1	Introduction	1
	References	4
Part I Concepts and Methods		
2	Quantum Mechanical Background	9
2.1	General Principles	10
2.1.1	Wavefunctions	10
2.1.2	Superposition Principle	11
2.1.3	Measurements of Physical Quantities	11
2.1.4	Time Evolution Principle and Schrödinger Equation	16
2.2	Observables and Correspondence Principle	20
2.2.1	Observables Corresponding to Common Physical Quantities	20
2.2.2	Angular Momentum Operators	22
	References	24
3	Molecular Hamiltonian Operators	25
3.1	The Non-relativistic Coulomb Hamiltonian Operator	25
3.2	Separation of the Electronic and Nuclear Motions	28
3.2.1	General Overview	28
3.2.2	The Adiabatic Electronic Basis Set	31
3.2.3	The Born-Oppenheimer and Adiabatic Approximations	33
3.2.4	Breakdown of the Born-Oppenheimer Approximation *	37
3.2.5	The Off-Diagonal Hellmann-Feynman Theorem *	38
3.2.6	The Electronic Basis Sets: An Overview	40

3.3	Molecular Coordinates	43
3.3.1	Separation of the Total Center of Mass and Internal Motions of the Molecular System *	43
3.3.2	Nuclear Center of Mass Coordinates *	46
3.3.3	Internal (Shape/Deformation) and Rotational Coordinates *	48
3.3.4	The Potential Energy Surface and the Nuclear Hamiltonian Operator	53
3.4	Interaction with External Fields	54
3.5	Illustration with the H ₂ Molecule.	60
3.5.1	Atomic Orbitals	61
3.5.2	Molecular Orbitals	62
3.5.3	Electronic Configurations	64
3.5.4	Electronic Wavefunctions	66
3.5.5	Potential Energy Surfaces	69
3.5.6	Vibrational Eigenstates in the Electronic Ground State.	70
3.6	Complements to Chapter 3.	72
3.6.1	Example of Space-Fixed (SF) Coordinates *	72
3.6.2	Example of Nuclear Space-Fixed (NSF) Coordinates *	74
3.6.3	Chain Rule	77
	References	78
4	Vibronic Couplings.	81
4.1	Conical Intersections	81
4.2	The Jahn-Teller Prototype *	95
4.3	Diabatic Representations	100
4.4	Diabatisation by Ansatz	103
	References	108
5	Choosing the Set of Coordinates for the Nuclei	111
5.1	Normal Coordinates	112
5.2	Examples of Valence and Jacobi Coordinates for Tri-atomic Systems.	114
5.3	Examples of Internal Coordinates for Tetra-atomic Systems	119
5.4	Vector Parametrization of <i>N</i> -atom Molecular Systems	121
5.5	Examples of BF Frames.	123
	References	124
6	The Kinetic Energy Operator in Curvilinear Coordinates	127
6.1	Classical Kinetic Energy	127
6.1.1	Classical Lagrangian Kinetic Energy	127
6.1.2	Classical Hamiltonian Kinetic Energy.	131

6.2	Non Relativistic Quantum Kinetic Energy Operator.	133
6.2.1	General Expressions	133
6.2.2	Change of Normalization Convention *	137
6.2.3	Quasi-Momentum Operators	139
6.3	Applications in Molecular Physics	141
6.3.1	General Case	142
6.3.2	Nuclear Angular Momentum	145
6.4	Polyspherical Coordinates	148
6.5	Examples	152
6.6	The Problem of Singularities in the KEO *	157
6.7	Complements to Chapter 6.	159
6.7.1	Chain Rule and Laplacian Operator	159
6.7.2	Adjoint Operator $\hat{P}_i^\dagger$ of the Momentum Operator $\hat{P}_i = -i\hbar \frac{\partial}{\partial q^i}$	160
6.7.3	Metric Tensor for Polar Coordinates.	161
6.7.4	Computation of the Laplacian Operator in Polar Coordinates.	163
	References	165
7	Group Theory and Molecular Symmetry	167
7.1	Introduction	167
7.2	The Harmonic Vibrations of Water	171
7.2.1	Standard Point-Group Treatment.	172
7.2.2	Rigorous Molecular-Symmetry Treatment *	178
7.2.3	Ground-State Dipole Moment and Potential Energy Surface	182
7.3	The Vibronic Hamiltonian of the Butatriene Cation	185
7.4	The Umbrella Inversion of Twice-Deuterated Ammonia	194
	References	198
8	Introduction to Numerical Methods	201
8.1	The Standard Method.	202
8.1.1	Variational Principle	202
8.1.2	The Standard Method in the Finite Basis Set Representation (FBR)	203
8.1.3	Discrete Variable Representation (DVR).	207
8.1.4	The Primitive Basis Set: A Summary	216
8.1.5	Contracted Intermediate Basis Set Functions	216
8.1.6	Integrators for the Time-Dependent Schrödinger Equation	218
8.2	The Time-Dependent Hartree (TDH) Approach	225
8.2.1	TDH Equations *	226
8.2.2	TDH Equations: 2-Dimensional Case	232

8.3	The Multi-configuration Time-Dependent Hartree Method.	234
8.3.1	MCTDH Fundamentals.	234
8.3.2	Remarks on Densities *.	237
8.3.3	MCTDH Equations of Motion (MCTDH-EOM) *.	239
8.3.4	Examples	245
8.3.5	Mode Combination.	246
8.3.6	Summary and Multi-layer MCTDH	247
8.3.7	Electronic States	249
8.3.8	Propagation in MCTDH *.	250
8.4	Relaxation and Improved Relaxation *.	255
8.4.1	Propagation in Imaginary Time.	255
8.4.2	Improved Relaxation: An MCSCF Procedure *.	256
8.4.3	The Davidson Algorithm *.	259
8.4.4	Conclusion *.	261
8.5	Complex Absorbing Potentials (CAPs)	261
8.6	Flux Analysis.	265
8.7	Representation of the Hamiltonian Operator	272
8.7.1	The Product Form.	272
8.7.2	The POTFIT Algorithm *.	274
8.7.3	Contraction in POTFIT *.	275
8.7.4	Error Estimate *.	276
8.7.5	Weights *.	277
8.8	Complement to Chapter 8: MCTDH-EOM for $g^{(\kappa)} \neq 0$ *.	278
