Contents

Part I Biomedical Big Data

Extreme Observations in Biomedical Data 3
Concepción Arenas, Itziar Irigoien, Francesc Mestres, Claudio Toma, and Bru Cormand

An Ordinal Joint Model for Breast Cancer 9
Carmen Armero, Carles Forné, Montserrat Rué, Anabel Forte, Hector Perpiñán, Guadalupe Gómez, and Marisa Baré

Sample Size Impact on the Categorisation of Continuous Variables in Clinical Prediction 15
Irantzu Barrio, Inmaculada Arostegui, and María-Xosé Rodríguez-Álvarez

Integrative Analysis of Transcriptomics and Proteomics Data for the Characterization of Brain Tissue After Ischemic Stroke 21
Ferran Briansó, Teresa García-Berrocoso, Joan Montaner, and Alex Sánchez-Pla

Applying INAR-Hidden Markov Chains in the Analysis of Under-Reported Data 29
Amanda Fernández-Fontelo, Alejandra Cabaña, Pedro Puig, and David Moriña

Joint Modelling for Flexible Multivariate Longitudinal and Survival Data: Application in Orthotopic Liver Transplantation 35
Ipek Guler, Christel Faes, Carmen Cadarso-Suárez, and Francisco Gude

A Multi-state Model for the Progression to Osteopenia and Osteoporosis Among HIV-Infected Patients 41
Klaus Langohr, Nuria Pérez-Álvarez, Eugenia Negredo, Anna Bonjoch, Montserrat Rué, Ronald Geskus, and Guadalupe Gómez

Statistical Challenges for Human Microbiome Analysis 47
Javier Rivera-Pinto, Carla Estany, Roger Paredes, M.Luz Calle, Marc Noguera-Julián, and the MetaHIV-Pheno Study Group

Integrative Analysis to Select Genes Regulated by Methylation in a Cancer Colon Study 53
Alex Sánchez-Pla, M. Carme Ruíz de Villa, Francesc Carmona, Sarah Bazzoco, and Diego Arango del Corro

Topological Pathway Enrichment Analysis of Gene Expression in High Grade Serous Ovarian Cancer Reveals Tumor-Stoma Cross-Talk 59
Oana A. Zeleznik, Gerhard G. Thallinger, John Platig, and Aedín C. Culhane

Part II Statistics for Low Dose Radiation Research

Biological Dosimetry, Statistical Challenges: Biological Dosimetry After High-Dose Exposures to Ionizing Radiation 67
Joan Francesc Barquinero and Pere Puig

Heterogeneous Correlation of Multi-level Omics Data for the Consideration of Inter-tumoural Heterogeneity 71
Herbert Braselmann

Overview of Topics Related to Model Selection for Regression 77
Riccardo De Bin

Understanding Plaque Overlap Is Essential for Modelling Radiation Induced Atherosclerosis 83
Fieke Dekkers, Astrid Kloosterman, Teun van Dillen, Maud Briels, and Arjan van Dijk

On the Use of Random Effect Models for Radiation Biodosimetry 89
Jochen Einbeck, Elizabeth Ainsbury, Stephen Barnard, Maria Oliveira, Grainne Manning, Pere Puig, and Christophe Badie

Modelling of the Radiation Carcinogenesis: The Analytic and Stochastic Approaches 95
Krzysztof W. Fornalski, Ludwik Dobrzyński, and Joanna Reszczyńska

Bayesian Solutions to Biodosimetry Count Data Problems and Supporting Software 103
Manuel Higueras and Elizabeth A. Ainsbury

Empirical Assessment of Gene Expression Biomarkers for Radiation Exposure 109
Adetayo Kasim, Nolen Joy Perualila, and Ziv Shkedy

Poisson-Weighted Estimation by Discrete Kernel with Application to Radiation Biodosimetry 115
Célestin C. Kokonendji, Nabil Zougab, and Tristan Senga-Kiessé

R Implementation of the Excess Relative Rate Model: Applications to Radiation Epidemiology 121
David Moriña and Elisabeth Cardis

Uncertainty Considerations Following a Mechanistic Analysis of Lung Cancer Mortality 127
Ignacio Zaballa and Markus Eidemüller

Erratum to: Understanding Plaque Overlap Is Essential for Modelling Radiation Induced Atherosclerosis E1
Fieke Dekkers, Astrid Kloosterman, Teun van Dillen, Maud Briels, and Arjan van Dijk
