

Contents

1	Basics	1
1.1	Naming Conventions	1
1.2	Vector Calculus	2
1.2.1	Pixels and Voxels	2
1.2.2	The Gradient and Necessary Condition for a Minimum	3
1.2.3	Directional Derivative	3
1.2.4	Descent Direction	3
1.2.5	Descent Methods	4
1.3	Calculus of Variations	4
1.3.1	The Functional Derivative	6
1.3.2	Differentiation Rules	7
1.3.3	Functionals of Functions with Multiple Arguments	7
1.3.4	Functionals of Multiple Functions	8
1.3.5	The Functional Differential	9
1.4	Level Set Methods	9
1.4.1	Level Set Function	9
1.4.2	Level Set Evolution	11
1.4.3	Level Set Methods for Image Segmentation Problems	13
1.5	Variational Image Segmentation	16
1.5.1	Geodesic Active Contours	16
1.5.2	Active Contours Without Edges	18
2	Statistical Shape Models (SSMs)	21
2.1	Definition of Shape	22
2.2	An Explicit Linear Parametric Statistical Shape Model	24
2.3	An Implicit Linear Parametric Statistical Shape Model	31
2.4	Rigid Shape Alignment	39
2.4.1	Similarity Transformation	41
2.4.2	Rigid Alignment of Two Shape Configurations	41
2.4.3	Rigid Alignment of Multiple Shape Configurations	43

2.5	Problem: Limited Training Data.	44
2.5.1	Artificial Enlargement of Shape Variations.	46
2.5.2	Relaxation of Model-Constraints.	48
2.5.3	Model Partitioning	49
3	A Locally Deformable Statistical Shape Model (LDSSM)	53
3.1	Motivation	53
3.2	Mathematical Formulation of Our LDSSM	55
3.3	An Iterative Framework to Determine the Weight Fields.	58
3.3.1	General Idea: Demons-Based Approach	58
3.3.2	A Side Note to Optimal Weights for the SSM	60
3.3.3	Determination of the Weights for a Known Target Shape.	62
3.3.4	Determination of the Weights for Segmentation Problems.	65
4	Evaluation of the Locally Deformable Statistical Shape Model	75
4.1	Segmenting the Nasal Cavity and the Paranasal Sinuses	75
4.1.1	Description of the Paranasal Sinuses Database	78
4.1.2	Segmentation with Global Model Information	81
4.1.3	Experimental Setup and Results	88
4.2	Segmenting the Bones in the Human Knee	100
4.2.1	Motivation	100
4.2.2	Experimental Setup.	100
4.2.3	Results	104
4.3	Fitting the LDSSM to Range Scans of Faces.	106
4.3.1	The Basel Face Model: A Meta-Database for 3D Faces	107
4.3.2	Evaluating the Shape Approximation for Known Target Shapes.	109
4.3.3	Application: Reconstructing Incomplete Face Scans	116
5	Global-To-Local Shape Priors for Variational Level Set Methods.	125
5.1	Problems of the Iterative Segmentation Framework	126
5.2	Existing Variational Image Segmentation Approaches with Shape Priors.	127
5.2.1	Linear Subspace-Constrained Approaches.	127
5.2.2	Approaches with Additional Flexibility.	132
5.2.3	Drawbacks of Existing Approaches	137
5.3	Variational Formulation for a Global Shape Prior	138
5.3.1	Problem Formulation	139
5.3.2	An Exemplary Segmentation Problem	141

5.3.3	General Solution for Arbitrary Segmentation Problems . . .	143
5.3.4	Extension of the Approach by the Trained Weight Distribution.	144
5.3.5	Consideration of Rigid Transformations	146
5.4	Variational Formulation for a Local Shape Prior	147
5.4.1	Motivation	147
5.4.2	Problem Formulation	148
5.4.3	Extension of Our Approach by the Trained Weight Distribution.	150
5.4.4	Finding a Solution to the Problem by Functional Gradient Descent	152
5.4.5	Obtaining the Functional Gradient	154
5.5	Global-to-Local Variational Formulation	162
5.5.1	Problems of the Variational Gradient Descent Approach	163
5.5.2	Connection Between the Global Approach and Our Local Approach	164
5.5.3	Combining the Global Approach and Our Local Approach	168
6	Evaluation of the Global-To-Local Variational Formulation	173
6.1	Extracting the Nasal Cavity and the Paranasal Sinuses from Two-Dimensional CT Slices	173
6.1.1	New Global-To-Local Approach Versus Global Approach by Tsai et al.	174
6.1.2	New Global-To-Local Approach Versus Former Segmentation Framework	185
6.2	Extracting the Nasal Cavity and the Paranasal Sinuses from Three-Dimensional CT Data	191
6.2.1	New Global-To-Local Approach Versus Global Approach by Tsai et al.	192
6.2.2	New Global-To-Local Approach Versus Former Segmentation Framework	199
7	Conclusion and Outlook	207
7.1	Open Topics and Future Work.	209
	Appendix A: Results from Sect. 4.1.3	211
	Appendix B: Results from Sect. 6.1.1	221
	Appendix C: Results from Sect. 6.1.2	231
	Appendix D: The Sample Covariance Matrix	241

Appendix E: More Examples for the Global Variational Formulation	245
Appendix F: Rigid Shape Alignment	249
Own Publications and References	253

From Global to Local Statistical Shape Priors
Novel Methods to Obtain Accurate Reconstruction
Results with a Limited Amount of Training Shapes
Last, C.

2017, XXI, 259 p. 84 illus., 64 illus. in color., Hardcover
