlinear H-Infinity Control	115
5.3.4	Computation of the Feedback Control Gains	116
5.3.5	The Role of Riccati Equation Coefficients in H_∞ Control Robustness	117
5.4	Lyapunov Stability Analysis	118
5.4.1	Stability Proof	118
5.4.2	Robust State Estimation with the Use of the H_∞ Kalman Filter	120
5.5	Simulation Tests	121
6	Kalman Filtering Approach for Detection of Option Mispricing in the Black–Scholes PDE	125
6.1	Outline	125
6.2	Option Pricing Modeling with the Use of the Black–Scholes PDE	126
6.2.1	Option Pricing Modeling with the Use of Stochastic Differential Equations	126
6.2.2	The Black–Scholes PDE	127
6.2.3	Solution of the Black–Scholes PDE	127
6.2.4	Sensitivities of the European Call Option	128
6.2.5	Nonlinearities in the Black–Scholes PDE	128
6.2.6	Derivative Pricing	129
6.3	Estimation of Nonlinear Diffusion Dynamics	130
6.3.1	Filtering in Distributed Parameter Systems	130
6.4	State Estimation for the Black–Scholes PDE	132
6.4.1	Modeling in Canonical Form of the Nonlinear Black–Scholes Equation	132
6.4.2	State Estimation with the Derivative-Free Nonlinear Kalman Filter	135
6.4.3	Consistency Checking of the Option Pricing Model	136
6.5	Simulation Tests	137
6.5.1	Estimation with the Use of an Accurate Black–Scholes Model	137
6.5.2	Detection of Mispricing in the Black–Scholes Model	137

7	Kalman Filtering Approach to the Detection of Option Mispricing in Elaborated PDE Finance Models	141
7.1	Outline	141
7.2	Option Pricing in the Energy Market	142
7.2.1	Energy Market and Swing Options	142
7.2.2	Energy Options Pricing Models	143
7.3	Validation of the Energy Options Pricing Model	145
7.3.1	State Estimation with the Derivative-Free Nonlinear Kalman Filter	145
7.3.2	Consistency Checking of the Option Pricing Model	149
7.4	Simulation Tests	150
7.4.1	Estimation with the Use of an Accurate Energy Pricing Model	150
7.4.2	Detection of Mispricing in the Energy Pricing Model	151
8	Corporations' Default Probability Forecasting Using the Derivative-Free Nonlinear Kalman Filter	153
8.1	Outline	153
8.2	Company's Credit Risk Models	154
8.2.1	The Merton-KMV Credit-Risk Model	154
8.2.2	Computation of a Company's Distance to Default	156
8.3	Estimation of the Market Value of the Company Using the Black–Scholes PDE	156
8.3.1	State-Space Description of the Black–Scholes Equation	156
8.4	Forecasting Default with the Derivative-Free Nonlinear Kalman Filter	158
8.4.1	State Estimation with the Derivative-Free Nonlinear Kalman Filter	158
8.4.2	The Derivative-Free Nonlinear Kalman Filter as Extrapolator	159
8.4.3	Forecasting of the Market Value Using the Derivative-Free Nonlinear Kalman Filter	160
8.4.4	Assessment of the Accuracy of Forecasting with the Use of Statistical Criteria	160
8.5	Simulation Tests	162
9	Validation of Financial Options Models Using Neural Networks with Invariance to Fourier Transform	167
9.1	Outline	167
9.2	Option Pricing in the Energy Market	168
9.3	Neural Networks Using Hermite Activation Functions	170

9.3.1	Generalized Fourier Series.	170
9.3.2	The Gauss–Hermite Series Expansion	172
9.3.3	Neural Networks Using 2D Hermite Activation Functions.	175
9.4	Signals Power Spectrum and the Fourier Transform.	177
9.4.1	Parseval's Theorem	177
9.4.2	Power Spectrum of the Signal Using the Gauss–Hermite Expansion.	178
9.5	Simulation Tests	179
10	Statistical Validation of Financial Forecasting Tools with Generalized Likelihood Ratio Approaches	183
10.1	Outline	183
10.2	Neuro-Fuzzy Modelling	184
10.2.1	Problem Statement.	184
10.2.2	Determination of the Number and Type of Fuzzy Rules	185
10.2.3	Stages of Fuzzy Modelling	187
10.2.4	Fuzzy Model Validation for the Avoidance of Overtraining	189
10.3	Fuzzy Model Validation with the Local Statistical Approach	191
10.3.1	The Exact Model.	191
10.3.2	The Change Detection Test.	192
10.3.3	Isolation of Parametric Changes with the Sensitivity Test.	194
10.3.4	Isolation of Parametric Changes with the Min-Max Test.	195
10.3.5	Model Validation Reduces the Need for Model Retraining	197
10.4	Detectability of Changes in Fuzzy Models	197
10.5	Simulation Results	201
10.5.1	Fuzzy Rule Base in Input Space Partitioning.	202
10.5.2	Fuzzy Modelling with the Input Dimension Partition.	207
11	Distributed Validation of Option Price Forecasting Tools Using a Statistical Fault Diagnosis Approach	211
11.1	Overview	211
11.2	State Estimation for the Black–Scholes PDE	213
11.2.1	State-Space Description of the Black–Scholes PDE.	213
11.2.2	State Estimation with Kalman Filtering	215
11.3	Distributed Forecasting Model	216

11.4	Consistency of the Kalman Filter	219
11.5	Equivalence Between Kalman Filters and Regressor Models	221
11.6	Change Detection of the Fuzzy Kalman Filter Using the Local Statistical Approach	223
11.6.1	The Global χ^2 Test for Change Detection	223
11.6.2	Isolation of Inconsistent Kalman Filter Parameters with the Sensitivity Test	227
11.6.3	Isolation of Inconsistent Kalman Filter Parameters with the Min–Max Test.	227
11.7	Simulation Tests	229
11.7.1	Distributed State Estimation of the Black–Scholes PDE.	229
11.7.2	Simulation Results.	230
12	Stabilization of Financial Systems Dynamics Through Feedback Control of the Black-Scholes PDE	235
12.1	Outline	235
12.2	Transformation of the Black-Scholes PDE into Nonlinear ODEs	236
12.2.1	Decomposition of the PDE Model into Equivalent ODEs	236
12.2.2	Modeling in State-Space Form of the Black-Scholes PDE.	239
12.3	Differential Flatness of the Black-Scholes PDE Model	240
12.4	Computation of a Boundary Conditions-Based Feedback Control Law	242
12.5	Closed Loop Dynamics.	244
12.6	Simulation Tests	246
13	Stabilization of the Multi-asset Black–Scholes PDE Using Differential Flatness Theory	253
13.1	Outline	253
13.2	Boundary Control of the Multi-asset Black–Scholes PDE	254
13.3	Flatness-Based Control of the Multi-asset Black–Scholes PDE	257
13.4	Stability Analysis of the Control Loop	259
13.5	Simulation Tests	261
14	Stabilization of Commodities Pricing PDE Using Differential Flatness Theory	265
14.1	Outline	265
14.2	Models for Commodities Pricing	266
14.2.1	Elaborated Schemes for Trading Electric Power	266

14.2.2	Commodities Pricing with the Single-Factor PDE Model	267
14.2.3	Commodities Pricing with the Two-Factor PDE Model	268
14.2.4	Commodities Pricing with the Three-Factor PDE Model	270
14.3	Boundary Control of the Multi-factor Commodities Price PDE	270
14.4	Flatness-Based Control of the Multi-factor Commodities Price PDE	273
14.5	Stability Analysis of the Control Loop of the Multi-factor Commodities Price PDE	275
14.6	Simulation Tests	278
15	Stabilization of Mortgage Price Dynamics Using Differential Flatness Theory	281
15.1	Outline	281
15.2	Options Theory-Based PDE Model of Mortgage Valuation	282
15.3	Computation of the Mortgage Price PDE	283
15.4	Boundary Control of the Multi-factor Mortgage Price PDE	285
15.5	Flatness-Based Control of the Multi-factor Mortgage Price PDE	288
15.6	Stability Analysis of the Control Loop of the Multi-factor Mortgage Price PDE	290
15.7	Simulation Tests	292
