

Contents

Part I Fundamentals

1	Metal Processing Technology in General—Importance of Hierarchical Classification	19
1.1	Various Metal Removal Processing Methods and Available Kinds of Machine Tool	21
1.2	Various Metal Non-removal Processing Methods and Their Characteristic Features	32
1.3	Phase-Changing Processing	37
	References	40
2	Choosing Guide in Form-Generating Movement and New Approaches to Machining Technology—Correlation Diagramme Among Machining Method—Tools—Attachments—Machine Kinds	41
2.1	Facing Problems in Choosing Guide for Preferable Machining Method	42
2.2	<i>Flow of Force</i> and Description of Form-Generating Movement	46
2.2.1	Functional Description of a Machine Tool as a Whole	49
2.2.2	Form-Generating Movement in Machining Function-Integrated Kind	50
2.3	Trial to Establish Choosing Guide for Kind of Machine Tool and Machining Method	60
2.4	Linkage Diagramme of Structural Configuration Entities	62
	References	67

Part II Determinants for Functional and Performance Specifications of Machining Space

3	Raw Materials for Work, Engineering Materials and Swarf Discharge.	71
3.1	Supply of Raw Materials to Machining Space and Material Efficiency	71
3.2	Engineering Materials in General	74
3.3	Swarf and Its Discharge from Machining Space.	78
3.3.1	Swarf Generation and Cutting Fluid	78
3.3.2	Swarf Discharge from Machining Space	85
	References	89
4	Structural Body Components Closely Allocated Around Machining Space—Core for User-oriented Platform System.	91
4.1	Tapers in General and Facing Engineering Problems	94
4.2	Spindle Nose and Tapered Hole	96
4.3	Turret Head	106
4.4	Linear Travelling Table with Built-in-Rotary Table and Auxiliary Indexing Round Table	111
	References	118
5	Work and Tool Holding Devices—Chuck, Centre, Mandrel and Tool Holder	119
5.1	Chuck and Concerns	123
5.1.1	Jaw Chuck	123
5.1.2	Collet Chuck	133
5.1.3	Driver	135
5.2	Centre and Concerns	138
5.3	Mandrel and Milling Chuck	141
5.4	Perspective for Research into Jaw and Collet Chucks	145
	References	151
6	In-Process and On-the-Machine Measurement	153
6.1	In-Process Measurements in General	156
6.2	On-the-Machine and In-Process Measurements in Practice	161
	References	168
7	Concept of “Platform”, Its Application and Modular Tooling System	169
7.1	First-Hand View of Whole Concept for Modular Design at Present	171
7.2	Some Practical Applications of “ <i>Platform Concept</i> ”	173
7.3	Concept of “Platform-Based Unit Construction”	177
7.3.1	Variants for Practical Use—in Case of “Mill-Turn”	179

7.3.2	First-Hand View for Facing Research and Engineering Subjects	181
7.4	Modular Tooling System	186
	References	191

Part III Practice and Theory at Machining Point

8	Various Machining Methods and Tools in General	195
8.1	Turning	195
8.2	Milling	198
8.3	Drilling, Reaming and Tapping	201
8.4	Planing and Shaping	205
8.5	Broaching.	206
8.6	Gear Machining	207
8.7	Grinding.	212
9	Mechanisms for Metal Cutting and Grinding.	217
9.1	Cutting.	218
9.1.1	Cutting Model.	218
9.1.2	Cutting Force	221
9.1.3	Cutting Temperature	229
9.1.4	Tool Wear.	234
9.1.5	Surface Quality	237
9.2	Modelling of Grinding	239
9.2.1	Grinding Wheel and Stone	239
9.2.2	Grinding Model	240
9.2.3	Grinding Force	243
9.2.4	Grinding Temperature.	245
9.2.5	Wheel Life	250
9.2.6	Surface Quality	251
9.3	Machinability	252
	References	255
10	Numerical Simulation for Metal Cutting and Grinding.	257
10.1	Cutting Simulation	257
10.1.1	Outline of Simulation Models.	257
10.1.2	Cutting Force Coefficients Method	258
10.1.3	Finite Element Method	261
10.1.4	Cutting Energy Method.	265
10.1.5	Cutting Temperature Simulation	268
10.1.6	Tool Wear Progress Simulation.	270
10.2	Grinding Simulation.	274
10.2.1	Micro-scale Modelling	275
10.2.2	Macro-scale Modelling	277
	References	279

Appendix A: Quick Calculation Method for Cutting Force 283

**Appendix B: Core Design Principles for Machine Body
and Structural Body Component 289**

Theory and Practice in Machining Systems
