

Contents

1	General Remarks on Cellulosic Blends and Copolymers	1
	Yoshiyuki Nishio	
1.1	Introduction: In the Stream of Microcomposition Research	1
1.2	Terminology	3
1.2.1	Structural Parameters of Cellulose Derivatives	3
1.2.2	Miscibility of Polymer Blends	6
1.3	Methods for Miscibility Estimation	7
1.3.1	T_g Measurements	7
1.3.2	Spectroscopic Measurements	9
1.4	Supplementary Techniques	10
1.4.1	Dielectric Relaxation Spectroscopy	10
1.4.2	Fluorescence Polarization Measurement	12
1.5	Outline of the Monograph	13
	References	15
2	Cellulosic Polymer Blends 1: With Vinyl Polymers	17
	Kazuki Sugimura and Yoshiyuki Nishio	
2.1	Introduction	17
2.2	Cellulose Ester Blends with <i>N</i> -Vinyl Pyrrolidone Copolymer	19
2.2.1	Miscibility Maps as a Function of DS and Copolymer Composition	20
2.2.2	Intermolecular Interaction and Homogeneity Scale	27
2.2.3	Application to Functional Films	33

2.3	Other Prominent Systems of Cellulose Ester/Vinyl Polymer Blend	38
2.3.1	Enhancement of Thermomechanical Performance	39
2.3.2	Intimate Mixing of Cellulosic Blend by In Situ Polymerization of Vinyl Monomer	39
2.4	Concluding Remarks	40
	References.	41
3	Cellulosic Polymer Blends 2: With Aliphatic Polyesters.	45
	Ryosuke Kusumi and Yoshikuni Teramoto	
3.1	Introduction	45
3.2	Cellulose Ester Blends with Poly(ϵ -caprolactone).	47
3.2.1	Dependence of Miscibility on Alkyl Side-Chain Length and DS	47
3.2.2	Miscibility of Cellulose Mixed Ester Series	49
3.2.3	Miscibility Factors in CE/PCL Blends	50
3.2.4	Crystallization Behavior	51
3.2.5	Spherulite Growth Observation	55
3.3	Acylated Chitin Blends with PCL	56
3.3.1	Molecular Characterization of Acyl-Chs	57
3.3.2	Miscibility Maps of Acyl-Ch/PCL Blends and Comparison with CE Systems.	59
3.3.3	Availability as Cytocompatible Flexible Films	61
3.4	Concluding Remarks	68
	References.	69
4	Cellulosic Graft Copolymers.	75
	Yoshikuni Teramoto and Ryosuke Kusumi	
4.1	Introduction	75
4.2	Graft Copolymers with Aliphatic Polyester Side-Chains.	76
4.2.1	Synthesis and Molecular Characterization	77
4.2.2	Thermal Properties: General Transition Scheme	79
4.2.3	Thermal Treatment Effect on Development of Supramolecular Structures.	86
4.2.4	Molecular Dynamics Characterized by Various Relaxation Measurements	92
4.2.5	Tensile Properties and Orientation Characteristics of Films	99
4.2.6	Biodegradation Control.	101
4.3	Other Prominences Attained by ATRP: Synthesis and Selected Properties.	105
4.4	Conclusion and Prospect.	106
	References.	107

5 Cellulosic Fiber Produced by Melt Spinning	109
Yoshitaka Aranishi and Yoshiyuki Nishio	
5.1 Introduction	109
5.2 Strategy for Melt Spinning Process.	112
5.2.1 Thermoplasticization of Cellulose	112
5.2.2 Rheological Conditioning	115
5.3 Industrial Example of Success	116
5.3.1 Manufacturing Process	116
5.3.2 Flow Properties	117
5.4 Fiber and Textile Properties	119
5.4.1 General Properties for Clothing.	119
5.4.2 Shape Variation and Functional Diversity	121
5.5 Concluding Remarks	123
References.	124

Blends and Graft Copolymers of Cellulosics
Toward the Design and Development of Advanced Films
and Fibers

Nishio, Y.; Teramoto, Y.; Kusumi, R.; Sugimura, K.;
Aranishi, Y.

2017, XIII, 125 p. 71 illus., Softcover
