Notation	xvii
Part I Introduction	
1 Motivation and Outline	3
2 Brief Historical Overview of Control Systems, Mechatronics and Motion Control	9
2.1 Feedback Control and Adaptive Control	9
2.2 Mechatronics and Motion Control	15
3 Problem Statement for Mechatronic Systems	19
3.1 The Non-identifier Based Adaptive Motion Control Problem in Mechatronics	19
3.2 The Generalized Non-identifier Based Adaptive Control Problem	20
3.2.1 Considered Systems	21
3.2.2 Control Objectives	24
3.2.3 Admissible Reference Signals	25
3.2.4 Measurement Noise and Measurement Errors	26
4 Contributions of this Book	29
Part II Theory	
5 Mathematical Preliminaries	33
5.1 Norms	33
5.1.1 Vector Norms	33
5.1.2 Induced Matrix Norms	35
5.1.3 Some More Facts on Vector and Induced Matrix Norms	36

5.2	Function Properties and Function Spaces	37
5.2.1	Continuity and Uniform Continuity	38
5.2.2	Differentiable and Lipschitz Continuous Functions	40
5.2.3	Lebesgue Measure Theory and \mathcal{L}^p -Spaces	44
5.2.4	Barbălat's Lemma and Its Generalization	60
5.3	Solutions of Differential Equations	61
5.3.1	Solutions of Ordinary Differential Equations	61
5.3.2	Solutions in the Sense of Carathéodory	63
5.3.3	Solutions of Functional Differential Equations	65
5.3.4	Some Useful Lemmas	66
5.4	Linear Time-Invariant Single-Input Single-Output Systems	68
5.4.1	System Representations	68
5.4.2	Stability	70
5.4.3	Realization	72
5.4.4	Relative Degree	73
5.4.5	High-Frequency Gain	76
5.4.6	Minimum-Phase Systems	78
5.4.7	Byrnes-Isidori Form	82
5.4.8	Zero Dynamics	88
5.4.9	Controllable Canonical Form	91
5.4.10	Root Locus Center	96
5.5	Some Operator Examples of Operator Class \mathcal{T}	98
5.5.1	Nonlinear Functions	99
5.5.2	Linear Time-Invariant Systems	99
5.5.3	Input-to-State Stable Single-Input Single-Output Systems	100
5.5.4	Hysteresis	103
6	High-Gain Adaptive Stabilization	107
6.1	Motivation	108
6.1.1	An Illustrative Example	108
6.1.2	The Root Locus Method: An Alternative Motivation for High-Gain Output Feedback Control	110
6.2	Brief Historical Overview	115
6.3	Relative-Degree-One Systems	117
6.3.1	System Class $\mathcal{S}_1^{\text{lin}}$	117
6.3.2	Byrnes-Isidori Form for System Class $\mathcal{S}_1^{\text{lin}}$	119
6.3.3	High-Gain Adaptive Controller	119
6.3.4	Implementation and Simulation Results	126
6.4	Relative-Degree-Two Systems	126
6.4.1	System Class $\mathcal{S}_2^{\text{lin}}$	127
6.4.2	Byrnes-Isidori Form for System Class $\mathcal{S}_2^{\text{lin}}$	127

6.4.3	High-Gain Adaptive Controllers	128
6.4.4	Implementation and Simulation Results	145
7	High-Gain Adaptive Tracking with Internal Model	149
7.1	Motivation	149
7.2	Principle Idea: Serial Interconnection of Internal Model and High-Gain Stabilizable System.	151
7.2.1	Analysis in the Frequency Domain	152
7.2.2	Analysis in the Time Domain	153
7.3	Internal Model Design	155
7.3.1	Admissible Reference Signals	155
7.3.2	Design Procedure	156
7.3.3	Exemplary Design and Discussion.	157
7.4	Relative-Degree-One Systems.	161
7.5	Relative-Degree-Two Systems	163
7.6	Implementation and Simulation Results	164
8	Adaptive λ-Tracking Control	169
8.1	Motivation	170
8.2	Brief Historical Overview	171
8.3	Relative-Degree-One Systems.	173
8.3.1	System Class \mathcal{S}_1	173
8.3.2	Byrnes-Isidori Like Form for System Class \mathcal{S}_1	176
8.3.3	Adaptive λ -Tracking Controller.	176
8.3.4	Implementation and Simulation Results.	187
8.4	Relative-Degree-Two Systems	189
8.4.1	System Class \mathcal{S}_2	189
8.4.2	Byrnes-Isidori Like Form for System Class \mathcal{S}_2	190
8.4.3	Adaptive λ -Tracking Controllers	191
8.4.4	Implementation and Simulation Results.	211
9	Funnel Control	217
9.1	Motivation	218
9.2	Brief Historical Overview	220
9.3	Relative-Degree-One Systems.	222
9.3.1	System Class $\mathcal{S}_1^{\text{sat}}$	223
9.3.2	Byrnes-Isidori Like Form for System Class $\mathcal{S}_1^{\text{sat}}$	225
9.3.3	Performance Funnel.	226
9.3.4	Funnel Controllers.	229
9.3.5	Implementation and Simulations Results	248
9.4	Relative-Degree-Two Systems	251
9.4.1	System Class $\mathcal{S}_2^{\text{sat}}$	251
9.4.2	Byrnes-Isidori Like Form for System Class $\mathcal{S}_2^{\text{sat}}$	253
9.4.3	Performance Funnel.	254

9.4.4	Funnel Controllers	258
9.4.5	Implementation and Simulation Results	281
10	Non-identifier Based Adaptive Control with Internal Model	287
10.1	Motivation	287
10.2	Brief Historical Overview	287
10.3	Non-identifier Based Adaptive Control with Internal Model for <i>Unsaturated</i> Systems	288
10.4	Funnel Control with Internal Model and Anti-windup for <i>Saturated</i> Systems	293
10.4.1	Conditional Integration: A Simple Anti-windup Strategy	294
10.4.2	IM-Funnel Control with Anti-windup for Systems of Class $\mathcal{S}_1^{\text{sat}}$	304
10.4.3	IM-Funnel Control with Derivative Feedback and Anti-windup for Systems of Class $\mathcal{S}_2^{\text{sat}}$	308
10.5	Implementation and Simulation Results	314
 Part III Application		
11	Speed and Position Control of Industrial Servo-Systems	321
11.1	Modeling	322
11.1.1	Micro-Processor (Real-Time System)	323
11.1.2	Electrical Drive (Actuator)	323
11.1.3	Mechanics (Physical System)	327
11.1.4	Speed and Position Sensors (Instrumentation)	327
11.1.5	Friction	329
11.1.6	Models of Stiff and Flexible Industrial Servo-Systems	346
11.1.7	Laboratory Setup: Coupled Industrial Servo-Systems	351
11.2	Motion Control in Industry	357
11.2.1	Standard Control Methods	358
11.2.2	Advanced Control Methods	363
11.2.3	Friction Identification and Compensation	364
11.3	Non-identifier Based Adaptive Speed Control of Industrial Servo-Systems	365
11.3.1	Reduced-Order One-Mass System of Class $\mathcal{S}_1^{\text{sat}}$	366
11.3.2	Reduced-Order Two-Mass System of Class $\mathcal{S}_1^{\text{sat}}$	368
11.3.3	Two-Mass System with Disturbance Observer of Class $\mathcal{S}_1^{\text{sat}}$	377
11.3.4	Implementation, Experiments and Measurement Results	383
11.4	Non-identifier Based Adaptive Position Control of Industrial Servo-Systems	401

11.4.1	One-Mass System of Class $\mathcal{S}_2^{\text{sat}}$	402
11.4.2	Two-Mass System of Class $\mathcal{S}_2^{\text{sat}}$	403
11.4.3	Implementation, Experiments and Measurement Results.	415
12	Speed Control of Wind Turbine Systems	435
12.1	Introduction	435
12.1.1	Wind Energy: The White Hope of the “Energiewende”	435
12.1.2	Evolution of Wind Turbine Systems	437
12.1.3	Modern Wind Turbine Systems.	440
12.2	Modeling	445
12.2.1	Wind Power and Power Coefficient.	445
12.2.2	Aerodynamic Turbine Torque	448
12.2.3	Dynamic Models of Wind Turbine Systems with Rigid and Elastic Drive Train	451
12.3	Speed Funnel Control of Wind Turbine Systems	454
12.3.1	Speed Funnel Control of Wind Turbine Systems with Rigid Shaft	454
12.3.2	Speed Funnel Control of Wind Turbine Systems with Elastic Shaft	459
13	Joint Position Control of Rigid-Link Revolute-Joint Robotic Manipulators	469
13.1	Modeling	470
13.2	Joint Position Funnel Control	471
13.2.1	Motivation.	472
13.2.2	Control Objective	472
13.2.3	MIMO Performance Funnel.	474
13.2.4	MIMO Funnel Controller	475
13.3	Implementation.	487
13.3.1	Simulation Results.	487
13.3.2	Measurement Results.	491
14	Current Control of Electric Synchronous Machines	495
14.1	Motivation	496
14.2	Mathematical Preliminaries.	497
14.2.1	Matrix/Vector Notation for Three-Phase Systems	498
14.2.2	Balanced or Symmetric Three-Phase Signal Vectors	500
14.2.3	Wye (Star) and Delta Connected Three-Phase Systems.	502
14.2.4	Space Vector Theory in Matrix/Vector Notation	503
14.3	Modeling	510

14.3.1	Generic Model of Two-Level Voltage Source Inverters	512
14.3.2	Generic Model of Synchronous Machines	522
14.4	Current PI-Funnel Control of Synchronous Machines	534
14.4.1	Multiple-Input Multiple-Output PI-Funnel Control with Anti-windup	535
14.4.2	Reduced-Order System Models	539
14.4.3	Current PI-Funnel Control of Electrical Drive System	546
14.5	Implementation	553
14.5.1	Simulation Results	554
14.5.2	Measurement Results	556
 Part IV Conclusion		
15	Summary	561
16	Future Work	565
 Part V Problems and Solutions		
17	Function Properties and Function Spaces	569
17.1	Problems	569
17.2	Solutions	573
18	Existence and Uniqueness of Solutions	587
18.1	Problems	587
18.2	Solutions	588
19	System Properties	593
19.1	Problems	593
19.2	Solutions	596
20	Internal Model Design	605
20.1	Problems	605
20.2	Solutions	606
21	Applications	615
21.1	Problems	615
21.2	Solutions	622
