1	Introduction	1
1.1	Control of Systems	1
1.2	Optimization Classes	3
	References	7
 Part I Introductory Elements		
2	Functions Optimization	11
2.1	Weierstrass Theorem	11
2.2	Conditions of Extreme	12
2.2.1	Real Functions of One Variable	12
2.2.2	Functions of Several Variables	13
2.3	Constrained Optimization	18
2.3.1	Functions of Two Variables	18
2.3.2	Functions with Arbitrary Finite Number of Variables	20
	Reference	22
3	Elements of Variational Calculus	23
3.1	Short History	23
3.2	Preliminary Issues	24
3.2.1	Necessary Conditions for Extremization of Functionals	24
3.2.2	Dual Methods in Variational Calculus	26
3.3	Euler Extremization Procedure	29
3.4	The Basic Lemma	31
3.4.1	The Statement and Proof of the Fundamental Lemma	34

3.5	The Euler-Lagrange Equation for Other Cases of Practical Interest	35
3.5.1	Integrands Depending on Several Functions	35
3.5.2	Integrands Containing Higher Order Derivatives.	38
3.5.3	Integrands Depending on Several Independent Variables.	40
3.6	Analytical Solutions of Euler-Lagrange Equations	41
3.6.1	The Case When $F = F(x, u')$	41
3.6.2	The Case When $F = F(u, u')$	43
3.6.3	The Case When $F(x, y, y')$ Is Total Derivative	45
3.7	Boundary Conditions	46
3.7.1	Natural Boundary Conditions	46
3.7.2	Transversality Conditions	47
3.8	Extremals and Isoextreme Curves	49
3.8.1	Another Interpretation of the Transversality Condition	49
3.8.2	The Regularity Assumption.	51
3.8.3	Obtaining Extremals from Isoextreme and Vice Versa	52
3.8.4	Example	52
3.8.5	Corner Conditions (Erdmann-Weierstrass)	56
3.9	Variational Notation.	57
3.10	Constrained Extremization	60
3.11	Isoperimetric Problems.	64
3.11.1	Extreme with More Constraints.	71
3.11.2	The Case of Multiple Dependent Variables.	72
	References	73

Part II Theory

4	Generalities Concerning the Optimal Control Problems	77
4.1	Variational Problems with Differential Equations as Constraints.	77
4.1.1	Generalization of Some Notions of Variational Calculus	77
4.1.2	Differential Equations Acting as Constraints. Consequences	79
4.1.3	Problems of Type Lagrange, Mayer and Bolza.	82
4.2	Solving Optimal Control Problems.	83
4.2.1	Constraints on the Solutions	84
4.2.2	The Principle of Optimality for Parts of the Optimal Trajectory	85
4.2.3	Direct and Indirect Methods	86
	References	88

5	The Maximum Principle (Pontryagin)	89
5.1	Preliminaries	89
5.2	The Fundamental Theorem	91
5.3	Comments on the Fundamental Theorem	95
5.3.1	Strategies of Using the Necessary Conditions	95
5.3.2	The Case of Non-autonomous Systems	96
5.3.3	Functionals Depending on Parameters	97
5.4	Other Useful Theorems	98
5.4.1	Non-autonomous Systems: Processes with Unspecified Duration	98
5.4.2	Non-autonomous Systems: Optimal Rapid Reaction	100
5.4.3	Processes with Specified Duration	101
5.5	Linear Rapid Reaction Systems	102
5.6	The Synthesis Problem	105
5.7	Example	106
	References	109
6	The Gradient Method	111
6.1	Common Extreme Problems	111
6.1.1	Unconstrained Optimization	111
6.1.2	Constrained Optimization	116
6.2	Simple Variational Problems	117
6.3	Optimal Control Problems	119
6.3.1	The Fundamental Equation	120
6.3.2	Process with Specified Duration but Without Final Conditions	124
6.3.3	Process with Specified Duration and One Final Condition	126
6.3.4	Process with Unspecified Duration and Without Final Conditions	127
6.4	Constraints for the Control Functions and State Variables	128
6.4.1	Constraints for the Control Functions	128
6.4.2	Constraints for the State Variables	130
6.5	General Approach	131
	References	136
7	Dynamic Programming (Bellman Method)	137
7.1	Common Optimization Problems	137
7.1.1	The Grid Method	137
7.1.2	The Bellman Method	137
7.1.3	Example	140
7.2	Problems of Variational Calculus	143

7.3	Optimal Control Problems	146
7.3.1	Extension of the Variational Calculus Method	146
7.3.2	Bellman Equation	148
7.3.3	Example	152
7.4	Linear Processes and Quadratic Objective Functions	153
7.5	Comments	157
	References	157

Part III Applications: Heat Transfer and Storage

8	Heat Transfer Processes	161
8.1	Optimal Strategies for Common Heat Transfer Processes.	161
8.1.1	Determination of Optimal Strategies	161
8.1.2	The Case When the Value of n Is Arbitrary	163
8.1.3	The Case When $n = 1$	164
8.1.4	The Case When $n = -1$	166
8.1.5	The Case When $n = 4$	167
8.1.6	The Case of Entropy Generation at Constant Speed	168
8.2	Optimal Paths for Minimizing Lost Available Work	168
8.2.1	Introduction.	168
8.2.2	Theory	169
8.2.3	Results	175
8.2.4	Conclusions	183
	Appendix 8A	184
	Appendix 8B	186
	References	187
9	Heat Exchangers	189
9.1	Simple Approach	189
9.1.1	Usual and Optimized Operation Strategies	190
9.2	Optimal Strategies for Steady State Heat Exchanger Operation	192
9.2.1	Introduction.	192
9.2.2	Optimal Heating/Cooling Strategies	193
9.2.3	Optimization of Heat Exchanger Operation Based on Minimum Entropy Generation	195
9.2.4	Optimization of Steady-State Heat Exchanger Operation for Arbitrary Criteria	198
9.3	Conclusions	202
	References	203

10	Storage of Thermal Energy and Exergy	205
10.1	Unsteady Operation of Storage Elements	205
10.2	The Exergy Loss During the Storage Process	207
10.3	Thermal Energy Storage in Stratified and Fully Mixed Water Tanks	209
10.3.1	Introduction	209
10.3.2	Stratified Liquid Storage Tanks	210
10.3.3	Fully Mixed Liquid Storage Tanks	221
10.3.4	Conclusions	224
	Appendix 10A	226
	Appendix 10B	227
	References	228
11	Heating and Cooling Processes	231
11.1	Optimization of Heating and Cooling Processes by Variational Calculus	231
11.1.1	Cooling Process Without Time Limitation	231
11.1.2	Cooling Process in Limited Time	233
11.2	Optimal Control of Forced Cool-Down Processes	235
11.2.1	Introduction	235
11.2.2	Forced Cooling Processes with Minimization of Cooling Fluid Mass	235
11.2.3	Forced Cooling Processes with Minimization of Dissipation Measures	239
11.3	Conclusion	245
	References	245
12	Optimization of Thermal Insulation of Seasonal Water Storage Tanks	247
12.1	Optimization of the Distribution of Thermal Insulation	247
12.2	Optimization of the Total Volume of Thermal Insulation	253
	Reference	255
13	Optimization of Pin Fin Profiles	257
13.1	Optimal Control Methods	258
13.1.1	Methodology	258
13.1.2	Results	267
13.1.3	Conclusions	278
	Appendix 13A	278
	References	280

Part IV Applications: Solar Energy Conversion into Thermal Energy Part

14 Optimization of Solar Energy Collection Systems	285
14.1 General Approach	285
14.1.1 Determination of the Optimal Solution	286
14.1.2 Collectors with Uniform Properties	290
14.1.3 Collectors with Non-uniform Properties	292
14.1.4 Example and Discussion	293
14.2 More Involved Treatment	296
14.2.1 Introduction	296
14.2.2 Theory	297
14.2.3 Solar Energy Applications	299
14.2.4 Economical Indices	300
14.2.5 Meteorological and Actinometric Data	303
14.2.6 Model Implementation	303
14.2.7 Solar Collectors with Optimal Uniformly Distributed Parameters	306
14.2.8 Solar Collectors with Optimal Non-uniformly Distributed Parameters	311
14.2.9 Conclusions	315
References	315
15 Flat-Plate Solar Collectors. Optimization of Absorber Geometry	317
15.1 Optimization of Absorber Geometry by Using Economic Considerations	317
15.1.1 Absorber Plate of Uniform Thickness	318
15.1.2 Absorber Plate of Variable Thickness	321
15.1.3 The Optimal Fin Width	324
15.1.4 Discussion and Conclusions	326
15.2 More Realistic Approach	326
15.2.1 Introduction	326
15.2.2 Meteorological Data	327
15.2.3 Model Implementation	328
15.2.4 Uniform Fin Thickness	328
15.2.5 Variable Fin Thickness	334
15.2.6 Conclusions	342
Appendix 15A	342
Appendix 15B	347
References	348

16 Optimal Time-Dependent Operation of Open Loop Solar Collector Systems	349
16.1 Simple Variational Approach for Maximum Exergy Extraction	350
16.1.1 Model of Flat Plate Solar Collector Operation	350
16.1.2 Optimal Strategy for Maximizing the Collected Exergy	351
16.2 Optimal Control of Flow for Maximum Exergy Extraction	354
16.2.1 Introduction	354
16.2.2 Meteorological Database	355
16.2.3 Transient Solar Energy Collection Model	355
16.2.4 Optimum Operation	357
16.2.5 Optimum Operation	363
16.2.6 Aspects of Controller Design	367
16.2.7 Conclusions	369
References	370
17 Optimal Time-Dependent Operation of Closed Loop Solar Collector Systems	373
17.1 Classification and Simple Approach	373
17.1.1 Performance Criteria	374
17.1.2 Systems with Storage at Uniform Temperature	375
17.1.3 Systems with Stratified Storage Tanks	378
17.1.4 Comparison and Discussions	382
17.2 More Realistic Approach for Systems with Fully Mixed Water Storage Tanks	383
17.2.1 Introduction	383
17.2.2 Closed Loop System	383
17.2.3 Flow Controllers	384
17.2.4 Operation Model	385
17.2.5 Optimal Control	388
17.2.6 Model Implementation	390
17.2.7 Results and Discussions	394
17.2.8 Conclusions	403
Appendix 17A	404
Appendix 17B	404
Appendix 17C	406
References	409
18 Optimal Flow Controllers	411
18.1 Optimal Control	411
18.2 Implementation	416
18.3 Comparison and Discussions	417
References	419

Part V Applications: Heat Engines

19 Endoreversible Heat Engines	423
19.1 Endoreversible Heat Engine Model	423
19.2 Implementation of the Optimal Control Theory	425
19.2.1 Definitions	425
19.2.2 Formulation of the Optimal Control Problem	426
19.2.3 Application of the Maximum Pontryagin Principle	427
19.2.4 Properties of the Solutions of Optimal Control Problems	428
19.3 Optimal Performances	428
19.3.1 Maximum Power	429
19.3.2 Maximum Efficiency	438
19.3.3 Conclusion	444
References	444
20 Diesel Engines	445
20.1 Engine Model	445
20.1.1 Fuel Combustion at Finite Speed	445
20.1.2 Modeling of Losses	446
20.1.3 Conventional Piston Path	448
20.2 Optimization Procedure	449
20.2.1 Steps (1)–(3). Processes When Power Is not Generated	450
20.2.2 Stage (4). Allocation of Time Durations for Processes When Power Is not Generated	452
20.2.3 (5) Expansion	453
20.2.4 (6) Maximizing the Net Mechanical Work	457
20.3 Optimal Trajectories and Controls	457
20.3.1 Heat Engine Configuration	457
20.3.2 Optimized Engine Operation	459
References	465
21 Optimization of Daniel Cam Engines	467
21.1 Introduction	467
21.2 Model	468
21.2.1 Daniel Cam Engine Representation	468
21.2.2 Mechanical and Thermal Model	469
21.2.3 Dimensionless Formulation	473
21.2.4 Optimization	474
21.2.5 Numerical Procedure	475
21.2.6 Model Implementation	476
21.3 Results and Discussions	478
21.3.1 Present Model Versus Simpler Approaches	478
21.3.2 Optimal Solution. Dependence on Design and Operation Parameters	487

21.4	Conclusions	499
