

Contents

1	Introduction into the Field of Conducting Polymers.	1
2	Basic Features During the Redox Transformation of CPs and the Coupled Phenomena	3
2.1	Electrochemical Perturbation, Leading to Phenomenological Changes	3
2.2	Color Change	3
2.3	Mass Change	4
2.4	Conductance Change	4
2.5	Diamagnetic/Paramagnetic Changes	5
2.6	Volume Changes	5
2.7	Structural Changes	5
2.8	Transport Processes in the Adjacent Solution Layer.	6
	References.	6
3	Overview of in situ Combined Electrochemical Techniques.	7
3.1	Single in situ Electrochemical Methods	7
3.1.1	Coupled Color Changes—Spectroelectrochemistry in the UV-VIS-NIR Region.	7
3.1.2	Changes in the Chemical Bonds' Nature—in situ FTIR and RAMAN Spectroscopy	8
3.1.3	Diamagnetic/Paramagnetic Changes—in situ ESR Spectroscopy	9
3.1.4	In situ NMR Spectroscopy	10
3.1.5	Coupling with Mass Change—the Electrochemical Quartz Crystal Micro/Nanogravimetry (EQCM or EQCN) and the Radiotracer Technique	10
3.1.6	Resulted Conductance Change—a.c. Conductance, Electrochemical Impedance Measurements	11

3.1.7	Effects Monitored in the Solution—Laser Beam Deflection	12
3.1.8	Subsequent Volume Change	13
3.1.9	Visualization of Structural Changes: Ellipsometry, Surface Plasmon Resonance, X-Ray Absorption Fine Structure Spectroscopy (EXAFS).	13
3.2	Combination of Two Single in situ Electrochemical Techniques in a Hyphenated Mode.	14
3.2.1	Simultaneous Combination of the Electrochemical Electron Spin Resonance (SEESR) and the in situ a.c. Conductance Techniques.	14
3.2.2	Simultaneously Applied Electron Spin Resonance (SEESR) and in situ Spectroelectrochemistry	15
3.2.3	Combination of in situ UV-Vis-NIR Spectroelectrochemical and in situ a.c. Conductance Measurements	15
3.2.4	In situ Piezoelectric Spectroelectrochemistry.	16
3.2.5	In situ FTIR Spectroelectrochemistry and Ellipsometry	18
3.2.6	Combined Scanning Electrochemical—Atomic Force Microscopy AFM	19
3.2.7	Current-Sensing Atomic Force Microscopic (CS-AFM) and Spectroscopic Measurements.	19
3.2.8	Combining Scanning Electrochemical Microscopy with Infrared Attenuated Total Reflection Spectroscopy	19
3.2.9	Combined Electrochemical Impedance EIS and FTIR-ATR.	20
	References.	20
4	Applications of the in situ Combined Electrochemical Techniques: Problems and Answers Attempted by the in situ Combined Methods	25
4.1	Electrodeposition	25
4.2	Chain-Growth Process	27
4.3	Nucleation and Growth Steps	27
4.4	Mechanistic Issues	28
4.5	Regular/Irregular Behavior of the Deposited Film	29
4.6	Specific Dopant–Polymer Interactions.	30
4.7	Monitoring the Formation of CP Composites	31
4.8	Details of the Redox Switching	33
4.9	Development of the Conductance	38
4.10	p-Type and n-Type Doping	40
4.11	Identification of the Charge Carriers.	43

4.12	Overoxidation	50
4.13	Structural Questions	51
4.14	Miscellaneous Issues.	52
	References.	53
5	Outlook	63
	References.	65
