1	Introduction	1
1.1	State of the Art	2
1.2	Motivation and Problem Statement	4
1.3	Author's Contributions	5
1.4	Thesis Outline	6
	References	8
2	Preliminaries	11
2.1	Mathematical Basis	11
2.2	Fractional-Order Models	13
2.2.1	Process Models	14
2.2.2	Stability Analysis	14
2.2.3	Time Domain Analysis	15
2.2.4	Frequency Domain Analysis	16
2.3	Approximation of Fractional-Order Operators	17
2.4	Fractional-Order Controllers	17
2.5	Optimization Methods	20
2.5.1	Newton-Raphson Method	20
2.5.2	Nonlinear Least-Squares Estimation Methods	20
2.5.3	Nelder-Mead Method	21
2.5.4	Optimization Problems with Bounds and Constraints	23
	References	25
3	Identification of Fractional-Order Models	27
3.1	System Identification Fundamentals	27
3.2	Open-Loop Identification in the Time Domain	29
3.2.1	Parametric Identification	31
3.2.2	Residual Analysis	32
3.3	Closed-Loop Identification in the Time Domain	36
3.4	Frequency Domain Identification in Automatic Tuning Applications for Process Control	37

3.5	Conclusions	44
	References	45
4	Fractional-Order PID Controller Design.	47
4.1	Optimization Based Controller Design	47
4.2	Gain and Order Scheduling	52
4.3	Stabilization of Unstable Plants	54
4.4	Retuning FOPID Control for Existing PID Control Loops.	56
4.5	Control Loop Analysis and Controller Design in the Frequency Domain for Automatic Tuning Applications in Process Control	60
4.5.1	Computation of Control System Characteristics	60
4.5.2	FOPID Controller Design	67
4.6	Conclusions	73
	References	74
5	Implementation of Fractional-Order Models and Controllers	77
5.1	An Update to Carlson's Approximation Method for Analog Implementations	77
5.2	Efficient Analog Implementation of Fractional-Order Models and Controllers.	85
5.2.1	Approximation Methods	85
5.2.2	Unified Approach to Fractance Network Generation.	88
5.3	Digital Implementation of Fractional-Order Controllers	90
5.3.1	Discrete-Time Oustaloup Filter Approximation for Embedded Applications	90
5.3.2	FOPID Controller Implementation	93
5.3.3	FO Lead-Lag Compensator Implementation	94
5.3.4	Controller Reset Logic	95
5.4	Experimental Platform for Real-Time Closed-Loop Simulations of Control Systems	95
5.5	Development of a Hardware FOPID Controller Prototype	97
5.5.1	Atmel AVR Microcontroller Family Based Implementation.	97
5.5.2	STMicroelectronics STM32F407 Microcontroller Family Based Implementation.	101
5.6	Conclusions	103
	References	104
6	FOMCON: Fractional-Order Modeling and Control Toolbox.	107
6.1	Overview of the Toolbox	107
6.2	Identification Module	110
6.3	Control Module	116
6.4	Implementation Module	119

6.5	Conclusions	126
	References	128
7	Applications of Fractional-Order Control	131
7.1	Fluid Level Control in a Multi Tank System	131
7.1.1	Coupled Tanks System	132
7.1.2	Multi-tank System	138
7.2	Retuning Control of a Magnetic Levitation System	143
7.2.1	Identification of the Nonlinear Model of the MLS	146
7.2.2	FOPID Controller Design for the MLS	148
7.2.3	Experimental Results	149
7.3	Control of Ion-Polymer Metal Composite Actuator	151
7.3.1	Identification of the Actuator Model	153
7.3.2	FOPID Control	154
7.3.3	FOINVM Based Control	156
7.3.4	Hardware Implementation of the Controller	156
7.4	Conclusions	163
7.4.1	Multi Tank System	163
7.4.2	Magnetic Levitation System	164
7.4.3	IPMC Actuator	164
	References	166
8	Conclusions	169
	References	173

Fractional-order Modeling and Control of Dynamic
Systems

Tepljakov, A.

2017, XIX, 173 p. 79 illus., 52 illus. in color., Hardcover

ISBN: 978-3-319-52949-3
