

Contents

1	Background Material	1
1.1	Hamiltonian Dynamics	1
1.1.1	Symplectic Forms and Manifolds	1
1.1.2	Hamiltonian Dynamics and Hamiltonian Vector Fields	2
1.2	Integrable Hamiltonian Systems	7
1.3	Kähler Manifolds	8
1.4	Hyperkahler Manifolds and Structures	9
1.4.1	Hyperkahler Structures	9
1.4.2	Hyperkahler Structures in Coordinates	11
1.4.3	Standard Structures in \mathbf{R}^4 and \mathbf{R}^{4n}	12
1.4.4	Standard Structures and Self-duality	14
1.5	Dual Hyperkahler Structures	15
2	Hyperhamiltonian Dynamics	17
2.1	The Hyperhamiltonian Evolution Equations	17
2.2	Hamiltonian versus Hyperhamiltonian Dynamics	18
2.3	Alternative Approach to the Evolution Equations	19
2.4	Hyperhamiltonian Flows and Dual Structures	21
2.4.1	Dual Hyperkahler Structures and Dual Hyperhamiltonian Dynamics	21
2.4.2	Dirac Vector Fields	22
2.5	First Integrals, Conservation Laws, and Poisson-like Brackets	23
2.5.1	First Integrals	23
2.5.2	Conservation Laws	25
2.5.3	Combining First Integrals and Conservation Laws	27
2.6	The Hyperkahler Form	28
2.6.1	General Setting	28
2.6.2	Hyperkahler Form for Low-Dimensional Standard Structures	29

2.7	Hyperkahler and Canonical Maps	31
2.7.1	Symplectic and Canonical Maps in Standard Hamiltonian Dynamics	32
2.7.2	Hyperkahler Maps	33
2.7.3	Canonical Maps	34
3	Canonical Maps	37
3.1	Characterization of Canonical Maps	37
3.1.1	Canonical Maps for Euclidean versus General Manifolds	38
3.1.2	Characterization for Structures in Standard Form	39
3.2	Canonical Property of the Hyperhamiltonian Flow	41
3.2.1	Preliminary Results	42
3.2.2	Proof of the Main Result	45
3.2.3	Canonical Maps and Holonomy	46
3.2.4	Canonical Property of Dirac Vector Fields	48
3.2.5	Canonical Maps in Euclidean \mathbf{R}^4	49
3.3	The Inverse Problem: General One-Parameter Groups of Canonical Transformations in \mathbf{R}^{4n}	51
3.3.1	The Case $n = 1$	51
3.3.2	The General Case	54
3.4	Dirac versus Hyperhamiltonian Canonical Vector Fields	58
3.5	Dirac Vector Fields and Self-duality	60
4	Hyperkahler Maps	63
4.1	Hyperkahler Transformations	63
4.1.1	Maps on Hyperkahler Manifolds	64
4.1.2	Orientation	65
4.2	Euclidean Spaces	66
4.2.1	Hyperkahler Structures	66
4.2.2	Hyperkahler and Strongly Hyperkahler Maps	67
4.2.3	The Infinitesimal Approach	69
4.3	The Space \mathbf{R}^4	70
4.3.1	The Infinitesimal Approach	70
4.4	The Space \mathbf{R}^8	71
4.5	The General Case: \mathbf{R}^{4n}	75
5	Integrable Hyperhamiltonian Systems	83
5.1	Quaternionic Oscillators	83
5.1.1	Integrable Hamiltonian Systems	83
5.1.2	Quaternionic Oscillators	85

5.2	Action-Spin Coordinates	87
5.2.1	The Simple Quaternionic Oscillator Dynamics	87
5.2.2	Action-Spin Coordinates	89
5.2.3	Generic Quaternionic Oscillators	89
5.3	Are Hyperhamiltonian Integrable Systems More General Than Hamiltonian Ones?	90
5.4	Dirac Systems and Dirac Oscillators	93
5.5	Symmetry Versus Integrability for Hyperhamiltonian Systems	97
5.5.1	Symmetry of Integrable Hyperhamiltonian Systems	97
5.5.2	Integrable Hyperhamiltonian Systems and Symmetry	103
6	Hyperhamiltonian Dynamics and Perturbation Theory	107
6.1	Perturbation Theory and Normal Forms	107
6.1.1	General Dynamical Systems	107
6.1.2	Poincaré-Dulac Normal Forms	110
6.1.3	Lie Transforms	115
6.1.4	Hamiltonian Dynamical Systems	117
6.1.5	Birkhoff-Gustavsson Normal Forms	118
6.2	Perturbation of Hyperhamiltonian Systems	119
6.2.1	Expansion of Hyperhamiltonian Vector Fields	120
6.2.2	Lie Transforms for Hyperhamiltonian Vector Fields	121
6.3	Lie Transforms and Quaternionic Oscillators	125
6.3.1	Simple Linear Quaternionic Oscillators ($n = 1$)	125
6.3.2	General Linear Quaternionic Oscillators ($n > 1$)	126
6.3.3	Discussion and Recapitulation of the Results	128
6.4	Normal Forms for Simple Quaternionic Oscillators	131
6.5	Normalization of Quaternionic Oscillators by Quaternionic Oscillators	132
6.5.1	Simple Quaternionic Oscillator	132
6.6	Normalization by Dirac Vector Fields	135
6.6.1	Simple Quaternionic Oscillator	136
6.6.2	General Quaternionic Oscillator	137
7	Physical Applications	139
7.1	The Pauli Equation	140
7.2	The Dirac Equation	143
7.2.1	Dirac Equation: Generalities	144
7.2.2	Dirac Equation: Standard Representation	144
7.2.3	Dirac Equation: Spinor Representation	146
7.2.4	Separating the Dirac Equation	146
7.2.5	Unitary Transformations and the Dirac Equation	147
7.2.6	The Foldy-Wouthuysen Transformation	148
7.2.7	The Cini-Touschek Transformation	148
7.2.8	The Mulligan Transformation	149

7.3 The Taub-NUT Metric	151
7.3.1 Construction of the Taub-NUT Metric	151
7.3.2 Quotient Hyperkahler Structures	154
7.3.3 Hyperkahler Structure and the Taub-NUT Metric	156
Appendix A: Holonomy	159
Appendix B: Variational Principles	165
Appendix C: Quaternions and Quantum Mechanics	169
References	173
Index	179

Lectures on Hyperhamiltonian Dynamics and Physical
Applications

Gaeta, G.; Rodríguez, M.A.

2017, XV, 182 p., Hardcover

ISBN: 978-3-319-54357-4
