<b>1</b>	<b>Introduction to ASReml Software</b>	<b>1</b>
	Why ASReml?	2
	ASReml Workflow	2
	Setting Up ConTEXT Editor to Create and Execute	
	ASReml Command Files	3
	Starting with ASReml	3
	Data Field Definitions	8
	Transformation of Response Variables	9
	Data File and Job Control Qualifiers	10
	Specifying Terms in the Linear Model	14
	Variance Header Line and Random Model Terms	15
	Running ASReml	17
	ASReml Output Files	18
	Tabulation	26
	Prediction	27
	Processing Multiple Analyses with One Command File	29
	Linear Combinations of Variance Components	37
	A Brief Introduction to ASReml-R	39
	Data Set Used in the Analysis	40
	Fitting a Model in ASReml-R	43
<b>2</b>	<b>A Review of Linear Mixed Models</b>	<b>49</b>
	Mixed Models Compared to Traditional ANOVA	50
	Balanced Data: ANOVA with SAS Proc GLM	51
	Balanced Data: ANOVA with R	53
	Balanced Data: ANOVA with ASReml	55
	Balanced Data: Mixed Models Analysis with SAS Proc MIXED	57
	Balanced Data: Mixed Models Analysis with R	57
	Balanced Data: Mixed Models Analysis with ASReml	59
	Hypothesis Testing with Mixed Models	60
	Prediction: BLUE and BLUP	61
	Unbalanced Data	62
	ANOVA with SAS Proc GLM	62
	Unbalanced Data: Mixed Models Analysis with SAS	65
	Mixed Models in a Nutshell: Theory and Concepts	74
	The Model	74
	Fixed and Random Effects	74
	Expectations and Variance-Covariance for the Random Effects	76
	A Trivial Example: Daughters Lactation Yield	77
	Solving the Model	79
	The Mixed Model Equations	80

Estimability in Models with Multiple Fixed Effects . . . . .	81
Standard Errors and Accuracy of the Estimates . . . . .	84
A Brief Note on REML . . . . .	85
<b>3 Variance Modeling in ASReml . . . . .</b>	<b>87</b>
Variance Model Specifications . . . . .	88
Gamma and Sigma Parameterization in ASReml . . . . .	88
Homogenous Variance Models . . . . .	89
Heterogeneous R Variance Structures . . . . .	91
Heterogeneous G Variance Structures . . . . .	98
Initial Values . . . . .	102
<b>4 Breeding Values . . . . .</b>	<b>107</b>
Family Selection . . . . .	108
Causal Variance Components and Resemblance . . . . .	109
The GCA (Family) Model . . . . .	112
Analysis of Half-Sib Progeny Data Using GCA Model . . . . .	113
Variance Components and Their Linear Combinations . . . . .	115
Variation Among Family Means . . . . .	117
Within-Family Variation . . . . .	118
The Accuracy of Breeding Values . . . . .	120
Individual (“Animal”) Model . . . . .	121
Animal Model for Half-Sib Family Data . . . . .	122
The Animal Model with Deep Pedigrees and Maternal Effects . . . . .	127
Accounting for Genetic Groups Effect in Predictions . . . . .	134
Treating Genetic Groups as a Fixed Effect in GCA model . . . . .	134
Fitting Genetic Groups as Pedigree Information in Individual Model . . . . .	136
Effect of Self-Fertilization on Variance Components . . . . .	138
<b>5 Genetic Values . . . . .</b>	<b>141</b>
Specific Combining Ability (SCA) and Genetic Values . . . . .	142
Diallel Mating Designs . . . . .	142
Diallel Example . . . . .	144
Specific Combining Ability (SCA) Effect . . . . .	149
Reciprocal Effects . . . . .	150
Interpretation of Observed Variances from Diallels . . . . .	152
Linear Combinations of Variances from Diallels . . . . .	153
Factorial Mating Designs . . . . .	156
Analysis of Cloned Progeny Test Data . . . . .	158
<b>6 Multivariate Models . . . . .</b>	<b>165</b>
Introduction . . . . .	166
Some Theory . . . . .	166
The Linear Mixed Model for Multivariate Models . . . . .	167
Maize RILs Multivariate Model . . . . .	171
Linear Combinations of Variances and Covariances . . . . .	184
Predictions from Multivariate Models . . . . .	191
The Animal Model in a Multivariate Re-visitation . . . . .	193
<b>7 Spatial Analysis . . . . .</b>	<b>203</b>
Background . . . . .	204
Modeling Spatial Effects . . . . .	204
Variance-Covariance Matrix of Residuals . . . . .	205
Model Selection . . . . .	208
Example of Spatial Analyses of Field Trial Data . . . . .	209
Heritability Estimate from Spatial Model . . . . .	219

<b>8</b>	<b>Multi Environmental Trials</b>	227
	Introduction	228
	MET: General Approach and Considerations	228
	Statistical Models	230
	Formulation of FA models in ASReml	233
	Example: Analysis of Pine Polymix MET Data	235
	Summarize Data for Each Site	235
	Analyze Each Site Separately to Obtain Variances	236
	Model 3: Cross-Classified ANOVA	237
	Model 4: Compound Symmetry	238
	Model 5: Heterogeneous Residuals and Block Effects	239
	Model 6: CORUH G Structure	239
	Models 7 and 8: US and CORGH Structures	240
	Model 9: FA1 Covariance Structure	240
	Model 10: FA1 Correlation Structure	242
	Model 11: XFA1 Structure	245
	Model 12: XFA2 Structure	246
	Model 13: XFA3 Structure	248
	MET Models with ASReml-R	248
	Genetic Prediction with FA Models	249
	Estimating Heritability and Reliability from FA Models	254
	Biplots from FA Models	262
<b>9</b>	<b>Exploratory Marker Data Analysis</b>	263
	Marker Data and Some Definitions	264
	Allele Frequencies	266
	Hardy-Weinberg Equilibrium (HWE)	266
	Polymorphism Information Content	267
	Heterozygosity	267
	Linkage Disequilibrium (LD)	267
	Software and Tools for Processing Marker Data	269
	Introduction to the <i>Synbreed</i> Package	269
	Maritime Pine Data Example	270
	Recoding Loci and Imputing Missing Genotypes	276
	Genetics Package for Estimating Population Parameters	277
	Data Summary and Visualization	281
	Genetic Map	281
	Pairwise Linkage Disequilibrium	282
<b>10</b>	<b>Imputing Missing Genotypes</b>	287
	Introduction	288
	The Idea Behind Imputation	289
	Pedigree Free Imputation	289
	Imputation from Densely Genotyped Reference Panel to Individuals Genotyped at Lower Density	292
	Imputation Without a Reference Panel	304
	Imputation with the <i>Synbreed</i> Package	306
<b>11</b>	<b>Genomic Relationships and GBLUP</b>	311
	Realized Genomic Relationships	312
	Calculation of G Matrices	319
	Genomic BLUP	324
	GBLUP with the <i>Synbreed</i> Package	327
	Cross-Validation	336
	GBLUP with Replicated Family Data in ASReml	343
	Blended Genetic Relationships	350
	Example Calculation of H Matrix	351
