Part I Basic Concepts

1	Introduction	3
1.1	Motivation	3
1.2	Historical Perspective	4
1.3	Modern Approaches	5
	References	9
2	Polarized Light	11
2.1	Polarization of Coherent Electromagnetic Radiation	11
2.1.1	Maxwell's Theory of Electromagnetic Radiation	11
2.1.2	The Polarization Ellipse	13
2.1.3	Parameterization of Polarization: Stokes Vectors	14
2.1.4	The Principal Frame	16
2.1.5	The Poincaré Sphere	17
2.2	Electric Dipole Radiation from Atomic Transitions	17
2.2.1	Coordinate Frames, Scattering Amplitudes, and Stokes Parameters	17
2.2.2	Atomic State Parameters, Electron Charge Clouds, and Their Experimental Determination	23
2.2.3	The Incoherent Case with Conservation of Atomic Reflection Symmetry	27
2.2.4	The Incoherent Case Without Conservation of Atomic Reflection Symmetry	28
2.2.5	Summary of Parameterization for P-State Excitation	31
2.2.6	Extension to Coherently Excited Stark Manifolds	31
	Exercises	34
	References	35

3	Polarized Electrons	37
3.1	The Dirac Equation	37
3.2	Pure Spin States: State Vector Description	38
3.3	Mixed Spin States: Density Matrix Description	39
3.4	Experimental Determination of Electron Polarization	41
	Exercises	43
	References	43
4	Experimental Geometries and Approaches	45
4.1	Integrated Cross Sections and Alignment	45
4.1.1	Schematic Setup for Angle-Integrated Measurements	45
4.1.2	Setups with Results for Electron Impact and Atom Impact Excitation	46
4.2	Differential Cross Sections	49
4.2.1	Schematic Setups for Angle-Differential Measurements	49
4.2.2	A Setup with Results for Electron–Atom Collisions	50
4.2.3	The Magnetic Angle Changer	51
4.2.4	Setups with Results for Electron Impact Ionization	51
4.2.5	A Setup with Results for Atom Impact Excitation	54
4.3	Planar Scattering Symmetry: Alignment and Orientation Parameters	55
4.3.1	Schematic Setups for Coherence and Correlation Analysis	55
4.3.2	Setups with Results for Electron Impact Excitation and De-excitation	57
4.3.3	Setups with Results for Atom Impact Excitation	60
4.4	Generalized STU Parameters for Electron Collisions	61
4.5	Generalized Stokes Parameters for Electron–Atom Collisions	63
4.6	Atom–Atom Collisions with Laser-Prepared Targets	67
	References	69
5	Density Matrices: Connection Between Experiment and Theory	71
5.1	Motivation	71
5.2	Scattering Amplitudes	72
5.2.1	Scattering Amplitudes in Different Coordinate Frames	72
5.2.2	Symmetry Properties	74
5.2.3	Scattering Amplitudes in the Non-relativistic Limit	75
5.3	Density Matrices	76

5.4	An Explicit Example: Generalized STU Parameters	78
5.4.1	Definition in Terms of Scattering Amplitudes	78
5.4.2	Exact Symmetry Relationships	80
5.4.3	An Approximate Symmetry: The Fine-Structure Effect	81
5.5	Irreducible Tensor Operators and State Multipoles	83
5.5.1	Basic Definitions	83
5.5.2	Coupled Systems	86
5.5.3	Time Evolution of State Multipoles: Quantum Beats	86
5.5.4	Time Integration over Quantum Beats	88
5.6	Stokes Parameters	90
5.7	Atomic and Photon Density Matrices for P-State Excitation . . .	91
	Exercises	93
	References	94
6	Computational Methods	97
6.1	Electron Versus Heavy-Particle Impact	97
6.2	Computational Methods for Electron Scattering	99
6.2.1	Potential Scattering	100
6.2.2	Perturbation Approaches	102
6.2.3	The Close-Coupling Expansion	105
6.2.4	Time-Dependent Approaches	110
6.2.5	Recent Developments	111
6.3	Computational Methods for Heavy-Particle Collisions	115
6.3.1	Semi-classical Approaches	115
6.3.2	Classical-Trajectory Monte-Carlo Approach	119
6.4	Visualization of Charge Clouds	120
	References	123

Part II Case Studies

7	Electron Impact Excitation	127
7.1	Angle-Integrated Stokes Parameters and Cross Sections	127
7.1.1	Excitation of the (6s6p) States in Hg	139
7.1.2	Excitation of Ions: $\text{Cd}^+ (^2\text{P}_{3/2})$	140
7.1.3	An Unresolved Mystery: Electron Impact Excitation of $(4s5s)^3\text{S}_1$ in Zn and $(6s7s)^3\text{S}_1$ in Hg	142
7.2	Angle-Differential Stokes and STU Parameters	144
7.2.1	Electron Impact Excitation of Helium	144
7.2.2	Electron Impact Excitation of Hydrogen, Lithium, and Sodium	165
7.2.3	Electron Impact Excitation of Heavy Noble Gases	180
7.2.4	Electron Impact Excitation of Mercury	184

7.2.5	Elastic Electron Scattering from Cesium.	200
7.2.6	Recent Developments in Electron Scattering from Cesium.	203
7.3	Conclusions	206
	References	207
8	Ion and Atom Impact Excitation.	213
8.1	Angle-Differential S→P, D Excitation and Transfer.	213
8.1.1	S→P, D Excitation in Mg^+ —and Li—Rare-Gas Systems.	214
8.1.2	S→P Transfer Excitation in B^{3+} —He, Ne Collisions	220
8.1.3	S→P Transfer in Small-Angle H^+ , Li^+ —Na (3s) Collisions	225
8.1.4	Vortex Formation in Antiproton—Atomic-Hydrogen Collisions	236
8.2	Angle-Integrated Alignment Studies Using Optically Prepared Targets	237
8.2.1	Alignment Effects in H^+ , Li^+ —Na (3p) Collisions . . .	238
8.2.2	Alignment Effects in He^{2+} —Na (3p) Collisions	245
8.3	Angle-Differential Studies Using Optically Prepared Targets . .	247
8.3.1	Level Populations in H^+ —Na (3p) → $\text{H} (n = 2, 3)$ — Na^+ Scattering.	247
8.3.2	Level Populations in Li^+ —Na (3p) → Li (2p)— Na^+ Scattering	256
8.3.3	Level Populations in He^+ —Na (3p) → He (2p)— Na^+ Scattering	259
8.4	Angle-Differential Studies Using Optically Prepared Targets and Optical Final-State Analysis	265
8.4.1	H^+ —Na (3p) → H (2p)— Na^+ Scattering Experiments	269
8.4.2	Li^+ —Na (3p) → Li (2p)— Na^+ Scattering Experiments	270
8.5	Reaction Microscope Studies: COLTRIMS with Alkali MOTs	276
8.5.1	Li^+ Capture from a Na (3s, 3p) MOT.	277
8.5.2	Na^+ Capture from a Rb (5p) MOT.	280
	References	282
9	Propensity Rules.	285
9.1	Orientation for S→P Impact Excitation by Electrons and Positrons	285
9.2	Orientation for S→P Impact Excitation by Protons and Antiprotons	289

9.3	Orientation for Excitation and De-Excitation by Electrons and Positrons	293
9.4	Principal Quantum Number Dependence of Orientation and Alignment Parameters	300
9.5	Spin-Dependent Propensities	304
9.6	Validity Limits of Propensity Rules	305
9.6.1	Electron Impact Excitation of Neon	306
9.6.2	Electron Impact Excitation of He(1s3d) ¹ D	307
	References	309
10	Impact Ionization	311
10.1	Ionization by Electron Impact	311
10.1.1	Angle-Integrated Studies	313
10.1.2	Angle-Differential Studies	316
10.1.3	Selected Developments Since 2001	322
10.2	Ionization by Heavy-Particle Impact: Reaction Microscope Studies with Optically Prepared Targets	327
10.3	Ionization with Excitation by Heavy-Particle Impact	330
10.3.1	Angle-Integrated Studies	331
10.3.2	Angle-Differential Studies	332
	References	334
11	Photo-Driven Processes	337
11.1	Introductory Remarks	337
11.2	Photoionization by Continuous Radiation	338
11.3	Photoionization by Short-Pulse Radiation	343
	References	348
12	Related Topics and Applications	351
12.1	Spin-Polarized Auger Electrons	351
12.2	Autoionization Anisotropies in Heavy-Particle Collisions	352
12.3	Collisions with Molecules	356
12.3.1	Electron Collisions with Molecules	356
12.3.2	Heavy-Particle Collisions with Molecules	362
12.4	Collisions with Surfaces and Foils	363
12.5	Polarization in Collisional Broadening and Redistribution	366
12.6	Alignment and Orientation Studies at Thermal Energies	373
12.6.1	Alignment Studies Involving an Optically Prepared Atom	373
12.6.2	Alignment and Orientation Studies Involving Two Optically Prepared Atoms	375
12.7	Plasma Polarization Spectroscopy	379

12.8	Spin-Polarized Beams for Nuclear and Particle Physics	383
12.9	Quantum Entanglement and Bell Correlation in Electron-Exchange Collisions.	385
	References	387
Part III Selection of Historical Papers (1925–1976)		
13	Introductory Summaries	393
