

Contents

1	Introduction	1
1.1	Challenges of Today's RAN	3
1.1.1	Cost of Ownership	3
1.1.2	Capacity Expansion	5
1.1.3	Energy Consumption and Carbon Emissions	5
1.2	Cloud RAN - What Is the Big Idea?	6
1.2.1	Advantages	7
1.2.2	Challenges	8
1.3	Related Technologies	8
1.3.1	Network Virtualization	9
1.3.2	Network Functions Virtualization	9
1.3.3	Software-Defined Networking	9
1.4	Outline of Chapters	10
2	Virtualization and Cloud Computing	11
2.1	What Is Virtualization?	11
2.2	Why Virtualization?	13
2.3	Network Virtualization	13
2.3.1	Overlay Networks	15
2.3.2	Virtual Private Networks	15
2.3.3	Virtual Sharing Networks	18
2.3.4	Relation Between Virtual Networks	19
2.4	Network Functions Virtualization	20
2.4.1	What to Virtualize?	22
2.5	Wireless Virtualization	23
2.5.1	State of the Art in Wireless Virtualization	25
2.6	Cloud Computing	26
2.6.1	Cloud Services Models	26
2.6.2	Types of Clouds	29
2.6.3	Virtualization Versus Cloud Computing	30
2.7	Summary	31

3	Software-Defined Networks Principles and Use Case	
	Scenarios	33
3.1	Introduction	33
3.2	SDN Drivers	34
3.2.1	Technology Drivers	34
3.2.2	Business Drivers.	35
3.3	Architecture and Principles	35
3.3.1	Split Architecture	36
3.3.2	Open-APIs	36
3.3.3	Virtualization	36
3.3.4	Control Plane Signaling Protocol	37
3.4	Use Case Scenarios	37
3.4.1	SDN in Mobile Backhaul Networks	37
3.4.2	SDN in the Cloud	39
3.4.3	SDN in NFV and Service Chaining	40
3.4.4	SDN Based Mobile Networks	41
3.5	SDN Design Implementation Considerations	42
3.5.1	Scalability and High Availability	42
3.5.2	Reliability.	43
3.5.3	A Special Study: Controller to Switch Connectivity.	44
3.6	Summary	45
4	Virtualizing the Network Services: Network Function	
	Virtualization	47
4.1	NFV Architecture.	47
4.2	NFV Use Cases	50
4.3	NFV Challenges.	51
4.4	Service Function Chaining.	52
4.4.1	Openflow-Based SFC Solution.	52
4.4.2	Optical SFC	54
4.4.3	Virtualized Network Function Placement	55
4.5	Summary	56
5	SDN/NFV Telco Case Studies	57
5.1	Packet Core	57
5.1.1	Existing Solutions Problems.	58
5.1.2	Virtualization and Cloud Assisted PC.	59
5.2	Virtualized Customer Premises Equipment.	62
5.2.1	Requirements	63
5.2.2	Design	64
5.3	Summary	66
6	Radio Access Network Evolution.	67
6.1	Mobile Network Architecture.	67
6.1.1	End-to-End Architecture.	67
6.1.2	Packet Flow in a Mobile Network	68

6.2	Base Station Architecture	69
6.2.1	Legacy BS	70
6.2.2	Architecture of Distributed BS	70
6.3	Mobile Fronthaul and Backhaul	72
6.3.1	Backhaul	72
6.3.2	Fronthaul	74
6.4	Trends in Wireless Network Densification	76
6.4.1	Increasing Spectral Efficiency	77
6.4.2	Interference Mitigation	78
6.4.3	Millimeter Wave Cellular Systems	79
6.5	Small Cells and HetNets	79
6.5.1	Public Wi-Fi	82
6.6	Distributed Antenna Systems (DAS)	82
6.6.1	DAS or Small Cells?	83
6.7	Network Sharing	84
6.7.1	Challenges for eUTRAN Sharing	84
6.7.2	Standards Specifications	85
6.8	Summary	86
7	Cloud RAN	87
7.1	Cloud RAN: Definition and Concept	87
7.1.1	Centralization	88
7.1.2	Virtualization	88
7.1.3	Statistical Multiplexing	89
7.1.4	Multi-cell Cooperation	90
7.2	Potentials and Benefits of Cloud RAN Architecture	93
7.2.1	Potentials of Cloud RAN	93
7.2.2	Benefits of Cloud RAN	93
7.3	Cloud RAN Implementation Scenarios	95
7.3.1	RAN Protocol Architecture	95
7.3.2	Proposed Architectures for C-RAN	97
7.3.3	RAN as a Service (RANaaS)	100
7.4	Cloud RAN or Small Cells?	100
7.5	Cloud RAN Challenges and Research Frontiers	101
7.5.1	Challenges	101
7.5.2	Research Frontiers	103
7.5.3	Edge Cloud	105
7.6	Cloud RAN Market	106
7.7	Summary	107
	References	109

Cloud Mobile Networks

From RAN to EPC

Vaezi, M.; Zhang, Y.

2017, XVII, 117 p. 34 illus., Hardcover

ISBN: 978-3-319-54495-3
