

Contents

1	Introduction	1
1.1	Example A: Sine-Gordon Effective Field	1
1.2	Example B: The Electromagnetic Field	7
1.3	Solutions of the Klein–Gordon Equation	12
	Exercises	17
2	The Euler–Lagrange Equations and Noether’s Theorem.	19
2.1	The Euler–Lagrange Equations	19
2.2	Noether’s Theorem	24
	Exercises	30
3	Scalar Fields	33
3.1	The Lorentz and Poincaré groups	33
3.2	The Real Scalar Field	38
3.3	The Complex Scalar Field	49
	Exercises	60
4	Vector Fields	63
4.1	The Abelian Gauge Field	64
4.2	Non-Abelian Gauge Fields	71
4.3	The Higgs Mechanism and a Massive Vector Field	80
	Exercises	82
5	Relativistic Spinor Fields	87
5.1	The Dirac Equation, $Spin(4)$ and $SL(2, C)$ Groups	87
5.2	The Dirac Field	94
5.3	The Weyl Fields	96
5.4	The Majorana Field	102
5.5	Anticommuting (Bi)Spinor Fields	104
	Exercises	108

6	The Quantum Theory of Free Fields	111
6.1	The Real Scalar Field	112
6.2	The Dirac Field	131
6.3	The Electromagnetic Field	144
	Exercises	149
7	Perturbative Expansion in the ϕ_4^4 Model	151
7.1	The Gell-Mann–Low Formula	152
7.2	The Generating Functional for Green’s Functions	161
7.3	Feynman Diagrams in Momentum Space	166
	Exercises	177
8	Renormalization	181
8.1	Ultraviolet Divergences	182
8.2	An Example	188
8.3	BPHZ Subtractions	195
8.4	Renormalization of the 2-Point Green’s Function	198
8.5	The Multiplicative Renormalization	203
	Exercises	206
9	The Renormalization Group	211
9.1	Renormalization Group Equations	211
9.2	The Running Coupling Constant	218
9.3	Dimensional Transmutation	223
	Exercises	224
10	Relativistic Invariance and the Spectral Decomposition	
	of $G^{(2)}$	225
10.1	Relativistic Invariance in QFT	226
10.2	The Spectral Decomposition of $G^{(2)}$	239
10.3	The Contribution of the Single Particle Sector	244
10.4	The Pole of the Perturbative $\tilde{G}^{(2)}$	249
	Exercises	251
11	Path Integrals in QFT	253
11.1	Path Integrals in Quantum Mechanics	253
11.2	The Path Integral for Bosonic Fields	262
11.3	The Path Integral for Fermionic Fields	267
	Exercises	272
12	The Perturbative Expansion for Non-Abelian Gauge Fields	275
12.1	The Faddeev–Popov–DeWitt Determinant	276
12.2	The Generating Functional for Green’s Functions	280
12.3	Feynman Diagrams	284
12.4	BRST Invariance and the Slavnov–Taylor Identities	288
	Exercises	292

13 The Simplest Supersymmetric Models	293
13.1 The Superalgebra	293
13.2 Supersymmetry Multiplets	295
13.3 Representation of Supersymmetry in a Space of Fields	297
13.4 The Superspace	303
13.5 The Wess–Zumino Model	307
13.6 More Advanced Topics	314
13.7 Notation and Conventions	318
Exercises	321
14 Anomalies	323
14.1 A Simple Example of an Anomaly	323
14.2 Anomalies and the Path Integral	337
Exercises	343
Appendix: Some Facts About Generalized Functions	345
Bibliography	349
Index	351

Lectures on Classical and Quantum Theory of Fields

Arodz, H.; Hadasz, L.

2017, XI, 353 p. 34 illus., Hardcover

ISBN: 978-3-319-55617-8
