 Part I Fluid Mechanics Foundations		
2	Theoretical Foundations for Flows Involving Vorticity	11
2.1	Fluid Mechanics Equations in Inertial and Non-inertial Frames	11
2.1.1	Physical Quantities	11
2.1.2	Conservation Laws	12
2.1.3	Fluid-Mechanic Equations in a Non-inertial Frame	17
2.1.4	Fluid Mechanics Assumptions	26
2.1.5	Usual Cases - Equations of Euler and Bernoulli	29
2.2	Flow Kinematics and Vorticity	32
2.2.1	Flow Kinematics	32
2.2.2	Vorticity and Related Definitions	33
2.2.3	Helmholtz (First) Law	36
2.2.4	Helmholtz-(Hodge) Decomposition	36
2.2.5	Bounded and Unbounded Domain - Surface Map - Generalized Helmholtz Decomposition	37
2.3	Main Dynamics Equations Involving Vorticity	38
2.3.1	Circulation Equation	38
2.3.2	Vorticity Equation	40
2.3.3	Stretching and Dilatation of Vorticity	40
2.3.4	Alternative Forms of the Vorticity Equation	42
2.3.5	Vorticity Equation in Particular Cases	43
2.3.6	Pressure	44
2.3.7	Vortex Force, Image/Generalized/Bound Vorticity, Kutta–Joukowski Relation	45

2.4	Different Dimensions of Vorticity: Surface, Line and Points	47
2.5	Vorticity Moments, Variables and Invariants - Incompressible Flows	49
2.6	Main Theorems Involving Vorticity	52
2.6.1	Kelvin's Theorem	52
2.6.2	Lagrange's Theorem	52
2.6.3	Helmholtz Theorem.	53
2.6.4	Biot-Savart Law	54
2.7	Vortices in Viscous and Inviscid Fluid - Results and Classical Flows	57
2.7.1	Vortex in Inviscid Fluid	57
2.7.2	Vortex in Viscous Fluid - Standard Solutions	57
2.7.3	Life of a Vortex - Vortex Decay, Collapse and Stability	59
2.8	Surface Representations - Vortex Sheets	60
2.8.1	Introduction.	60
2.8.2	Vortex Sheets Kinematics	60
2.8.3	Vortex Sheets Dynamics	61
2.8.4	Vortex Sheet Convection and Stability	62
2.8.5	Vortex Surfaces in 2D.	62
2.9	Incompressible Flow Equations in Polar Coordinates - 2D and 3D Flows - Axisymmetric Flows.	63
2.9.1	2D Arbitrary Flow (Cylindrical Coordinates)	64
2.9.2	3D Arbitrary Flow (Cylindrical Coordinates)	64
2.9.3	3D Axisymmetric Flows with Swirl (Cylindrical Coordinates)	65
2.9.4	3D Axisymmetric Flows Without Swirl (Cylindrical Coordinates)	67
2.9.5	3D Arbitrary Flow (Spherical Coordinates).	68
2.9.6	3D Axisymmetric Flows with Swirl (Spherical Coordinates).	69
2.9.7	3D Axisymmetric Flows Without Swirl (Spherical Coordinates).	69
2.10	2D Potential Flows.	71
2.11	Conformal Map Solutions	73
2.11.1	Conformal Mapping - Definitions and Properties	73
2.11.2	Reference Airfoil Flow: Flow Around a Cylinder and Kutta Condition	74
2.11.3	Joukowski's Conformal Map.	74
2.11.4	Karman-Trefftz Conformal Map	76

2.11.5	Van de Vooren Conformal Map	77
2.11.6	Matlab Source Code	78
	References	80
3	Lifting Bodies and Circulation.	83
3.1	Characteristics of Lifting Bodies	83
3.1.1	Fluid Force on a Body: Lift, Drag, Moment and Center of Pressure	83
3.1.2	Center of Pressure, Aerodynamic Center and Quarter Chord Point of an Airfoil	86
3.1.3	Vorticity Associated with Lifting Bodies	89
3.1.4	Kutta Condition.	90
3.1.5	Kutta–Joukowski Relation.	91
3.2	Polar Data of an Airfoil and Related Engineering Models	93
3.2.1	Introduction.	93
3.2.2	Models for Large Angle of Attacks.	94
3.2.3	Dynamic Stall Models.	95
3.2.4	Inviscid Performances	96
3.2.5	Model of Fully-Separated Polar from Known Polar	97
3.3	Vorticity Based Theories of Two-Dimensional Lifting Bodies	99
3.4	Vorticity Based Theories of Thick Three-Dimensional Lifting Bodies	99
3.5	Inviscid Lifting-Surface Theory of a Wing.	99
3.6	Inviscid Lifting-Line Theory of a Wing.	100
3.6.1	Introduction.	100
3.6.2	Lifting Line Theory - From Circulation Distribution to Loads	101
3.6.3	Prandtl's Lifting Line Equation - Integro-Differential Form.	102
3.6.4	Elliptical Loading and Elliptical Wing Under Lifting Line Assumptions and Linear Theory.	103
3.6.5	Numerical Implementation of the Method - Sample Code	105

41.9.4	Problems Introduced by Remeshing	531
41.10	Subgrid-Scale Models - LES - Turbulence	532
41.11	Accuracy of Vortex Methods, Guidelines, Diagnostics and Possible Improvements	533
41.11.1	Guidelines and Diagnostics for General Vortex Methods	533
41.11.2	Boundary Elements - Guidelines and Diagnostics	535
41.11.3	Particle Methods - Convergence	536
41.11.4	Application to the Inviscid Vortex Patch	537
	References	539
42	Particularities of Vortex Particle Methods	545
42.1	Particle Approximation and Lagrangian Methods	545
42.1.1	Notion of Vortex Blob	545
42.1.2	Particle Approximation	545
42.1.3	Dynamics of Lagrangian Methods	546
42.1.4	Incompressible Vortex Particle Methods	547
42.2	Stretching Term - Different Schemes	548
42.3	Divergence of the Vorticity Field	549
42.3.1	Minimizing the Error Growth	549
42.3.2	Corrections	550
42.3.3	Criteria for Correction	550
	References	551

43	Numerical Implementation of Vortex Methods	553
43.1	Interpolation Method Required for Grid-Based Methods	553
43.1.1	Interpolation in Vortex Methods	553
43.1.2	Concept of Interpolation	554
43.1.3	Interpolation to Grid (Projection, Gridding, Assignment, Particle-to-Mesh)	556
43.1.4	Interpolation from Grid (Mesh-to-Particle)	557
43.2	Tree-Codes and Fast Multipole Method	558
43.2.1	Tree-Based Method	558
43.2.2	Tree-Based Method - Coefficients up to Order 2	560
43.3	Poisson Solvers	561
43.4	Numerical Integration Schemes	562
43.4.1	Expression of the Different Schemes	562
43.4.2	Example of Application to the Inviscid Patch	563
43.4.3	Work Presented by Leishman	564
43.5	Vorticity Splitting and Merging Schemes	564
43.6	Conversion from Segments to Particles	566
43.6.1	Canonical Examples for Validation	566
43.6.2	Representation of One Segment by One Particle	567
43.6.3	Representation Using Several Particles	567
43.6.4	Trailed and Shed Vorticity Behind a Wing	568
43.7	Distribution of Control Points	568
43.7.1	The Work of James - Chordwise Distribution	568
43.7.2	Cosine Spacing and Other References in the Topic	569
43.8	The 3/4 Chord Collocation Point	570
	References	571
44	OmniVor: An Example of Vortex Code Implementation	575
44.1	Introduction	575
44.2	Implementation and Features	576
44.3	Specific Configurations Used in Publications	584
	References	585
45	Vortex Code Validation and Illustration	587
45.1	Simple Validation of the Vortex Particle Method	587
45.2	Lifting Line	588
45.3	Lifting Surface	589
45.4	Thick Bodies	590
45.5	Unit-Tests	591
45.6	Further Validation	592
	References	592

Appendix A: Complements on the Right Cylindrical Model and the Effect of Wake Rotation	595
Appendix B: From Poisson's Equation to the Biot–Savart Law in an Unbounded Domain	607
Appendix C: Useful Mathematical Relations	617
Index	629
