

Contents

1	An Introduction to Time-Series Prediction	1
1.1	Defining Time-Series	1
1.2	Importance of Time-Series Prediction	2
1.3	Hindrances in Economic Time-Series Prediction	3
1.4	Machine Learning Approach to Time-Series Prediction	4
1.5	Scope of Machine Learning in Time-Series Prediction	6
1.6	Sources of Uncertainty in a Time-Series	11
1.7	Scope of Uncertainty Management by Fuzzy Sets	12
1.8	Fuzzy Time-Series	15
1.8.1	Partitioning of Fuzzy Time-Series	17
1.8.2	Fuzzification of a Time-Series	19
1.9	Time-Series Prediction Using Fuzzy Reasoning	22
1.10	Single and Multi-Factored Time-Series Prediction	26
1.11	Scope of the Book	28
1.12	Summary	29
	References	32
2	Self-adaptive Interval Type-2 Fuzzy Set Induced Stock Index Prediction	39
2.1	Introduction	40
2.2	Preliminaries	44
2.3	Proposed Approach	45
2.3.1	Training Phase	47
2.3.2	Prediction Phase	56
2.3.3	Prediction with Self-adaptive IT2/T1 MFs	59
2.4	Experiments	60
2.4.1	Experimental Platform	61
2.4.2	Experimental Modality and Results	61
2.5	Performance Analysis	65

2.6	Conclusion	67
2.7	Exercises.....	68
	Appendix 2.1	75
	Appendix 2.2: Source Codes of the Programs.....	82
	References.....	100
3	Handling Main and Secondary Factors in the Antecedent for Type-2 Fuzzy Stock Prediction.....	105
3.1	Introduction	105
3.2	Preliminaries.....	107
3.3	Proposed Approach.....	109
3.3.1	Method-I: Prediction Using Classical IT2FS	110
3.3.2	Method-II: Secondary Factor Induced IT2 Approach.	112
3.3.3	Method-III: Prediction in Absence of Sufficient Data Points	114
3.3.4	Method-IV: Adaptation of Membership Function in Method III to Handle Dynamic Behaviour of Time-Series [47–52]	120
3.4	Experiments	121
3.4.1	Experimental Platform.....	121
3.4.2	Experimental Modality and Results.....	122
3.5	Conclusion	127
	Appendix 3.1: Differential Evolution Algorithm [36, 48–50]	127
	References.....	129
4	Learning Structures in an Economic Time-Series for Forecasting Applications.....	133
4.1	Introduction	133
4.2	Related Work	136
4.3	DBSCAN Clustering—An Overview	137
4.4	Slope-Sensitive Natural Segmentation.....	139
4.4.1	Definitions.....	140
4.4.2	The SSNS Algorithm	143
4.5	Multi-level Clustering of Segmented Time-Blocks	145
4.5.1	Pre-processing of Temporal Segments.....	145
4.5.2	Principles of Multi-level DBSCAN Clustering	146
4.5.3	The Multi-level DBSCAN Clustering Algorithm.....	148
4.6	Knowledge Representation Using Dynamic Stochastic Automaton	149
4.6.1	Construction of Dynamic Stochastic Automaton (DSA)	152
4.6.2	Forecasting Using the Dynamic Stochastic Automaton	154
4.7	Computational Complexity	156

4.8	Prediction Experiments and Results	158
4.9	Performance Analysis	159
4.10	Conclusion	162
	Appendix 4.1: Source Codes of the Programs.	163
	References.	187
5	Grouping of First-Order Transition Rules for Time-Series	
	Prediction by Fuzzy-Induced Neural Regression.	189
5.1	Introduction	189
5.2	Preliminaries.	193
	5.2.1 Fuzzy Sets and Time-Series Partitioning	193
	5.2.2 Back-Propagation Algorithm	194
	5.2.3 Radial Basis Function (RBF) Networks.	195
5.3	First-Order Transition Rule Based NN Model	196
5.4	Fuzzy Rule Based NN Model.	201
5.5	Experiments and Results.	204
	5.5.1 Experiment 1: Sunspot Time-Series Prediction	204
	5.5.2 Experiment 2: TAIEX Close-Price Prediction	209
5.6	Conclusion	213
	Appendix 5.1: Source Codes of the Programs.	216
	References.	232
6	Conclusions	235
6.1	Conclusions	235
6.2	Future Research Directions.	236
	Index	237

Time-Series Prediction and Applications

A Machine Intelligence Approach

Konar, A.; Bhattacharya, D.

2017, XVIII, 242 p. 69 illus., 13 illus. in color., Hardcover

ISBN: 978-3-319-54596-7
