Part I Background

1	Vector Fields and Ordinary Differential Equations	3
1.1	Introduction	3
1.2	Curves and Surfaces in \mathbb{R}^n	4
1.2.1	Cartesian Products, Affine Spaces	4
1.2.2	Curves in \mathbb{R}^n	6
1.2.3	Surfaces in \mathbb{R}^3	8
1.3	The Divergence Theorem	9
1.3.1	The Divergence of a Vector Field	9
1.3.2	The Flux of a Vector Field over an Orientable Surface	10
1.3.3	Statement of the Theorem	11
1.3.4	A Particular Case	11
1.4	Ordinary Differential Equations	12
1.4.1	Vector Fields as Differential Equations	12
1.4.2	Geometry Versus Analysis	13
1.4.3	An Example	14
1.4.4	Autonomous and Non-autonomous Systems	16
1.4.5	Higher-Order Equations	17
1.4.6	First Integrals and Conserved Quantities	18
1.4.7	Existence and Uniqueness	21
1.4.8	Food for Thought	22
	References	24
2	Partial Differential Equations in Engineering	25
2.1	Introduction	25
2.2	What is a Partial Differential Equation?	26
2.3	Balance Laws	27
2.3.1	The Generic Balance Equation	28

2.3.2	The Case of Only One Spatial Dimension	31
2.3.3	The Need for Constitutive Laws	34
2.4	Examples of PDEs in Engineering	36
2.4.1	Traffic Flow	36
2.4.2	Diffusion	37
2.4.3	Longitudinal Waves in an Elastic Bar	38
2.4.4	Solitons	39
2.4.5	Time-Independent Phenomena	40
2.4.6	Continuum Mechanics	41
	References	47

Part II The First-Order Equation

3	The Single First-Order Quasi-linear PDE	51
3.1	Introduction	51
3.2	Quasi-linear Equation in Two Independent Variables	53
3.3	Building Solutions from Characteristics	56
3.3.1	A Fundamental Lemma	56
3.3.2	Corollaries of the Fundamental Lemma	57
3.3.3	The Cauchy Problem	58
3.3.4	What Else Can Go Wrong?	60
3.4	Particular Cases and Examples	61
3.4.1	Homogeneous Linear Equation	61
3.4.2	Non-homogeneous Linear Equation	62
3.4.3	Quasi-linear Equation	64
3.5	A Computer Program	71
	References	74
4	Shock Waves	75
4.1	The Way Out	75
4.2	Generalized Solutions	76
4.3	A Detailed Example	78
4.4	Discontinuous Initial Conditions	82
4.4.1	Shock Waves	82
4.4.2	Rarefaction Waves	85
	References	88
5	The Genuinely Nonlinear First-Order Equation	89
5.1	Introduction	89
5.2	The Monge Cone Field	90
5.3	The Characteristic Directions	92
5.4	Recapitulation	96
5.5	The Cauchy Problem	98
5.6	An Example	99
5.7	More Than Two Independent Variables	101

5.7.1	Quasi-linear Equations	101
5.7.2	Non-linear Equations	104
5.8	Application to Hamiltonian Systems	105
5.8.1	Hamiltonian Systems	105
5.8.2	Reduced Form of a First-Order PDE	106
5.8.3	The Hamilton–Jacobi Equation	107
5.8.4	An Example	108
	References	112

Part III Classification of Equations and Systems

6	The Second-Order Quasi-linear Equation	115
6.1	Introduction	115
6.2	The First-Order PDE Revisited	117
6.3	The Second-Order Case	118
6.4	Propagation of Weak Singularities	121
6.4.1	Hadamard’s Lemma and Its Consequences	121
6.4.2	Weak Singularities	123
6.4.3	Growth and Decay	125
6.5	Normal Forms	127
	References	130
7	Systems of Equations	131
7.1	Systems of First-Order Equations	131
7.1.1	Characteristic Directions	131
7.1.2	Weak Singularities	133
7.1.3	Strong Singularities in Linear Systems	134
7.1.4	An Application to the Theory of Beams	135
7.1.5	Systems with Several Independent Variables	137
7.2	Systems of Second-Order Equations	140
7.2.1	Characteristic Manifolds	140
7.2.2	Variation of the Wave Amplitude	142
7.2.3	The Timoshenko Beam Revisited	144
7.2.4	Air Acoustics	147
7.2.5	Elastic Waves	150
	References	153

Part IV Paradigmatic Equations

8	The One-Dimensional Wave Equation	157
8.1	The Vibrating String	157
8.2	Hyperbolicity and Characteristics	158
8.3	The d’Alembert Solution	159
8.4	The Infinite String	160
8.5	The Semi-infinite String	163

8.5.1	D'Alembert Solution	163
8.5.2	Interpretation in Terms of Characteristics	165
8.5.3	Extension of Initial Data	167
8.6	The Finite String.	168
8.6.1	Solution.	168
8.6.2	Uniqueness and Stability	171
8.6.3	Time Periodicity	173
8.7	Moving Boundaries and Growth.	174
8.8	Controlling the Slinky?.	175
8.9	Source Terms and Duhamel's Principle	177
	References.	182
9	Standing Waves and Separation of Variables	183
9.1	Introduction	183
9.2	A Short Review of the Discrete Case	184
9.3	Shape-Preserving Motions of the Vibrating String	189
9.4	Solving Initial-Boundary Value Problems by Separation of Variables	192
9.5	Shape-Preserving Motions of More General Continuous Systems	198
9.5.1	String with Variable Properties	198
9.5.2	Beam Vibrations	201
9.5.3	The Vibrating Membrane.	203
	References.	208
10	The Diffusion Equation	209
10.1	Physical Considerations	209
10.1.1	Diffusion of a Pollutant.	209
10.1.2	Conduction of Heat.	212
10.2	General Remarks on the Diffusion Equation.	214
10.3	Separating Variables.	215
10.4	The Maximum–Minimum Theorem and Its Consequences	216
10.5	The Finite Rod	219
10.6	Non-homogeneous Problems.	221
10.7	The Infinite Rod	223
10.8	The Fourier Series and the Fourier Integral	225
10.9	Solution of the Cauchy Problem.	228
10.10	Generalized Functions.	230
10.11	Inhomogeneous Problems and Duhamel's Principle	234
	References.	238
11	The Laplace Equation.	239
11.1	Introduction	239
11.2	Green's Theorem and the Dirichlet and Neumann Problems.	240
11.3	The Maximum-Minimum Principle.	243

11.4	The Fundamental Solutions	244
11.5	Green’s Functions.	246
11.6	The Mean-Value Theorem	248
11.7	Green’s Function for the Circle and the Sphere	249
	References.	252
