

Contents

1	Positive Polynomials	1
1.1	Types of Polynomials	1
1.2	Positive Polynomials	3
1.3	Toeplitz Positivity Conditions	8
1.4	Positivity on an Interval	10
1.5	Details and Other Facts	14
1.5.1	Chebyshev Polynomials	14
1.5.2	Positive Polynomials in $\mathbb{R}[t]$ as Sum-of-Squares	15
1.5.3	Proof of Theorem 1.11	15
1.5.4	Proof of Theorem 1.13	17
1.5.5	Proof of Theorem 1.15	18
1.5.6	Proof of Theorem 1.17	19
1.5.7	Proof of Theorem 1.18	19
1.6	Bibliographical and Historical Notes	20
	References	21
2	Gram Matrix Representation	23
2.1	Parameterization of Trigonometric Polynomials	23
2.2	Optimization Using the Trace Parameterization	28
2.3	Toeplitz Quadratic Optimization	32
2.4	Duality	33
2.5	Kalman–Yakubovich–Popov Lemma	35
2.6	Spectral Factorization from a Gram Matrix	36
2.6.1	SDP Computation of a Rank-1 Gram Matrix	37
2.6.2	Spectral Factorization Using a Riccati Equation	39
2.7	Parameterization of Real Polynomials	41
2.8	Choosing the Right Basis	44
2.8.1	Basis of Trigonometric Polynomials	44
2.8.2	Transformation to Real Polynomials	48
2.8.3	Gram-Pair Matrix Parameterization	49

2.9	Interpolation Representations	53
2.10	Mixed Representations	56
2.10.1	Complex Polynomials and the DFT	56
2.10.2	Cosine Polynomials and the DCT	57
2.11	Fast Algorithms	58
2.12	Details and Other Facts	60
2.12.1	Writing Programs with Positive Trigonometric Polynomials	60
2.12.2	Proof of Theorem 2.16	63
2.12.3	Proof of Theorem 2.19	64
2.12.4	Proof of Theorem 2.21	65
2.13	Bibliographical and Historical Notes	65
	References	68
3	Multivariate Polynomials	71
3.1	Multivariate Polynomials	71
3.2	Sum-of-Squares Multivariate Polynomials	74
3.3	Sum-of-Squares of Real Polynomials	76
3.4	Gram Matrix Parameterization of Multivariate Trigonometric Polynomials	78
3.5	Sum-of-Squares Relaxations	82
3.5.1	Relaxation Principle	83
3.5.2	A Case Study	84
3.5.3	Optimality Certificate	87
3.6	Gram Matrices from Partial Bases	89
3.6.1	Sparse Polynomials and Gram Representation	90
3.6.2	Relaxations	92
3.7	Gram Matrices of Real Multivariate Polynomials	94
3.7.1	Gram Parameterization	94
3.7.2	Sum-of-Squares Relaxations	95
3.7.3	Sparseness Treatment	96
3.8	Pairs of Relaxations	98
3.9	The Gram-Pair Parameterization	100
3.9.1	Basic Gram-Pair Parameterization	100
3.9.2	Parity Discussion	101
3.9.3	LMI Form	103
3.10	Polynomials with Matrix Coefficients	106
3.11	Details and Other Facts	111
3.11.1	Transformation Between Trigonometric and Real Nonnegative Polynomials	111
3.11.2	Pos3Poly Program with Multivariate Polynomials	113
3.11.3	A CVX Program Using the Gram-Pair Parameterization	114

3.12	Bibliographical and Historical Notes	117
	References.	120
4	Polynomials Positive on Domains.	123
4.1	Real Polynomials Positive on Compact Domains	123
4.2	Trigonometric Polynomials Positive on Frequency Domains	127
4.2.1	Gram Set Parameterization	129
4.2.2	Gram-Pair Set Parameterization.	133
4.3	Bounded Real Lemma	134
4.3.1	Gram Set BRL	134
4.3.2	BRL for Polynomials with Matrix Coefficients	137
4.3.3	Gram-Pair Set BRL.	138
4.4	Positivstellensatz for Trigonometric Polynomials	140
4.5	Proof of Theorem 4.11	142
4.6	Bibliographical and Historical Notes	144
	References.	147
5	Design of FIR Filters.	149
5.1	Design of FIR Filters	149
5.1.1	Optimization of Linear-Phase FIR Filters	151
5.1.2	Magnitude Optimization	152
5.1.3	Approximate Linear-Phase FIR Filters.	154
5.2	Design of 2D FIR Filters	157
5.2.1	2D Frequency Domains.	157
5.2.2	Linear-Phase Designs	159
5.2.3	Approximate Linear-Phase Designs.	164
5.3	FIR Deconvolution	165
5.3.1	Basic Optimization Problem	167
5.3.2	Deconvolution of Periodic FIR Filters.	168
5.3.3	Robust H_∞ Deconvolution	170
5.3.4	2D H_∞ Deconvolution	171
