1	Introduction	1
1.1	Statement of the Problem	1
1.2	Project Aims	4
1.3	Thesis Layout	5
	References	6
2	Background on Viscosity and Lubrication	7
2.1	Definition of Viscosity	7
2.1.1	Viscosity Relation with Temperature	8
2.1.2	Viscosity Index	9
2.1.3	Viscosity and Pressure	9
2.1.4	Viscosity and Shear Rate	10
2.2	Viscosity Measurement	13
2.2.1	Capillary Viscometers	14
2.2.2	Rotational Viscometers	14
2.2.3	Falling Body Viscometers	16
2.2.4	Vibrational Viscometers	17
2.2.5	High Pressure Viscometers	18
2.2.6	High Shear Viscometers	20
2.3	Engine Lubricating Oil Composition	22
2.3.1	Base Oils	23
2.3.2	Viscosity Modifiers	24
2.3.3	Detergents	25
2.4	Oil Classification by Viscosity	26
2.5	Lubrication Principles in Mechanical Components	27
2.5.1	The Stribeck Curve	27
2.5.2	Journal Bearing Lubrication	29
2.5.3	Considerations for Journal Bearing Design	32
2.6	Conclusions	34
	References	34

3	Background on Ultrasound	37
3.1	Introduction to Ultrasound	37
3.2	Ultrasound and Material Properties	39
3.3	Ultrasonic Transducers	41
3.3.1	The Piezoelectric Effect	41
3.3.2	Ultrasonic Transducer Type	41
3.3.3	Other Type of Ultrasonic Transducers	44
3.4	Characteristics of Ultrasonic Signals	45
3.5	Transducers Arrangements	46
3.6	Reflection of Ultrasound Waves at Interface	48
3.6.1	Reflection and Transmission in a Three-Layered System	51
3.6.2	Reflection of Shear Waves at Solid-Liquid Boundary	53
3.7	Conclusions	57
	References	57
4	Literature Review	59
4.1	The Crystal Resonator	59
4.2	The Resonating Plate/Rod	60
4.3	Reflectance Methodologies	62
4.3.1	The Newtonian Reflection Model	62
4.3.2	The Greenwood Model	65
4.4	The Attenuation Method	66
4.4.1	Ultrasonic Spectroscopy Methods	67
4.5	Ultrasonic Resonator to Analyse Lubricating Oils	69
4.6	Comparison of Ultrasonic Viscometers and Conventional Viscometers	72
4.7	Conclusions	74
	References	75
5	A Novel Ultrasonic Model for Non-Newtonian Fluids	77
5.1	Introduction	77
5.2	The Maxwell Fluid Model	78
5.3	The Ultrasonic Model for Non-Newtonian Fluids	79
5.4	Comparison of Models	81
5.5	Non-Newtonian Ultrasonic Model Sensitivity Analysis	82
5.5.1	Reflection Coefficient	83
5.5.2	Fluid Density	86
5.5.3	Solid Density	86
5.6	Conclusions	87
	References	87

6	Viscosity Measurements at an Aluminium-Oil Boundary	89
6.1	Ultrasonic Apparatus	89
6.1.1	The Transducers	90
6.1.2	The Cables	91
6.1.3	Thermocouple Calibration	91
6.1.4	Test Lubricants	93
6.1.5	Experimental Protocol	93
6.2	Signal Processing	94
6.3	Conventional Reflectance Technique: Results	96
6.4	Conventional Reflectance Technique: Acoustic Mismatch	98
6.5	Conclusions	99
	References	100
7	The Matching Layer Method	101
7.1	Origins of the Matching Layer Methodology	101
7.2	Matching Layer Theory	103
7.3	Measurement Apparatus	107
7.3.1	Instrumentation	107
7.3.2	Test Cell and Matching Layer	108
7.3.3	Samples Tested	108
7.4	Signal Processing and Data Analysis	109
7.5	Results	111
7.5.1	Measurement Sensitivity Increment	111
7.5.2	Viscosity Results for Newtonian Oils	113
7.5.3	The Empirical Correlation Between Viscosity and Reflection Coefficient	114
7.5.4	Viscosity Results for Fully Formulated Engine Oils	116
7.6	Effect of Polymer Concentration and Excitation Frequency	118
7.7	Effect of Temperature on Ultrasonic Matching Layer Viscometry	122
7.7.1	Samples Tested	122
7.7.2	Experimental Protocol	122
7.7.3	Results	123
7.8	Effect of Pressure on Ultrasonic Matching Layer Viscometry	125
7.8.1	Materials	125
7.8.2	Signal Processing	127
7.8.3	Experimental Protocol	128
7.8.4	Results	128
7.9	Conclusions	132
	References	133

8	Viscosity Measurements in a Journal Bearing	135
