1	Adsorption and Doping as Methods for the Electronic Regulation Properties of Carbon Nanotubes	1
	Alexandr Saurov	
	References.	5
2	Thermodynamics and Kinetics of Adsorption and Doping of a Graphene Plane of Carbon nanotubes and Graphene	7
	Sergey Bulyarskiy and Alexandr S. Basaev	
2.1	The Equilibrium of Thermodynamic Systems.	8
2.2	Thermodynamic and Kinetic Approaches to the Description of Thermodynamic Systems	11
2.2.1	Kinetics Equations.	11
2.2.2	Solutions of Equations of Physical Kinetics	12
2.2.3	The Kinetic Coefficients	13
2.2.4	Kinetic Processes in Carbon Nanostructures	15
2.2.5	Role and Limits of the Thermodynamic Approach with Regard to the Process of Doping Carbon Nanostructures.	15
2.3	Description of Defect Formation in Crystals.	16
2.3.1	The Quasi-chemical Reaction Method.	16
2.3.2	The Gibbs Free Energy Search Minimum Method	19
2.4	The Thermodynamics of Physical Adsorption of Carbon Nanotubes and Graphene	19
2.4.1	Objects of Research: CNTs and Graphene.	20
2.4.2	Differences Between Physical and Chemical Adsorption.	20
2.4.3	The Conservation Law of Place Number.	22
2.4.4	The Laws of Conservation of Particle Number	23
2.4.5	Free Energy of the Systems.	23

2.5	The Thermodynamics of Doping and Chemical Adsorption	27
2.5.1	The Conservation Laws for the Number of Places	27
2.5.2	The Conservation Laws of Particle Number	28
2.5.3	The Conservation Law of Charge	28
2.6	Kinetics of Doping Carbon Nanotubes and Graphene.	33
2.7	Kinetics of the Desorption Process	35
2.8	The Thermodynamics and Kinetics of Chemical Vapor Deposition Growth of Carbon Nanotubes	38
2.8.1	Catalyst Nanoparticles	39
2.8.2	The Free Energy of the Particles	40
2.8.3	The Laws of Conservation for the Number of Sites and Particles	41
2.8.4	Calculation of the Cluster Size Distribution.	42
2.8.5	The Kinetics of the Growth of a Nanotube	46
2.8.6	Some Experimental Results	47
2.8.7	System of Kinetic Equations	48
2.9	Conclusion	54
	References.	55
3	Interaction of Hydrogen with a Graphene Plane of Carbon Nanotubes and Graphene	57
	Sergey Bulyarskiy, Alexandr S. Basaev and Darya A. Bogdanova	
3.1	Adsorption by Carbon Nanotubes as a Basis for Hydrogen Storage Technology	58
3.2	Quantum Mechanical Calculations of Carbon Nanotube Adsorptive Characteristics.	63
3.3	Modeling of Single Carbon Nanotube Properties for the Processes of Hydrogen Adsorption	65
3.4	Thermodynamic Evaluations for Limiting Hydrogen Adsorption by SWCNTs.	78
3.5	Hydrogen Desorption Kinetics (TGA)	83
3.6	Experimental Studies of Hydrogen Adsorption on SWCNTs	86
3.7	Modeling of a Nanotube with Stone–Wales Defects.	91
3.8	The Problem of Hydrogen Storage	93
3.9	Conclusion	96
	References.	96
4	Oxygen Interaction with Electronic Nanotubes.	103
	Sergey Bulyarskiy, Alexandr S. Basaev, Darya A. Bogdanova and Alexandr Pavlov	
4.1	Simulation of the Oxygen Interaction with Electronic Nanotubes.	103

4.2	The Characteristic Parameters of Oxygen Adsorption.	108
4.3	Conclusion	111
	References.	112
5	Nitrogen Interaction with Carbon Nanotubes: Adsorption and Doping	115
	Alexandr Saurov, Sergey Bulyarskiy, Darya A. Bogdanova and Alexandr Pavlov	
5.1	Nitrogen Arrangement on Carbon Nanotubes	116
5.2	Determination of Nitrogen Atom Configuration on the Graphene Plane of a Carbon Nanotube	119
5.3	Analysis of Atomic Configurations and Nitrogen Electronic States on Graphene Planes of CNTs by Quantum Mechanical Methods	122
5.4	Simulation of Nitrogen Chemisorption on Single-Wall Carbon Nanotubes	124
5.5	Nitrogen Chemisorption Simulation for Nanotubes with Stone-Wales Defects.	127
5.6	Thermodynamics of the Nitrogen Physical Adsorption Processes on Carbon Nanotubes	130
5.7	Thermodynamics of Carbon Nanotube Doping by Nitrogen	132
	5.7.1 The Laws of Conservation of Place Number.	135
	5.7.2 The Laws of Conservation of Particle Number	136
	5.7.3 The Law Charge Conservation	136
	5.7.4 Configuration Entropy of the System	136
5.8	Calculations of Doped Carbon Nanotube Conductance.	144
5.9	Analysis of Thermogravimetric Curves of Carbon Nanotubes, Doped by Nitrogen.	144
5.10	Calculation of Nitrogen Fugacity Under Plasmochemical Synthesis	148
	5.10.1 The Place Number Conservation Laws	150
	5.10.2 The Particles Number Conservation Laws.	150
	5.10.3 Charge Conservation Law	151
	5.10.4 Free Energy of the System	151
5.11	Analysis of X-Ray Photoelectron Spectra of Nitrogen Doped Carbon Nanotubes.	155
5.12	Applications of Nitrogen Doped Carbon Nanotubes.	158
	5.12.1 Improvement of Emissive Properties	158
	5.12.2 Electrodes for Ionic-Lithium Batteries.	159
5.13	Conclusion	160
	References.	160

6 Carbon Nanotube Doping by Acceptors. The p-n Junction Formation	171
Alexandr Saurov, Sergey Bulyarskiy and Alexandr Pavlov	
6.1 The Electronic Properties of Boron-Doped Nanotubes	171
6.2 Technology and Thermodynamics of Boron-Doped Carbon Nanotubes	172
6.3 Boron-Doped Carbon Nanotube Usage	173
6.4 The p - n Junction Forming Carbon Nanotubes	174
6.4.1 Features of p - n Junction Formation in Carbon Nanotubes by a Mutual Acceptors and Donor Doping	176
6.4.2 Carbon Nanotube Arrays as a Volume Crystal Analog	178
6.4.3 The Formation of a p - n Junction, Under Changing Temperatures, in a Nitrogen-Doped Carbon Nanotube Array	179
6.4.4 Doping Admixture Change During the Growth Process	179
6.4.5 Ionic Doping of an Array	179
6.4.6 Carbon Nanotube Array Oxidation Under Ultraviolet Irradiation	180
6.5 Summary	180
