

Contents

1	Historical and Introductory Account of Bohmian Mechanics	1
1.1	Introduction	1
1.2	Closed Quantum Systems. Quantum Trajectories	8
1.2.1	Quantum Hydrodynamics Framework	8
1.2.2	The Equations of Motion for One Particle	12
1.2.3	Restricted Probability and Tubes	23
1.2.4	Local and Expectation Values	29
1.2.5	Complex Quantum Trajectories	31
1.2.6	Many Particle Systems	35
1.3	Open Quantum Systems. Quantum Stochastic Trajectories	38
1.3.1	The Causal Stochastic Approach	38
1.3.2	Diffusion. Quantum Brownian Motion	40
1.3.3	Stochastic Weak Values	46
1.3.4	The Density Matrix	47
1.4	Dynamical Aspects of the Measuring Process	50
	References	54
2	Some Selected Applications of Bohmian Mechanics	63
2.1	Introduction	63
2.2	Ermakov–Bohm Invariants for the Time-Dependent Harmonic Oscillator	64
2.3	Boundary Conditions in Tunneling	71
2.4	Quantum Potential and Uncertainty Principle in Tunneling	75
2.5	Scattering via Invariants of Bohmian Mechanics	77
2.5.1	Quantum Traversal Time	81
2.6	Wave Propagator for the Guiding Wave Function	83
2.7	Bohmian Trajectories of Airy Packets	86
2.8	Airy and Gaussian Slits. Quantum Focal Point	91
2.9	Detection of Inertial and Gravitational Masses with Airy Wave Packets	93

2.10	The Geometric Phase	99
2.10.1	The Aharonov–Bohm Effect	100
2.10.2	Quantum Vortices	102
2.11	Bohmian Formulation of the Gross–Pitaevskii Equation	103
2.12	Dissipation in the Caldirola–Kanai Model	104
2.12.1	Free Gaussian Wave Packet	108
2.12.2	Interference of Two Gaussian Wave Packets	112
2.12.3	Linear Potential	113
2.12.4	Damped Harmonic Oscillator	115
	References	120
3	Bohmian Stochastic Trajectories	125
3.1	Introduction	125
3.2	The Schrödinger–Langevin Equation	129
3.3	The Schrödinger–Langevin–Bohm Equation	134
3.4	The Ramsauer–Townsend Effect in a Dissipative Medium	139
3.5	Tunneling Through a Dissipative Barrier	147
3.6	The Plasma Fluid Formulation Within Bohmian Mechanics	151
3.7	The Schrödinger Equation for an Extended Electron via Bohmian Mechanics	153
3.8	Surface Diffusion	156
3.8.1	The Bohmian–Brownian Motion	164
3.8.2	The Harmonic Oscillator Motion	169
3.9	The Generalized Schrödinger–Langevin–Bohm Equation	171
	References	176
4	Continuous Quantum Measurements in the Bohmian Framework	181
4.1	Introduction	182
4.2	Measurement and the Characteristic Function	183
4.3	A Short Introduction to Restricted Path Integrals	191
4.3.1	Quantum Corridors	196
4.3.2	Some Simple Applications of the RPI Formalism	198
4.4	Some Equations Derived from the Restricted Path Integral	201
4.4.1	The Schrödinger Equation	201
4.4.2	The Master Equation	204
4.4.3	The Stochastic Schrödinger Equation	205
4.4.4	The Bohmian Equations	206
4.5	The Nonlinear Schrödinger Equation for Continuous Measurement	206
4.6	The Schrödinger–Langevin–Bohm Equation for Continuous Quantum Measurement	208
4.7	Bohmian Time: Dividing Line Between Quantum and Classical Trajectories	213

4.8	Some Simple Applications	216
4.8.1	Stability of Quantum Stochastic Trajectories.	219
4.8.2	Free Gaussian Wave Packet	222
4.8.3	Linear Potential.	225
4.8.4	Quadratic Potential	226
4.8.5	The Schuch–Chung–Hartmann Equation for Continuous Quantum Measurement.	228
4.9	Classical and Quantum Lyapunov Exponents.	229
	References	233
	Epilogue	237
	Index	239

Bohmian Mechanics, Open Quantum Systems and
Continuous Measurements

Nassar, A.B.; Miret-Artes, S.

2017, XVII, 241 p. 19 illus., 12 illus. in color., Hardcover
