

Contents

1	Introduction	1
1.1	What Do We Mean by (Mathematical) Modeling?	1
1.2	Aspects of Mathematical Modeling: Example of Population Dynamics	3
1.3	Population Models with Restricted Resources	8
1.4	Dimensional Analysis and Scaling	12
1.5	Asymptotic Expansions	17
1.6	Applications from Fluid Mechanics	27
1.7	Literature	32
1.8	Exercises	32
2	Systems of Linear Equations	37
2.1	Electrical Networks	37
2.2	Space Frames	49
2.3	Constrained Optimization	60
2.4	Literature	68
2.5	Exercises	68
3	Basic Principles of Thermodynamics	75
3.1	The Model of an Ideal Gas and the Maxwell–Boltzmann Distribution	76
3.2	Thermodynamic Systems and the Thermodynamic Equilibrium	80
3.3	The First Law of Thermodynamics	81
3.4	The Second Law of Thermodynamics and the Notion of Entropy	85
3.5	Thermodynamic Potentials	95
3.6	The Legendre Transform	98
3.7	The Calculus of Differential Forms	99
3.8	Thermodynamics of Mixtures and the Chemical Potential	102

3.9	Chemical Reactions in Multi Species Systems	109
3.10	Equilibria of Chemical Reactions and the Mass Action Law	114
3.11	Kinetic Reactions	119
3.12	Literature	123
3.13	Exercises.	123
4	Ordinary Differential Equations.	131
4.1	One-Dimensional Oscillations.	131
4.1.1	Forced Oscillations	137
4.2	The Lagrangian and Hamiltonian Form of Mechanics	141
4.3	Examples from Population Dynamics	152
4.4	Qualitative Analysis, Phase Portraits.	155
4.5	The Principle of Linearized Stability	160
4.6	Stability of Linear Systems.	162
4.7	Variational Problems for Functions of One Variable	167
4.8	Optimal Control with Ordinary Differential Equations	183
4.9	Literature	189
4.10	Exercises.	190
5	Continuum Mechanics	197
5.1	Introduction	197
5.2	Classical Point Mechanics	199
5.3	From Particle Mechanics to a Continuous Medium	203
5.4	Kinematics	206
5.5	Conservation Laws	212
5.6	Constitutive Relations.	222
5.7	The Second Law of Thermodynamics in Continuum Mechanics	234
5.8	Principle of Frame Indifference.	242
5.9	Constitutive Theory for Viscous Fluids	247
5.10	Modeling of Elastic Solids	252
5.11	Electromagnetism	269
5.12	Dispersion.	287
5.13	Literature	288
5.14	Exercises.	288
6	Partial Differential Equations.	303
6.1	Elliptic Equations	303
6.1.1	Calculus of Variations.	304
6.1.2	The Fundamental Solution.	314
6.1.3	Mean Value Theorem and Maximum Principles	317
6.1.4	Plane Potential Flows, the Method of Complex Variables	319
6.1.5	The Stokes Equations	325
6.1.6	Homogenization	327

6.1.7	Optimal Control of Elliptic Differential Equations.	332
6.1.8	Parameter Identification and Inverse Problems	336
6.1.9	Linear Elasticity Theory	340
6.2	Parabolic Equations	344
6.2.1	Uniqueness of Solutions, the Energy Method	345
6.2.2	Large Time Behavior.	347
6.2.3	Separation of Variables and Eigenfunctions.	351
6.2.4	The Maximum Principle	354
6.2.5	The Fundamental Solution.	355
6.2.6	Diffusion Times.	358
6.2.7	Invariant Transformations	360
6.2.8	General Initial Data	361
6.2.9	Brownian Motion	362
6.2.10	Traveling Waves	365
6.2.11	Reaction Diffusion Equations and Traveling Waves	367
6.2.12	Turing Instability and Pattern Formation	374
6.2.13	Cahn–Hilliard Equation and Pattern Formation Processes.	381
6.3	Hyperbolic Conservation Laws.	385
6.4	The Wave Equation	393
6.5	The Navier–Stokes Equations	400
6.6	Boundary Layers	405
6.7	Literature	420
6.8	Exercises.	420
7	Free Boundary Problems	427
7.1	Obstacle Problems and Contact Problems.	428
7.2	Free Boundaries in Porous Media.	435
7.3	The Stefan Problem	446
7.4	Entropy Inequality for the Stefan Problem	453
7.5	Undercooled Liquids.	454
7.6	Gibbs–Thomson Effect	456
7.7	Mullins–Sekerka Instability.	458
7.8	A Priori Estimates for the Stefan Problem with Gibbs–Thomson Condition	461
7.9	Phase Field Equations.	464
7.10	Free Surfaces in Fluid Mechanics.	472
7.11	Thin Films and Lubrication Approximation	476
7.12	Literature	479
7.13	Exercises.	480
	Appendix A: Function Spaces	489
	Appendix B: Curvature of Hypersurfaces.	493
	References	499
	Index	505

Mathematical Modeling

Eck, C.; Garcke, H.; Knabner, P.

2017, XV, 509 p. 107 illus., 2 illus. in color., Softcover
